

CAT Industry Member Reporting Scenarios

3/5/2021

Version 4.1

Table of Contents

Executive Summary	i
1. Introduction.....	1
2. Equity Scenarios and Examples	2
2.1. Order Route Scenarios	2
2.1.1. New Principal Order Routed to an Exchange and Executed	2
2.1.2. Customer Order Routed to an Exchange as Agent	3
2.1.3. Order Routed between Two Industry Members and Subsequently Executed on an Exchange.....	5
2.1.4. Order Routed to Multiple Destinations and Filled.....	8
2.1.5. Order Routed from an Exchange through a Routing Broker.....	13
2.1.6. Customer Order Facilitated via a Firm Agency Account Where a Route can be Directly Associated with the Customer Order	15
2.1.7. Order Routing via Smart Router Provided by another Industry Member	17
2.2. Trade Scenarios.....	20
2.2.1. Agency Order Cross.....	20
2.2.2. Internalized Trade against Proprietary Account	24
2.2.3. Order is Routed to and Executed by a Non-FINRA Member Firm, but the Routing FINRA Member Firm Must Report the Trade to the TRF.....	25
2.2.4. Industry Member Acting in a Mixed Capacity.....	29
2.3. Representative Order Scenarios.....	31
2.3.1. Fill of a Single Customer Order on a Riskless Principal Basis	31
2.3.2. Fill of Multiple Customer Orders on a Riskless Principal Basis.....	34
2.3.3. Single Customer Order Handled on a Riskless Principal Basis Where No Execution Occurs	39
2.3.4. Fill of a Single Customer Order on an Average Price Basis	40
2.3.5. Fill of a Single Customer Order from a Pre-Existing Principal Order	44
2.3.6. Customer Order is Received and Filled on a Net Basis	47
2.3.7. Fill of a Single Customer Order with Multiple Executions Print for Print.....	50
2.3.8. Firm Generates a Representative Order to Facilitate the Execution of another Representative Order	53
2.3.9. Fill of Multiple Customer Orders at an Average Price Using an Unlinked OMS/EMS ..	59
2.3.10. Fill of Multiple Customer Orders at an Average Price from an Existing Position	65
2.3.11. Fill of a Customer Order at a Guaranteed Volume Weighted Average Price	72
2.3.12. Fill of a Single Customer Order from Multiple Representative Orders	77
2.4. Internal Route Scenarios	83

2.4.1.	Customer Order Internally Routed to another Desk and Subsequently Executed Against a Firm Proprietary Account.....	83
2.4.2.	Customer Order Internally Routed to Multiple Desks and Subsequently Executed	86
2.4.3.	Internal Route and Execution, Leaves Quantity Routed Externally	90
2.4.4.	Order Received and Routed Manually, Electronically Captured at Subsequent Desk	94
2.4.5.	Industry Member Utilizes Multiple Systems at One Desk	96
2.4.6.	Order Internally Routed to another Desk and Subsequently Modified by a Customer	98
2.4.7.	Order Internally Routed to another Desk and Subsequently Modified by the Firm ...	107
2.4.8.	Order Internally Routed to Multiple Desks and Subsequently Cancelled by a Customer	113
2.5.	Order Modification Scenarios	118
2.5.1.	Customer Order and Modifications	119
2.5.2.	Customer Requested Modification of an Order Previously Routed to an Exchange.	123
2.5.3.	Customer Requested Modification of Order Previously Routed to another Industry Member	128
2.5.4.	System Driven Modification of Previously Routed Order	134
2.5.5.	Manual Route, Followed by an Electronic Modification	137
2.5.6.	Modification to an Order Previously Routed to an Exchange that requires the use of the Original Routed Order ID.....	142
2.5.7.	Modification of a Multi-day Order	146
2.5.8.	Modification of a Customer Order Resulting in a Modification to the Corresponding Representative Order	148
2.6.	Cancellation Scenarios	153
2.6.1.	Full cancellation of a Customer Order	153
2.6.2.	Partial Cancellation of an Order.....	156
2.6.3.	Partial Cancellation of a Partially Executed Order.....	158
2.6.4.	Industry Member Cancels an Order Previously Routed to Another Industry Member	164
2.6.5.	Industry Member Cancels a Route to Another Industry Member	168
2.6.6.	Firm Initiated Cancellation of a Customer Order	173
2.6.7.	Customer Requests to Cancel an Order that has Already Been Fully Executed	176
2.6.8.	Unsolicited Cancellation of a Customer Order by an Exchange	179
2.7.	ATS Reporting Scenarios	184
2.7.1.	ATS Cross with One Order on Each Side	184
2.7.2.	ATS Cross with Multiple Orders on One Side	189
2.7.3.	ATS Cross with Multiple Orders on Each Side.....	196
2.7.4.	Order Modification of a PEG Order.....	205

2.7.5.	Receipt of PEG Order, Followed by Change in NBBO with No Modification on the Order	209
2.7.6.	Crossing of PEG Order after a Change in NBBO with No Modification on the Order	212
2.7.7.	Display Modifications of a Display ATS	218
2.8.	OTC Reporting Scenarios	222
2.8.1.	Trade Negotiated over the Phone	222
2.8.2.	Trade Executed as a Result of an OTC Link ATS Message	225
2.8.3.	Trade Executed as a Result of an OTC Link ATS Counter Message	231
2.8.4.	Customer Order Executed as a Result of an OTC Link ATS Message	240
2.8.5.	Representative Order Executed as a Result of an OTC Link Message	247
2.8.6.	Fill of a Customer Order at a Previously Displayed Quote	254
2.8.7.	OTC Link Messages Directed by an OTC Link ATS Subscriber to a Global OTC Quote 262	
2.9.	Foreign Scenarios	266
2.9.1.	Route to a Foreign Broker-Dealer	266
2.9.2.	Customer Order is Routed to a Foreign Affiliate, and the Foreign Affiliate Executes the Order on a Net Basis	270
2.9.3.	Customer Order is Routed to a Foreign Broker-Dealer and Executed on a Riskless Principal Basis	272
2.9.4.	Industry Member Routes an Order in an OTC Equity Symbol of a Foreign Security to Another Industry Member with Discretion on Where to Execute	276
2.9.5.	Industry Member Routes an Order in an OTC Equity Symbol of a Foreign Security to Another Industry Member with Instructions to Execute on a Foreign Market	278
2.10.	Electronic Duplicate Scenarios	281
2.10.1.	Manual Order Route Followed by Electronic Route, Merged Event	281
2.10.2.	Manual Order Route, Electronic Duplicate Order	284
2.10.3.	Manual Order, One Side Reports Merged Event	287
2.11.	Child Order Scenarios	291
2.11.1.	Industry Member Creates Child Orders and Routes	291
2.11.2.	Industry Member Creates Multiple Branches of Child Orders	296
2.11.3.	Industry Member Creates Child Orders then Cancels the Parent order	303
2.11.4.	Industry Member Generates a Representative Order then Creates Child Orders	306
2.11.5.	Industry Member a Creates Child Order then Generates a Representative Order	311
2.12.	Proprietary Order Scenarios	317
2.12.1.	Unsolicited Cancellation of a Proprietary Order by an Exchange	317
2.12.2.	Industry Member Cancels a Proprietary Order that has Already Been Executed	323
2.12.3.	Industry Member Cancels a Proprietary Order Previously Routed to an Exchange ..	326

2.13. Clearing Firm Scenarios	329
2.13.1. Order Routed and Executed via a Clearing Firm	329
2.13.2. Direct Order Routing via a Clearing Firm's System.....	331
2.13.3. Order Routing via an Algorithm Provided by the Clearing Firm	333
2.14. Fractional Share Scenarios	336
2.14.1. Industry Member Liquidates Customer Position by Routing Away the Whole Share Quantity and Internalizing the Fractional Share	336
2.14.2. Introducing Firm Routes the Position to the Clearing Firm.....	338
2.14.3. Introducing Firm Routes the Whole Share Quantity to Another Industry Member and Routes the Fractional Share to the Clearing Firm	343
2.14.4. Clearing Firm Liquidates a Fractional Share after an ACAT or Account Closure Request	348
2.14.5. Dividend Reinvestment.....	349
2.15. Stop and Conditional Order Scenarios	355
2.15.1. Stop Order	355
2.15.2. Stop on Quote Order	359
2.15.3. Trailing Stop Order	362
2.15.4. Stop Stock Order	366
2.15.5. Stop Price is Based on Underlying Condition.....	367
2.15.6. Order Contingent on Spread Condition	371
2.16. RFQ and Solicitation Response Scenarios.....	377
2.16.1. Response to RFQ is Sent Electronically and is Executed by the Solicitor	377
2.16.2. Response to RFQ is Sent Through an RFQ Platform, and the Solicitor Routes the Customer Order to the Winning Bidder	385
2.16.3. Response to RFQ is Sent Electronically and Further Action is Required.....	388
2.16.4. Non-CAT Reporting Firm Issues an RFQ and Sends an Order to the Winning Bidder Who is a CAT Reporting Industry Member	393
2.17. Additional Reporting Scenarios.....	395
2.17.1. GTC Order Routed to Exchange, Modified by Customer	395
2.17.2. Retired Scenario	400
2.17.3. Retired Scenario	400
2.17.4. Order Fulfillment Amendment.....	400
2.18. JSON and CSV Examples	402
2.18.1. JSON Representation.....	402
2.18.2. CSV Representation	403
3. Option Scenarios and Examples	405
3.1. Option Order Origination and Route Scenarios	405

3.1.1.	New Principal Option Order Routed to Exchange and Executed	405
3.1.2.	Customer Option Order Routed to the Exchange and Executed	406
3.1.3.	Customer Option Order Electronically Routed between Two Industry Members and Subsequently Executed on an Exchange	408
3.1.4.	Retired Scenario	411
3.1.5.	Retired Scenario	411
3.2.	Fulfillment Scenarios	411
3.2.1.	Broker Receives Single Leg Electronic Orders, Creates a Combined Order and Routes the Combined Order to an Exchange	411
3.3.	Option Order Modification Scenarios.....	416
3.3.1.	Customer Requests the Modification of an Option Order that was Previously Routed to an Exchange	416
3.4.	Cancellation Scenarios	420
3.5.	Internal Route Scenarios	420
3.5.1.	Customer Option Order Internally Routed Electronically	420
3.5.2.	Order is Routed Internally and Child Orders are Generated Prior to Routing	422
3.6.	Complex Order Scenarios	426
3.6.1.	Industry Member Receives and Routes an Exchange Defined Complex Option Order to be Executed on the Exchange	426
3.6.2.	Industry Member Receives a Complex Option Order Which is worked as Individual Single Order Legs in the Customer's Account	429
3.6.3.	Industry Member Receives a Complex Order Manually Followed by Individual FIX Messages for Each Leg.....	433
3.6.4.	Retired Scenario	437
3.7.	RFQ and Solicitation Response Scenarios.....	438
3.7.1.	Retired Scenario	438
3.7.2.	Retired Scenario	438
3.7.3.	Response to RFQ is Sent Through an RFQ Platform operated by a Broker-Dealer...	438
3.7.4.	Industry Member Receives a Customer Order and is Only Able to Pair a Portion of the Order.....	445
3.7.5.	Floor Broker Solicits the Contra Side of a Multi-Leg Order and Routes the Equity Leg as a Pair to the Responder for Execution	450
3.8.	Additional Options Reporting Scenarios	460
3.8.1.	Response to an Exchange Auction	460
4.	Error Account Scenarios	463
4.1.1.	Industry Member Purchases the Wrong Security for a Customer/Client in Error	463

4.1.2.	Customer/Client Places an Order in Error and the Industry Member Elects to Correct the Error as an Accommodation to the Customer/Client	469
4.1.3.	Price Adjustment Through the Execution of a New Trade.....	473
4.1.4.	Industry Member Enters the Incorrect Side on a Customer/Client Order in Error	477
4.1.5.	Industry Member Does Not Enter a Customer Order Until T+1	482
4.1.6.	Correction of a Trade Incorrectly Reported to a TRF/ADF/ORF	485
4.1.7.	Trade is Cancelled after TRF Rejection due to 'Price out of Range'	488
5.	FDID Scenarios	492
5.1.1.	An Order is Received from a New Customer/Client and an Account Number is not Finalized Until a Later Date	492
5.1.2.	Order is Entered in the Wrong Account.....	494
5.1.3.	Customer Requests a Change in FDID Prior to Allocation	497
6.	Allocation Scenarios	501
6.1.	Allocation Scenarios	501
6.1.1.	Order is Booked Directly in a Customer Account at a Self-Clearing Broker-Dealer ..	501
6.1.2.	Order Originated by Registered Rep with Discretion Over Multiple Customer Accounts at a Self-Clearing Broker-Dealer	503
6.1.3.	DVP Allocations by a Self-Clearing Broker-Dealer to Institutional Customer Accounts Held at a Different Firm	506
6.1.4.	Order is Booked Directly in a Customer Account at an Introducing Broker.....	510
6.1.5.	DVP Allocations by a Clearing Firm of a Non-Clearing Executing Broker	514
6.2.	Allocation Amendment Scenarios	518
6.2.1.	Allocation is Amended After Initial Booking	518
6.2.2.	Allocation is Amended After Initial Booking then Cancelled.....	521
6.2.3.	Allocation is Amended then Reverted to the Original Terms and Conditions	527
7.	Error Correction Scenarios	530
7.1.	Correcting Ingestion Errors.....	530
7.1.1.	Correcting an Error using Action Type of 'RPR'	530
7.1.2.	Correcting an Error using the Action Type of 'COR'	531
7.1.3.	Firm Initiated Correction using Action Type of 'COR'	533
7.1.4.	File Deletion	534
7.1.5.	Deleting an Erroneous Record using Action Type of 'DEL'	535
7.1.6.	Deleting a record with no Error Feedback using Action Type of 'DEL'	537
7.1.7.	Correcting an Unreadable Event using Action Type of 'RPR'	538
7.2.	Correcting Linkage Discovery Errors.....	539
7.2.1.	Correcting an Intrafirm Linkage Error using Action Type of 'NEW'	539
7.2.2.	Correcting an Interfirm Linkage Error using Action Type of 'RPR'	540

7.2.3.	Correcting an Interfirm Linkage Error using Action Type of 'RPR'	542
7.2.4.	Correcting an Interfirm Linkage Error by Submitting the Missing Event	545
7.2.5.	Interfirm Linkage Warning for a Record Reported Early to CAT	548
8.	Floor Broker Scenarios.....	550
8.1.	NYSE Floor Broker Scenarios.....	550
8.1.1.	Order Routed to a Floor Broker Within the Same Broker-Dealer	550
8.1.2.	Order Routed to a Floor Broker at Another Broker-Dealer	553
8.1.3.	Floor Broker Routes an Order to a Floor Broker at Another Broker-Dealer	556
8.1.4.	Floor Broker Routes an Order to an Exchange Operated Algorithm.....	560
8.1.5.	Floor Broker Routes an Order to an Algorithm Operated by Another Broker-Dealer	564
8.2.	Cboe Floor Broker Scenarios.....	569
8.2.1.	Cboe Options Floor Broker Receives and Routes Order to Cboe Options Matching Engine for Further Handling and Execution.....	570
8.2.2.	Cboe Options Floor Broker Receives and Routes an Order to Exchange Matching Engine with Instructions to Return any Unexecuted Portion to the Floor Broker	573
8.2.3.	Industry Member Cancels a Route to a Cboe Options Floor Broker	577
8.2.4.	Cboe Options Floor Broker Manually Trades an Options Order in Open Outcry.....	580
8.2.5.	Cboe Options Floor Broker Manually Routes the Equity Leg of a Complex Option Order to another Industry Member	583

Executive Summary

This document is a companion document to the [CAT Reporting Technical Specifications for Industry Members \("Technical Specifications"\)](#) and is provided to assist Industry Members in implementing the reporting requirements laid out in the Technical Specifications. This document illustrates the specific reporting requirements for a variety of order handling execution scenarios for both equities and options Eligible Securities (as defined in the CAT NMS Plan). The scenarios illustrate the reporting requirements for Phase 2d.

The reporting scenarios are presented in a separate document from the Technical Specifications to provide the greatest flexibility in the ability to modify or add scenarios as new questions are presented and trading practices evolve. It is expected that changes and additions will be necessary for reporting scenarios with greater frequency than changes to the Technical Specifications that would be required when record format, field value changes, etc., occur. By maintaining a separate reporting scenarios document, reporting scenarios may be clarified or added without the need for a new version of the Technical Specifications.

This document contains interpretive guidance for Industry Member CAT Reporters with respect to how the Technical Specifications must be implemented. As such, any changes to this document are subject to the same review and approval process by the Operating Committee, pursuant to the CAT NMS Plan, as the Technical Specifications.

This document represents a phased approach to industry reporting. The Participants propose to seek a modification of the requirements of the CAT NMS Plan from the Securities and Exchange Commission ("Commission") to reflect the phased approach for the Industry Member CAT reporting described in the Technical Specifications. The proposed amendment will be subject to the approval of the Commission.

An archived version of the revision/change log detailing changes to previous versions of this document is available at www.catnmsplan.com.

Version	Date	Author	Description
4.0	2/5/21	Consolidated Audit Trail, LLC	Initial Publication for Phase 2d Updated executive summary language Updated modification/cancellation scenarios to add new events and requirements Updated allocation scenarios with new requirements Added <i>pairedOrderID</i> to relevant scenarios Moved Scenario 2.5.6 to 2.1.7 Retired scenarios 3.1.4 and 3.1.5

1. Introduction

This document is organized by product, and then within each product, by general handling scenario, such as order receipt and routing, order execution, etc.

For each scenario, a description of the scenario along with a diagram is provided and then is followed by specific Event Reports illustrating the correct values to be populated for each field. All examples are illustrative and do not identify all applicable fields.

2. Equity Scenarios and Examples

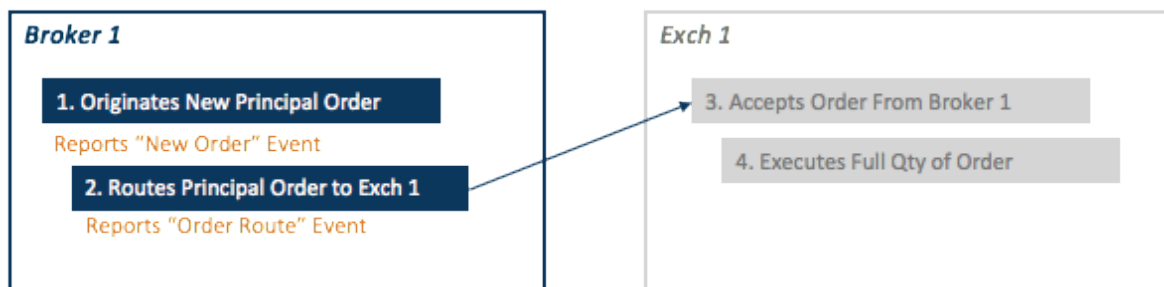

This section illustrates sample equity reporting scenarios. Each scenario will include a brief description including the reportable CAT events, a flow chart, and step-by-step reporting responsibilities. Refer to Section 4 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

2.1. Order Route Scenarios

This section illustrates the CAT reporting requirements when an order is received or originated, and is subsequently routed away from the firm for execution. Refer to Section 4.3 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

2.1.1. New Principal Order Routed to an Exchange and Executed

This scenario illustrates the CAT reporting requirements when an Industry Member originates a new principal order, routes the order to an exchange, and the order is executed on the exchange.

Industry Member Broker 1 is required to report:

- The origination of a principal order (New Order event)
- The route to an exchange (Order Route event)

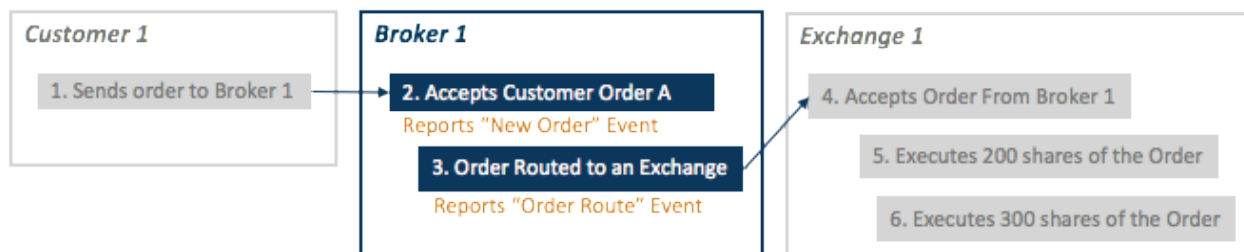

The execution will be reported by the exchange.

#	Step	Reported Event	Comments
1	Broker 1 originates a New Order	Broker 1 reports a New Order event type: MENO orderKeyDate: 20180501T000000 orderID: O12345 symbol: XYZ eventTimestamp: 20180501T153035.234456 manualFlag: false deptType: T side: B price: 10.00 quantity: 1000 orderType: LMT	

#	Step	Reported Event	Comments
		timeInForce: DAY=20180501 tradingSession: REG custDspIntrFlag: false firmDesignatedID: PRO001 accountHolderType: P affiliateFlag: false negotiatedTradeFlag: false representativeInd: N	
2	Broker 1 routes the order to Exch 1	<i>Broker 1 reports an Order Route event</i> type: MEOR orderKeyDate: 20180501T000000 orderID: O12345 symbol: XYZ eventTimestamp: 20180501T153035.234556 manualFlag: false senderIMID: 123:FRMA destination: EXCH1 destinationType: E routedOrderID: AO123 session: s5 side: B price: 10.00 quantity: 1000 orderType: LMT timeInForce: DAY=20180501 tradingSession: REG affiliateFlag: false isoInd: NA	Since Broker 1 is routing to a national securities exchange, <i>session</i> must be populated. The <i>senderIMID</i> field must be populated using the format <CRD>:<IMID> as described in the IM Technical Specifications in order to manage IMID conflicts.
3	Exch 1 accepts the order from Broker 1	<i>Exch 1 reports a Participant Order Accepted event</i>	
4	Exch 1 executes the full quantity of the order	<i>Exch 1 reports a Participant Trade event</i>	

2.1.2. Customer Order Routed to an Exchange as Agent

This scenario illustrates the CAT reporting requirements when an Industry Member routes a customer order to an exchange on an agency basis.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the customer order to the exchange (Order Route event)

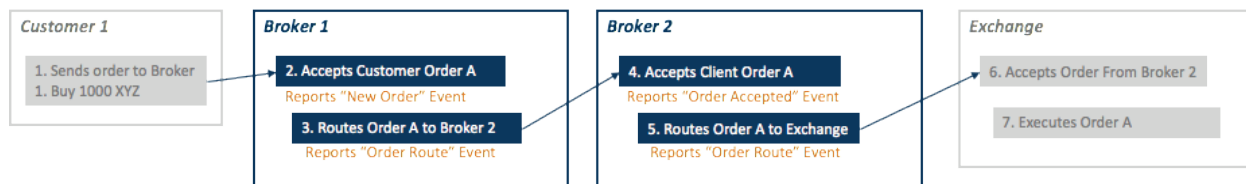

In this scenario, since the execution is passed back directly to the customer, no Order Fulfillment event is required to be reported.

#	Step	Reported Event	Comments
1	Customer sends a Buy order to Broker 1	NA	
2	Broker 1 accepts the customer order	<p><i>Broker 1 reports a New Order event</i></p> <p>type: MENO orderKeyDate: 20180417T000000 orderID: O11111 symbol: XYZ eventTimestamp: 20180417T153035.234456 manualFlag: false deptType: A side: B price: 10.00 quantity: 500 orderType: LMT timeInForce: DAY=20180417 tradingSession: REG custDspIntrFlag: false firmDesignatedID: INS001 accountHolderType: A affiliateFlag: false negotiatedTradeFlag: false representativeInd: N</p>	
3	Broker 1 routes the order to exchange EXCH1	<p>Broker 1 (IMID = FRMA) reports an Order Route event</p> <p>type: MEOR orderKeyDate: 20180417T000000</p>	<p>Since Broker 1 is routing to a national securities exchange, <i>session</i> must be populated.</p> <p>Since the values in the <i>handlingInstructions</i> field have not changed from the New Order to the</p>

#	Step	Reported Event	Comments
		orderID: O11111 symbol: XYZ eventTimestamp: 20180417T153035.234556 manualFlag: false senderIMID: 123:FRMA destination: EXCH1 destinationType: E routedOrderID: XYZO555 session: s5 side: B price: 10.00 quantity: 500 orderType: LMT timeInForce: DAY=20180417 tradingSession: REG affiliateFlag: false isoInd: NA handlingInstructions: RAR	Order Route, Broker 1 may use a value of "RAR" in the <i>handlingInstructions</i> field to indicate the order was "routed as received". Alternatively, firms have the option to re-state all <i>handlingInstructions</i> values. The <i>senderIMID</i> field must be populated using the format <CRD>:<IMID> as described in the IM Technical Specifications in order to manage IMID conflicts.
4	The Exchange accepts the order from Broker 1	EXCH1 reports a Participant Order Accepted event	
5	The Exchange executes a partial quantity (200) of the order	EXCH1 reports a Participant Trade event	
6	The Exchange executes a partial quantity (300) of the order	EXCH1 reports a Participant Trade event	

2.1.3. Order Routed between Two Industry Members and Subsequently Executed on an Exchange

This scenario illustrates the CAT reporting requirements when an order is routed from one Industry Member to another prior to execution on an Exchange.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the customer order to Broker 2 (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The route of Broker 1's order to the exchange (Order Route event)

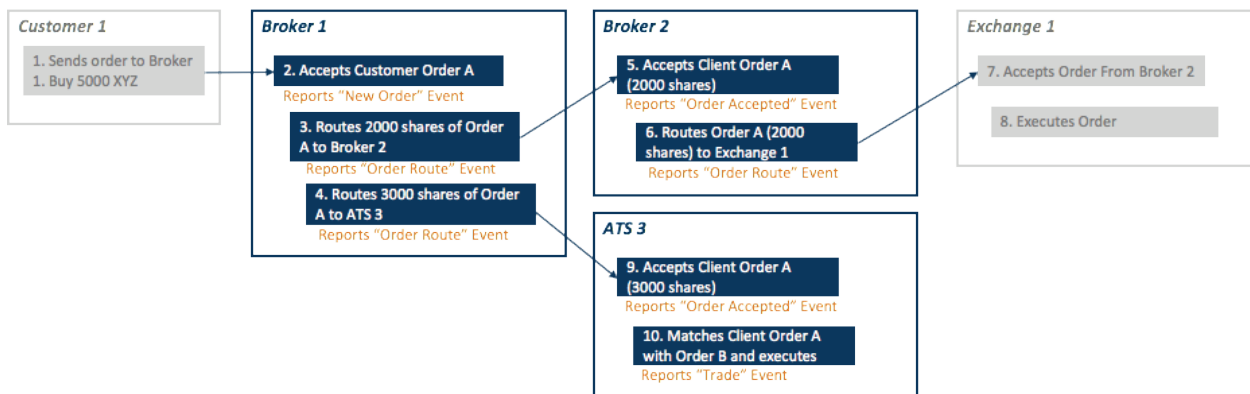

#	Step	Reported Event	Comments
1	Customer sends a Buy order to Broker 1	NA	
2	Broker 1 accepts the customer order	<p><i>Broker 1 reports a New Order event</i></p> <p> type: MENO orderKeyDate: 20180417T000000 orderID: O23456 symbol: XYZ eventTimestamp: 20180417T153030.234456 manualFlag: false deptType: A side: B price: 10.00 quantity: 1000 orderType: LMT timeInForce: DAY=20180417 tradingSession: REG custDspIntrFlag: false firmDesignatedID: INS001 accountHolderType: A affiliateFlag: false negotiatedTradeFlag: false representativeInd: N </p>

4	Broker 2 accepts the order from Broker 1	Broker 2 reports an Order Accepted event type: MEOA orderKeyDate: 20180417T000000 orderID: O34567 symbol: XYZ eventTimestamp: 20180417T153031.323556 manualFlag: false receiverIMID: 456:FRMB senderIMID: 123:FRMA senderType: F routedOrderID: AO222 affiliateFlag: false deptType: A side: B price: 10.00 quantity: 1000 orderType: LMT timeInForce: DAY=20180417 tradingSession: REG isoInd: NA custDsplntrFlag: false	Both the <i>senderIMID</i> and <i>receiverIMID</i> fields must be populated using the format <CRD>:<IMID> as described in the IM Technical Specifications in order to manage IMID conflicts.
5	Broker 2 routes the order to exchange EXCH1	Broker 2 reports an Order Route event type: MEOR orderKeyDate: 20180417T000000 orderID: O34567 symbol: XYZ eventTimestamp: 20180417T153031.324556 manualFlag: false senderIMID: 456:FRMB destination: EXCH1 destinationType: E routedOrderID: XYZO555 session: Es6:AA side: B price: 10.00	Since Broker 2 is routing the order to a national securities exchange, <i>session</i> must be populated. The <i>senderIMID</i> field must be populated using the format <CRD>:<IMID> as described in the IM Technical Specifications in order to manage IMID conflicts.

#	Step	Reported Event	Comments
		quantity: 1000 orderType: LMT timeInForce: DAY=20180417 tradingSession: REG affiliateFlag: false isoInd: NA	
6	The Exchange accepts the order from Broker 2	<i>EXCH1 reports a Participant Order Accepted event</i>	
7	The Exchange executes the order	<i>EXCH1 reports a Participant Trade event</i>	

2.1.4. Order Routed to Multiple Destinations and Filled

This scenario illustrates the CAT reporting requirements when a customer order is routed to multiple destinations. In this scenario, the order is partially routed to another Industry Member followed by an exchange, and is partially routed to an ATS.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route to Broker 2 (Order Route event)
- The route to ATS 3 (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The route to Exchange 1 (Order Route event)

Industry Member ATS 3 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The matching and execution of Broker 1's order (Trade event)

2.1.5. Order Routed from an Exchange through a Routing Broker

This scenario illustrates the CAT reporting requirements when an exchange routes an order through its affiliated Industry Member routing broker to another exchange.

Industry Member Broker 1 is required to report:

- The receipt of the order from Exchange 1 (Order Accepted event)
- The route of the order to Exchange 2 (Order Route event)

Exchange 1 is required to report the following as outlined in the [CAT Reporting Technical Specifications for Plan Participants](#):

- The route of the order to its routing broker (Participant Route event)
- The fill of the routed order (Participant Fill event)

Exchange 2 is required to report the following as outlined in the [CAT Reporting Technical Specifications for Plan Participants](#):

- The receipt of the order from Broker 1 (Participant Order Accepted event)
- Matching and execution of Broker 1's order (Participant Trade event)

In the event that Broker 1 routes the order to another broker-dealer as opposed to an exchange, Broker 1 would report an Order Accepted event and Order Route event as outlined above, with the Order Route event reflecting a route to another broker-dealer. The broker-dealer receiving the order from Broker 1 would report an Order Accepted event, along with any subsequent actions on the order.

#	Step	Reported Event	Comments

2.1.6. Customer Order Facilitated via a Firm Agency Account Where a Route can be Directly Associated with the Customer Order

This scenario illustrates the CAT reporting requirements when an Industry Member facilitates a single customer order via a firm agency account, commonly referred to as an “agency flip” scenario.

In this example, the Industry Member receives a customer order and then generates a firm order in its agency account, which is sent to the market. In this instance, the Industry Member's order handling and/or reporting system allows the route sent to the street to be directly associated with the customer order. Since the firm's system maintains the direct association between the customer order and the actions taken to facilitate that order, the firm is not required to report a separate representative order.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order from its agency account (Order Route event)

#	Step	Reported Event	Comments

7	The Exchange executes the remainder of the order (700 shares)	<i>EXCH1 reports a Participant Trade event</i>	

2.1.7. Order Routing via Smart Router Provided by another Industry Member

This scenario illustrates the CAT reporting requirements when an introducing firm receives a customer order and enters it directly to a Smart Router provided by another Industry Member. The Smart Router provided by the Industry Member does not need to report to CAT when all of the following conditions apply:

- 1) The Industry Member providing the order routing system has no discretion over the order once it is entered into the Industry Member's order-routing system. The order routing destination ("Destination Market Center") must either be directed by the originating Industry Member or be subject to the pre-determined algorithm of the routing system agreed to by the originating Industry Member. The Industry Member providing the order routing system would have no involvement relating to the routing of the order, other than providing the routing mechanism.
- 2) The originating Industry Member must have established a relationship with the Destination Market Center, including meeting any and all applicable requirements to route orders to that destination. The originating Industry Member understands that the Industry Member providing the order routing system has no involvement with respect to the order in any way, except for providing a routing mechanism. No pre-established relationship between the Industry Member providing the order routing system and the Destination Market Center would be necessary for the originating Industry Member to access the routing destination.
- 3) The Destination Market Center views the order as coming directly from the originating Industry Member, not the Industry Member providing the order routing system, for all purposes, but not limited to, CAT reporting, trade reporting, applicable fees, etc.

- 4) The originating Industry Member, rather than the member providing the order routing system, identifies itself as the routing firm for purposes for the SEC Rule 606 (formerly SEC Rule 11Ac1-6).

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order through a Smart Router (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The execution of the order (Trade event)

The Industry Member providing the order routing system is not required to report to CAT.

2.2. Trade Scenarios

This section illustrates the CAT reporting requirements when the execution of a customer/client order is required to be reported for public dissemination purposes, and the use a Trade event is required. Refer to Section 4.12 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

2.2.1. Agency Order Cross

This scenario illustrates the CAT reporting requirements when an Industry Member matches a Customer Buy order with a Sell order received from another Industry Member.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The receipt of the order from Broker 2 (Order Accepted event)
- The matching and execution of both orders (Trade event)

Industry Member Broker 2 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to Broker 1 (Order Route event)

Broker 1's customer order was fully executed, while Broker 2's customer order was partially executed.

2.2.2. Internalized Trade against Proprietary Account

This scenario illustrates the CAT reporting requirements when an Industry Member executes a customer order against its own proprietary account, and does not generate a new order to facilitate the execution of the customer order.

Industry Member Broker 1 is required to report:

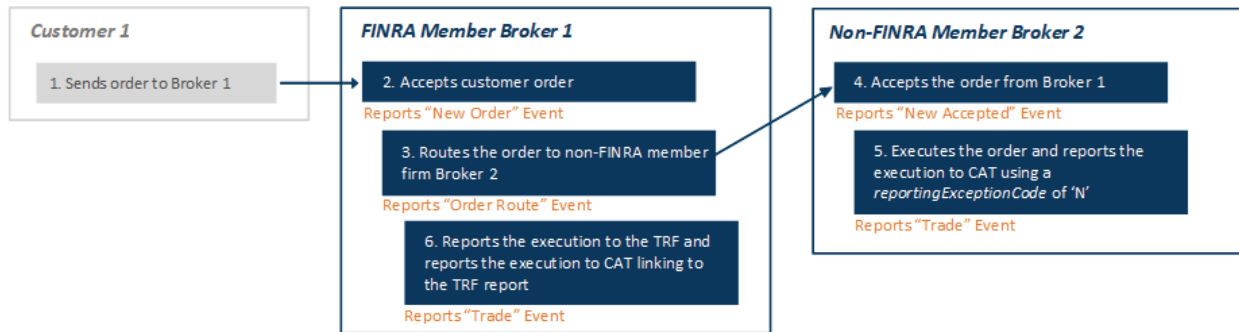

- The receipt of the customer order (New Order event)
- The execution of the customer order against its proprietary account (Trade event)

#	Step	Reported Event	Comments
1	Customer sends a Buy order to Broker 1	NA	
2	Broker 1 accepts the customer order	<i>Broker 1 reports a New Order event</i> type: MENO orderKeyDate: 20180416T000000 orderID: O12345 symbol: XYZ eventTimestamp: 20180416T153035.234456 manualFlag: false deptType: T side: B price: 10.00 quantity: 500 orderType: LMT timeInForce: DAY=20180416 tradingSession: REG	

#	Step	Reported Event	Comments
		custDsplntrFlag: false firmDesignatedID: INS001 accountHolderType: A affiliateFlag: false negotiatedTradeFlag: false representativeInd: N	
3	Broker 1 executes the order against its own proprietary account	<i>Broker 1 reports a Trade event</i> type: MEOT tradeKeyDate: 20180416T000000 tradeID: XYZ555 symbol: XYZ eventTimestamp: 20180416T153035.253456 manualFlag: false cancelFlag: false cancelTimestamp: quantity: 500 price: 10.00 capacity: P tapeTradeID: TRF123 marketCenterID: DN sideDetailsInd: NA buyDetails: orderKeyDate: 20180416T000000 orderID: O12345 side: B sellDetails: side: SL firmDesignatedID: PROP123 accountHolderType: P	The <i>buyDetails</i> reflect the details of customer order O12345. The <i>sellDetails</i> capture the FDID of the firm proprietary account from which the customer order was filled.

2.2.3. Order is Routed to and Executed by a Non-FINRA Member Firm, but the Routing FINRA Member Firm Must Report the Trade to the TRF

This scenario illustrates the CAT reporting requirements when a FINRA member firm receives an order and routes the order to a non-FINRA member firm, who executes the order. In this scenario, both parties will be required to report the order to CAT. Although the non-FINRA member firm executed the trade, the FINRA member has an obligation to report the trade to the TRF. In the TRF report, the FINRA member firm will be identified as the executing firm on the trade report with a blank contra, and the non-FINRA member will be unable to link to the trade report.

FINRA Member Broker 1 is required to report:

- The receipt of the order (New Order event)
- The route of the order to non-FINRA Member Broker 2 (Order Route event)
- The execution of the order (one-sided Trade event linking to the TRF report with a *sideDetailsInd* of 'BUY')

Non-FINRA Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The execution of the order (Trade event with a *reportingExceptionCode* of 'N' and)

FINRA member Broker 1 is required to report the execution to CAT using a Trade event with linkage to the TRF report. Broker 1 is only required to report its own side of the execution in the Trade event side details. The *sideDetailsInd* field must be populated with a value of 'BUY', indicating that the Trade event is one sided, and that only the *buyDetails* will be populated.

Non-FINRA member Broker 2 is required to report the execution to CAT using a Trade event with a *reportingExceptionCode* of 'N' indicating that linkage to the related trade report is not available, as the Trade was executed by a non-FINRA member and reported to the TRF by the FINRA member counterparty. Broker 2 is required to report a two sided trade event showing that the order received from Broker 1 was executed in its proprietary account.

The <i>sideDetailsInd</i> field must be populated with a value of 'BUY' indicating that only the <i>buyDetails</i> are populated.

2.2.4. Industry Member Acting in a Mixed Capacity

This scenario illustrates the CAT reporting requirements when an Industry Member receives a customer order and handles the order in a mixed capacity. In this scenario, the Industry Member receives a customer order for 1,000 shares, routes 500 shares as agent to an exchange for execution, and executes the remainder from a proprietary account.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (MENO)
- The partial route of the customer order to an exchange (MEOR)
- The execution of the remainder of the order from a proprietary account (MEOT)

#	Step	Reported Event	Comments

The <i>sellDetails</i> capture the FDID of the firm proprietary account from which the customer order was filled.

2.3. Representative Order Scenarios

This section illustrates the CAT reporting requirements when an Industry Member generates a representative order in a firm account to facilitate a single customer order. Refer to Sections 2.4.8 and 0 for additional representative order scenarios. Refer to Appendix C of the [CAT Reporting Technical Specifications for Industry Members](#) and [Section F of the CAT FAQs regarding Representative Orders](#) for additional information.

2.3.1. Fill of a Single Customer Order on a Riskless Principal Basis

This scenario illustrates the CAT reporting requirements when an Industry Member fills a customer order on a Riskless Principal basis. In this example, Industry Member Broker 1 generates a representative order to facilitate the execution of a customer order, and routes the order to an exchange for execution.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The generation of a representative order (New Order event)
- The route of the representative order to the exchange (Order Route event)
- The fill of the customer order on a Riskless Principal basis (Order Fulfillment Event)

Explicit linkage between the customer order and the representative order is required in the *aggregatedOrders* field on the representative MENO and the *firmDetails* on the MEOF.

The same guidance would apply in a scenario where one or more of the orders being represented was a proprietary order.

6	Exchange 1 matches and crosses the order	<i>Exchange 1 reports a Participant Trade event</i>	
7	Broker 1 fills the customer order on a Riskless Principal basis	<i>Broker 1 reports an Order Fulfillment event</i> Type: MEOF fillKeyDate: 20170801T000000 fulfillmentID: FO12350 symbol: XYZ eventTimestamp: 20170801T143036.123456 manualFlag: false fulfillmentLinkType: Y quantity: 500 price: 10.00 capacity: R clientDetails: orderKeyDate: 20170801T000000 orderID: O12345 side: B firmDetails: orderKeyDate: 20170801T000000 orderID: O12350 side: SL	The <i>fulfillmentLinkType</i> field must be populated with a value of 'Y' to indicate that the order is a representative order, and that explicit linkage is required. <i>firmDetails</i> are required. Although the firm's representative order was a buy order, the <i>side</i> field in the <i>firmDetails</i> must be populated with a value of 'SL' to indicate that the firm sold shares to the customer.

2.3.2. Fill of Multiple Customer Orders on a Riskless Principal Basis

This scenario illustrates the CAT reporting requirements when an Industry Member generates a proprietary order to facilitate the execution of more than one customer order on a Riskless Principal basis.

In this scenario, Industry Member Broker A receives two customer orders to buy XYZ at 10.01, and generates a single representative order that will be used to facilitate the execution of these two customer orders. The representative order is routed to an exchange where it is executed. Upon execution of the representative order, the Industry Member fills each of the customer orders on a Riskless Principal basis.

Industry Member Broker A is required to report:

- The receipt of each customer order (New Order events)
- The generation of a representative order (New Order event)
- The route of the representative order to the exchange (Order Route event)
- The fill of each customer order on a Riskless Principal basis (Order Fulfillment events)

The execution of the representative order is reported by the exchange.

Explicit linkage between each customer order and the representative order is required in the *aggregatedOrders* field on the representative MENO and the *firmDetails* in each MEOF.

The guidance outlined in this scenario would also apply when an Industry Member combines multiple customer orders into an aggregated or combined order that is not a “representative proprietary” order.

2.3.3. Single Customer Order Handled on a Riskless Principal Basis Where No Execution Occurs

This scenario illustrates the CAT reporting requirements when an Industry Member handles a customer order on a Riskless Principal basis, but the order is ultimately not filled. In this example, Industry Member Broker 1 generates a representative order to facilitate the execution of a customer order, but no further action occurs on the order due to market conditions.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The generation of a representative order (New Order event)

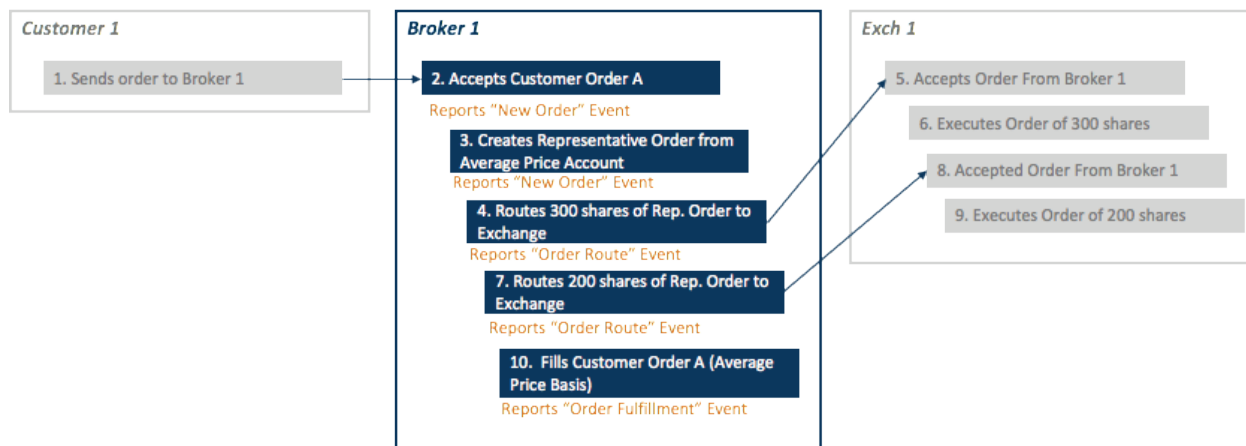

Explicit linkage between the customer order and the representative order is required in the *aggregatedOrders* field on the representative MENO.

#	Step	Reported Event	Comments
1	The customer sends an order to Broker 1	N/A

The <i>aggregatedOrders</i> field must be populated.

2.3.4. Fill of a Single Customer Order on an Average Price Basis

This scenario illustrates the CAT reporting requirements when an Industry Member works a customer order through an average price account and generates one or more representative orders that are routed to an exchange. The Industry Member then fills the customer order on an average price basis.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The generation of a representative order in an average price account (New Order event)
- Each route of the representative order (Order Route events)
- The fill of the customer order at an average price (Order Fulfillment event)

Explicit linkage between the customer order and the representative order is required in the *aggregatedOrders* field on the representative MENO and the *firmDetails* on the MEOF.

Refer to [Scenario 2.1.6](#) for guidance on reporting requirements when an Industry Member facilitates a single customer order via a firm agency account, commonly referred to as an “agency flip” scenario.

2.3.5. Fill of a Single Customer Order from a Pre-Existing Principal Order

This scenario illustrates the CAT reporting requirements when an Industry Member fills a single customer order from a pre-existing principal order as a result of a Manning Obligation. In this scenario, the Industry Member originates a new principal order and routes it to an exchange. Before the principal order is executed, the Industry Member receives a customer order. Upon execution of the principal order, the Industry Member fills the customer order on a Riskless Principal basis.

Industry Member Broker 1 is required to report:

- The origination of the principal order (New Order event)
- The route of the principal order to an exchange (Order Route event)
- The receipt of the customer order (New Order event)
- The fill of the customer order on a Riskless Principal basis (Order Fulfillment event)

Explicit linkage between the customer order and the principal order is required through the *firmDetails* on the MEOF when the customer order is filled from a pre-existing principal order.

		clientDetails: orderKeyDate: 20180501T000000 orderID: O34567 side: B firmDetails: orderKeyDate: 20180501T000000 orderID: O12345 side: SL	

2.3.6. Customer Order is Received and Filled on a Net Basis

This scenario illustrates the CAT reporting requirements when an Industry Member receives a customer order and generates a representative order to facilitate the execution of the customer order. The Industry Member routes the representative order to an exchange for execution, then sells the shares to the customer at a different price than it purchased the shares on the exchange. This scenario is commonly referred to as 'net trading'.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The generation of the representative order (New Order event)
- The route of the representative order to an exchange (Order Route event)
- The execution of the customer order at a net price (Order Trade event)

In this scenario, since the customer order is executed at a price different than what Broker 1 received on the exchange, Broker 1 has an obligation to submit a media trade report for public dissemination purposes. Therefore, Broker 1 would be required to report an Order Trade event representing the outcome of the customer order as opposed to an Order Fulfillment event.

Explicit linkage between the customer order and the representative order is required in the *aggregatedOrders* field on the representative MENO.

2.3.7. Fill of a Single Customer Order with Multiple Executions Print for Print

This scenario illustrates the CAT reporting requirements when an Industry Member generates a representative order in its agency account to facilitate a single customer order. The representative order is routed out to the market and receives multiple fills, which are passed back to the customer's account on a print for print basis.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The generation of the representative order (New Order event)
- The route of the representative order to the exchange (Order Route event)
- Each print for print fill of the customer order (Order Fulfillment event)

Explicit linkage between the customer order and the representative order is required in the *aggregatedOrders* field on the representative MENO and the *firmDetails* on each MEOF.

2.3.8. Firm Generates a Representative Order to Facilitate the Execution of another Representative Order

This scenario illustrates the CAT reporting requirements when an Industry Member generates a representative order to facilitate the execution of another representative order. In this scenario, the Industry Member receives two customer orders, and generates a single representative order (Representative Order A) in its agency average price account that will be used to facilitate the execution

of these two customer orders. The Industry Member then generates a second representative order (Representative Order B) to facilitate the execution of the original representative order on a Riskless Principal basis.

Industry Member Broker 1 is required to report:

- The receipt of each customer order (New Order events)
- The generation of Representative Orders A and B (New Order events)
- The route of Representative Order B to an exchange (Order Route event)
- The fill of Representative Order A on a Riskless Principal basis (Order Fulfillment event)
- The fill of each customer order from its agency average price account (Order Fulfillment events)

The execution of Representative Order B is reported by the exchange.

Since Representative Order A was generated to represent more than one customer order, explicit linkage between Representative Order A and each customer order is required through the *aggregatedOrders* field in the MENO for Representative Order A and the *firmDetails* in each MEOF representing the fill of a customer order.

Explicit linkage between Representative Order A and Representative Order B is required through the *aggregatedOrders* field in the MENO for Representative Order B and the *firmDetails* in the MEOF representing the fill of Representative Order A.

This reporting scenario is applicable when a firm's system generates two separate and distinct representative orders. This reporting scenario is not applicable if the firm's system only generates one representative order, combining steps 5 and 6. If the two representative orders are generated by different desks or departments within the firm, an Order Internal Route Accepted event is required.

2.3.9. Fill of Multiple Customer Orders at an Average Price Using an Unlinked OMS/EMS

This scenario illustrates the CAT reporting requirements when an Industry Member fills customer orders at an average price, but a direct electronic link does not exist between its OMS and EMS. In this example, Industry Member Broker 1 receives three customer orders in its OMS, and generates a representative order to facilitate the execution of the customer orders in its EMS. The representative order is further routed to an exchange for execution, where it receives multiple fills. The Industry Member manually assigns fills to the customer orders in its OMS at an average price of the fills received on the exchange.

In this scenario, direct electronic linkage does not exist between the customer orders and the representative order because direct electronic linkage does not exist between the firm's OMS and EMS.

Industry Member Broker 1 is required to report:

- The receipt of each customer order (New Order events)
- The generation of a representative order (New Order event)
- The route of the representative order to the exchange (Order Route event)
- The fill of each customer at an average price (Order Fulfillment event)

In this scenario, explicit linkage between the customer orders and the representative order is not required, since there is no direct electronic link in the firm's system between the orders being represented and the representative order. However, CAT requires that the orders be marked with the relevant *representativeInd* or *fulfillmentLinkType* value of "YE" to indicate that each order was eligible for customer fills via an unlinked system.

The Industry Member must populate a *representativeInd* value of "YE" on its New Order event reflecting the origination of the representative order. When a *representativeInd* value of "YE" is populated, the *aggregatedOrders* field must be blank.

The Industry Member must populate a *fulfillmentLinkType* value of "YE" on its Order Fulfillment events reflecting the fill of each customer order. When a *fulfillmentLinkType* value of "YE" is populated, the *firmDetails* must be populated with the *accountHolderType* and the FDID of the firm account from which the order was filled, and the *orderId* and *orderKeyDate* fields in the *firmDetails* must be blank.

Refer to Appendix C of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information on use of the value "YE".

2.3.10. Fill of Multiple Customer Orders at an Average Price from an Existing Position

This scenario illustrates the CAT reporting requirements when an Industry Member fills customer orders at an average price via a work flow whereby individual orders are filled after a position has been established and no direct link exists in the firm's system between any single customer order and any single representative order. In this example, Industry Member Broker 1 receives three customer orders. The Industry Member generates two independent orders, from which part or all of the position at the weighted average cost may be given to the customer. The firm orders are further routed to an exchange for execution, and as the firm orders are filled, a position is established in a firm owned or controlled account. The customer orders are ultimately filled from the firm's resulting position at the weighted average cost.

Industry Member Broker 1 is required to report:

- The receipt of each customer order (New Order events)
- The generation of each firm order (New Order event)
- The route of each firm order to the exchange (Order Route event)
- The fill of each customer order at an average price (Order Fulfillment event)

In this scenario, explicit linkage between the customer orders and the firm order is not required, since there is no direct electronic link in the firm's system, as the customer orders were filled from an existing position. However, CAT requires that the orders be marked with the relevant *representativeInd* or *fulfillmentLinkType* value of "YE" to indicate that each order was eligible for customer fills.

The Industry Member must populate a *representativeInd* value of "YE" on its New Order event reflecting the origination of the firm order, since part or all of the order may be used to fill customer orders. When a *representativeInd* value of "YE" is populated, the *aggregatedOrders* field must be blank.

The Industry Member must populate a *fulfillmentLinkType* value of "YE" on its Order Fulfillment events reflecting the fill of each customer order. When a *fulfillmentLinkType* value of "YE" is populated, the *firmDetails* must be populated with the *accountHolderType* and the FDID of the firm account from which the order was filled, and the *orderId* and *orderKeyDate* fields in the *firmDetails* must be blank.

Refer to Appendix C of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information on use of the value "YE".

2.3.11. Fill of a Customer Order at a Guaranteed Volume Weighted Average Price

This scenario illustrates the CAT reporting requirements when an Industry Member fills a single customer order at a guaranteed volume weighted average price. In this scenario, the Industry Member receives a customer order to buy 10,000 shares of XYZ and the firm agrees to execute the order at an agreed upon VWAP. The Industry Member originates multiple proprietary orders in an effort to work the customer order. The Industry Member is unable to achieve the VWAP through its execution of the principal orders. Since the Industry Member was unable to obtain the price that was guaranteed to the customer, the Industry Member sells the shares to the customer from a proprietary account at the guaranteed VWAP price.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The generation of each representative order (New Order events)
- The route of each representative order to an exchange (Order Route events)
- The execution of the customer order at the guaranteed VWAP price which was 9.97 (Order Trade event)

In this scenario, linkage between the customer order and the representative orders is not possible, as the customer order was not filled from the proprietary orders since the guaranteed price was not achieved on the exchange.

In this scenario, since the customer order is ultimately executed from a proprietary account at the guaranteed price, Broker 1 has an obligation to submit a media trade report for public dissemination purposes. Therefore, Broker 1 would be required to report a Trade event representing the outcome of the customer order as opposed to an Order Fulfillment event.

In a scenario where the Industry Member was able to achieve the VWAP through its proprietary orders and fills the customer order in a Riskless Principal capacity, the Industry Member would be required to report Order Fulfillment events with a *fulfillmentLinkType* value of 'Y'. *firmDetails* would be required, and would be populated with the *orderID* of the proprietary order from which the fill came. If the Industry Member's workflow involves a disconnected OMS/EMS or a position fill model, the Industry Member would be required to report an Order Fulfillment event with a *fulfillmentLinkType* value of 'YE', and *firmDetails* would be required. Broker 1 must populate the *firmDetails* with the *accountHolderType* and the FDID of the account from which the order was filled.

Broker 1 must populate the <i>firmDetails</i> with the <i>accountHolderType</i> and the FDID of the account from which the order was filled.

2.3.12. Fill of a Single Customer Order from Multiple Representative Orders

This scenario illustrates the CAT reporting requirements when an Industry Member fills a customer order on from multiple representative orders. In this example, Industry Member Broker 1 generates three representative orders to facilitate the execution of a customer order, and routes each representative order to an exchange for execution. The representative orders are executed throughout the day, and the Industry Member fills the customer at an average price of the three representative orders.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The generation of each representative order (New Order events)
- The route of each representative order to the exchange (Order Route events)
- The fill of the customer order from each representative order (Order Fulfillment event with three Order Fulfillment Supplement events)

Explicit linkage between the customer order and each representative order is required in the *aggregatedOrders* field on the representative MENO. On the Order Fulfillment event, since the customer order was filled from more than one representative order, the *fulfillmentLinkType* must be populated with a value of 'YS'. The *firmDetails* in the Order Fulfillment event must be blank, but the *firmDetails* for each representative order that was used to fill the customer order must be provided in a separate Order Fulfillment Supplement event.

2.4. Internal Route Scenarios

This section illustrates the CAT reporting requirements when an order is passed to a different department or desk within a *CATReporterIMID*. Refer to Section 4.5 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

2.4.1. Customer Order Internally Routed to another Desk and Subsequently Executed Against a Firm Proprietary Account

This scenario illustrates the CAT reporting requirements when an Industry Member internally routes a customer order from the Sales Desk to the Trading Desk, and the order is subsequently executed against a firm proprietary account. The Sales Desk and Trading Desk are separated by information barriers.

Industry Member Broker 1 is required to report:

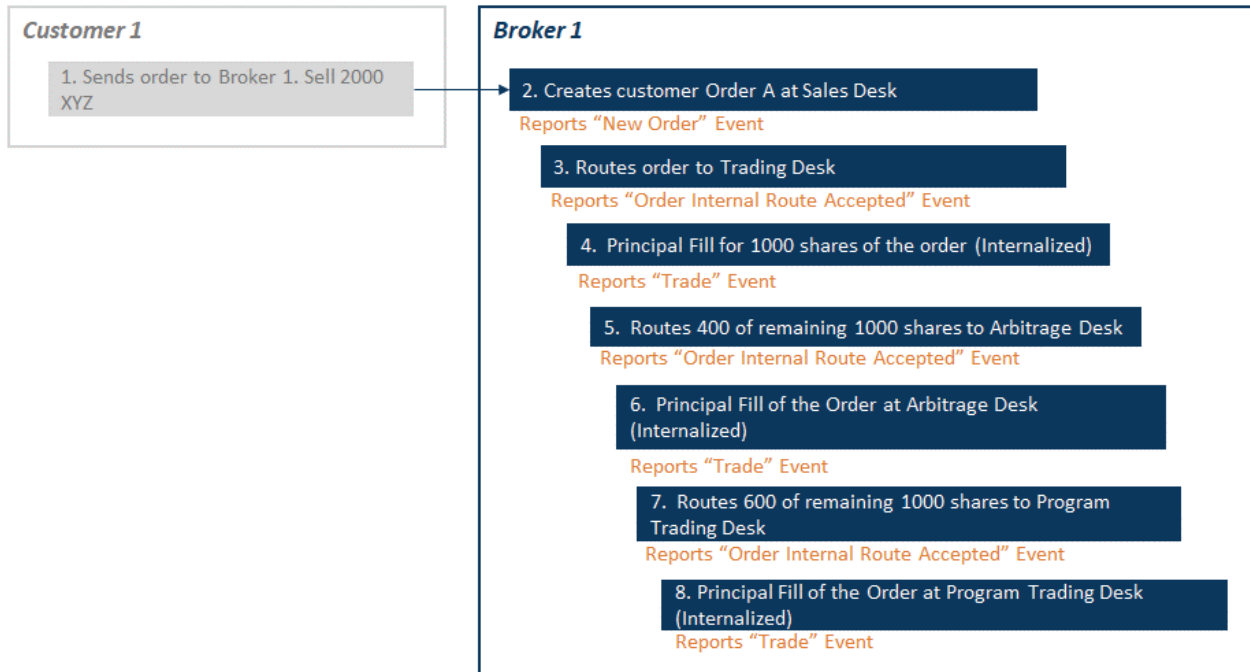

- The receipt of the customer order (New Order event)
- The internal route from the Sales Desk to the Trading Desk (Order Internal Route Accepted event)
- The principal execution (Trade event)

The <i>buyDetails</i> capture the FDID of the firm proprietary account from which the customer order was filled.

2.4.3. Internal Route and Execution, Leaves Quantity Routed Externally

This scenario illustrates the CAT reporting requirements when an Industry Member internally routes an order to another desk where it is partially executed. The remainder of the order is routed to another Industry Member for execution.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The receipt of the internal route from the Sales Desk (Order Internal Route Accepted event)
- The partial execution of the customer order (Trade event)
- The route of the remaining shares to Broker 2 (Order Route event)

Industry Member Broker 2 is required to report:

- Receipt of the order from Broker 1 (Order Accepted event)
- The execution of Broker 1's order (Trade event)

2.4.4. Order Received and Routed Manually, Electronically Captured at Subsequent Desk

This scenario illustrates the CAT reporting requirements when an order is received manually at a branch, then manually routed to the Trading Desk. Upon receipt, the Trading Desk immediately enters the order into an electronic order management system for further handling.

Industry Member Broker 1 is required to report:

- The manual receipt of the customer order (a New Order event)

- The manual receipt and subsequent electronic entry of the internal route from the branch (Order Internal Route Accepted event)
- The electronic route of the order to the exchange (Order Route event)

Industry Members are required to report both an *eventTimestamp* and an *electronicTimestamp* for orders that are received manually and subsequently entered into an electronic system. If the order was received and systematized simultaneously, the values for the *eventTimestamp* and the *electronicTimestamp* must be the same. If the order is not systematized, an *electronicTimestamp* is not required. Refer to [CAT FAQ G4](#) for additional information.

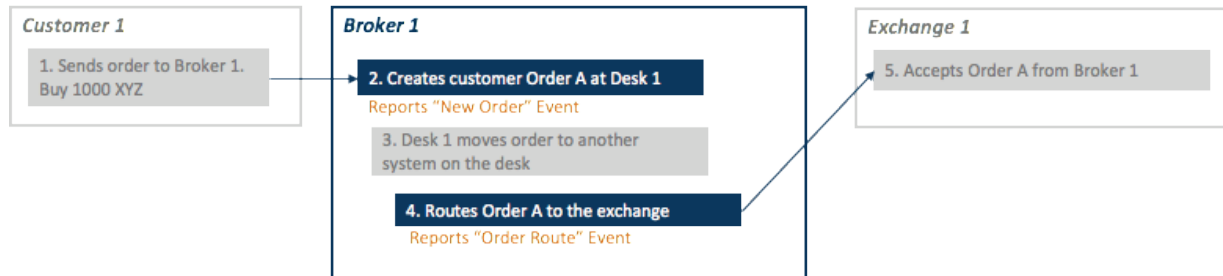

#	Step	Reported Event	Comments
1	Customer calls an order to Broker 1	NA

2.4.5. Industry Member Utilizes Multiple Systems at One Desk

This scenario illustrates the CAT reporting requirements when an Industry Member has multiple trading systems utilized at a single desk. In this scenario, the desk transfers the order into another internal application used within the desk in order to route the order to an exchange. Since the desk handling the

order does not change, the Industry Member is not required to report movement of an order between two systems within the same desk or department.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the customer order to the exchange (Order Route event)

#	Step	Reported Event	Comments

5	Exchange 1 accepts order from Broker 1	NA	

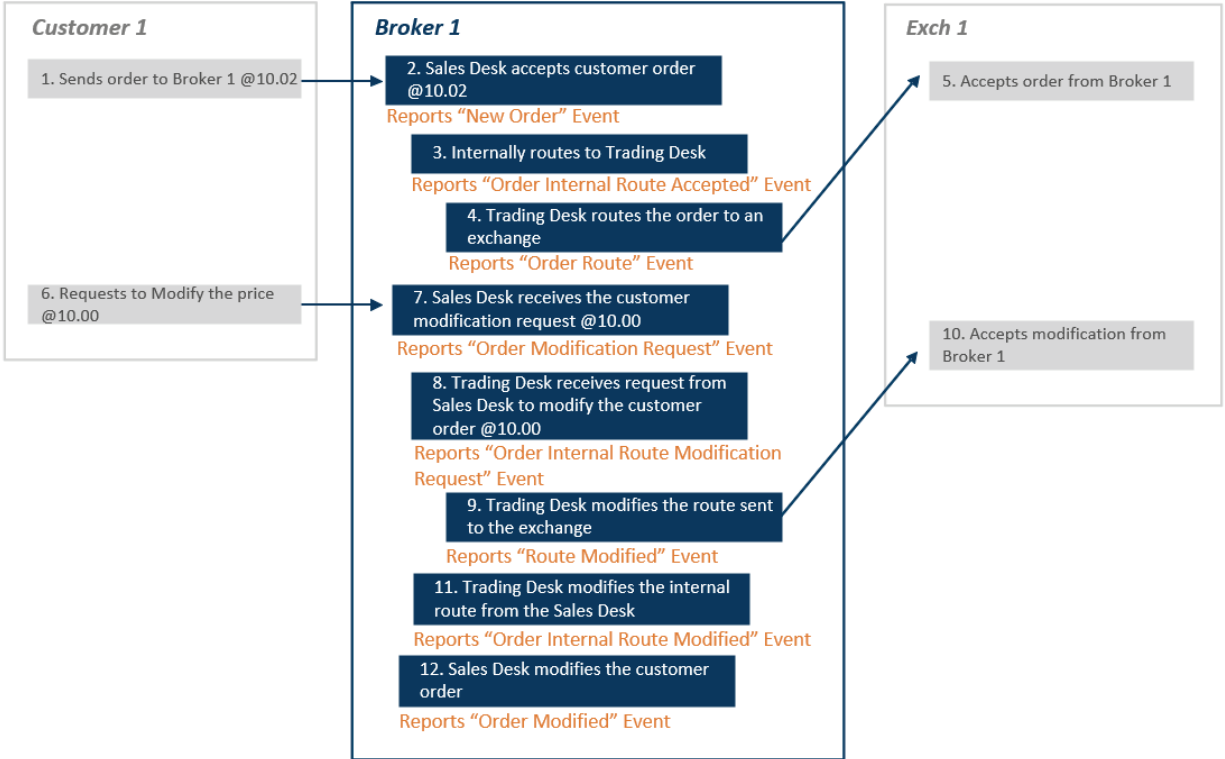

2.4.6. Order Internally Routed to another Desk and Subsequently Modified by a Customer

This scenario illustrates the CAT reporting requirements when an Industry Member internally routes a customer order from the Sales Desk to the Trading Desk, and the order is subsequently modified by the customer. In this scenario, the Sales Desk receives an order from a customer and routes the order to the Trading Desk, where the order is further routed to an exchange for execution. The customer subsequently sends an instruction to modify the price of the order. The Sales Desk modifies the customer order per the customer instruction, cancels the existing internal route to the Trading Desk, and sends a new internal route to the Trading Desk. The Trading Desk receives the new internal route from the Sales Desk, and further routes the modification to the exchange.

The reporting of this scenario depends on whether the Sales Desk modifies the parent order or cancels the internal route as described in the two options below.

Option 1:

In Option 1, the Sales Desk modifies the internal route that was sent to the Trading Desk.

Industry Member Broker 1 is required to report the following for each desk:

- At the Sales Desk
 - ♦ The receipt of the customer order (New Order event)
 - ♦ The receipt of the customer modification request (Order Modification Request event)
 - ♦ The confirmation of the customer Modification (Order Modified event)
- At the Trading Desk
 - ♦ The receipt of the internal route from the Sales Desk (Order Internal Route Accepted event)
 - ♦ The route of the order to the exchange (Order Route event)
 - ♦ The receipt of the modification request from the Sales Desk (Order Internal Route Modification Request event)
 - ♦ The modification of the route to the exchange (Route Modified event)
 - ♦ The confirmation of the internal route modification at the Trading Desk (Order Internal Route Modified event)

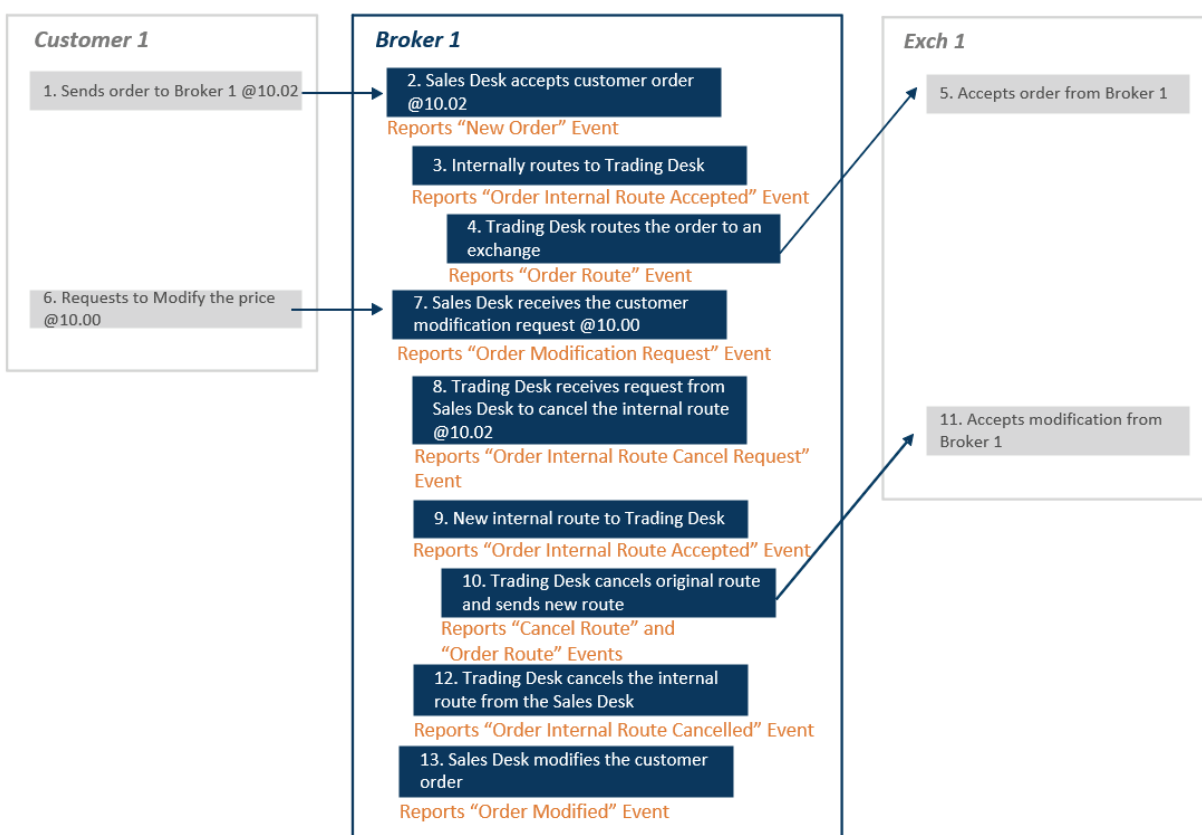

In its Order Modified event, the Sales Desk is required to capture the time the order was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). Depending on the firm's order flow, this may be the same time the request is received, or this may be the time acknowledgement is received from the Trading Desk. In its Order Internal Route Modified event, the Trading Desk is

required to capture the time the internal route was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). Depending on the firm's order flow, this may be the same time the request is received, or this may be the time acknowledgement is received from the exchange. In this example, the *eventTimestamp* on the modification events represents the time that acknowledgement was received.

The Sales Desk is also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Modified event, or in a separate Order Modification Request event. The Trading Desk is also required to capture the time that the request was received from the Sales Desk in the *requestTimestamp* field in the Order Internal Route Modified event, or in a separate Order Internal Route Modification Request event. In this example, the request time is captured using separate request events at each desk.

Option 2:

In Option 2, the Sales Desk sends a new internal route to the Trading Desk.

Industry Member Broker 1 is required to report the following for each desk:

- At the Sales Desk

- ♦ The receipt of the customer order (New Order event)
- ♦ The receipt of the customer modification request (Order Modification Request event)
- ♦ The confirmation of the customer modification (Order Modified event)
- At the Trading Desk
 - ♦ The receipt of the first internal route from the Sales Desk (Order Internal Route Accepted event)
 - ♦ The route of the order to the exchange (Order Route event)
 - ♦ The request to cancel the first internal route from the Sales Desk (Order Internal Route Cancel Request event)
 - ♦ The cancellation of the original route to the exchange (Route Cancelled event)
 - ♦ The new route to the exchange (Order Route event)
 - ♦ The receipt of the second internal route from the Sales Desk (Order Internal Route Accepted event)
 - ♦ The confirmation of the cancellation of the first internal route from the Sales Desk (Order Internal Route Cancelled event)

In its Order Modified event, the Sales Desk is required to capture the time the order was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). Depending on the firm's order flow, this may be the same time the request is received, or this may be the time acknowledgement is received from the Trading Desk. In its Order Internal Route Cancelled event, the Trading Desk is required to capture the time the internal route was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). Depending on the firm's order flow, this may be the same time the request is received, or this may be the time acknowledgement is received from the exchange. In this example, the *eventTimestamp* on the modification/cancellation events represents the time that acknowledgement was received.

The Sales Desk is also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Modified event, or in a separate Order Modification Request event. The Trading Desk is also required to capture the time that the request was received from the Sales Desk in the *requestTimestamp* field in the Order Internal Route Cancelled event, or in a separate Order Internal Route Cancel Request event. In this example, the request time is captured using separate request events at each desk.

2.4.7. Order Internally Routed to another Desk and Subsequently Modified by the Firm

This scenario illustrates the CAT reporting requirements when an Industry Member internally routes a customer order from the Sales Desk to the Trading Desk, and the order is subsequently modified by the Sales Desk. In this scenario, the Sales Desk receives an order from a customer and routes the order to the Trading Desk, where the order is further routed to an exchange for execution. The Sales Desk subsequently modifies the price of the internal route to the Trading Desk. The Trading Desk receives the price modification from the Sales Desk, and further routes the modification to the exchange.

The reporting of this scenario depends on whether the Sales Desk modifies the internal route or cancels the internal route as described in the two options below.

Option 1:

In Option 1, the Sales Desk modifies the Internal Route that was sent to the trading desk.

Industry Member Broker 1 is required to report the following for each desk:

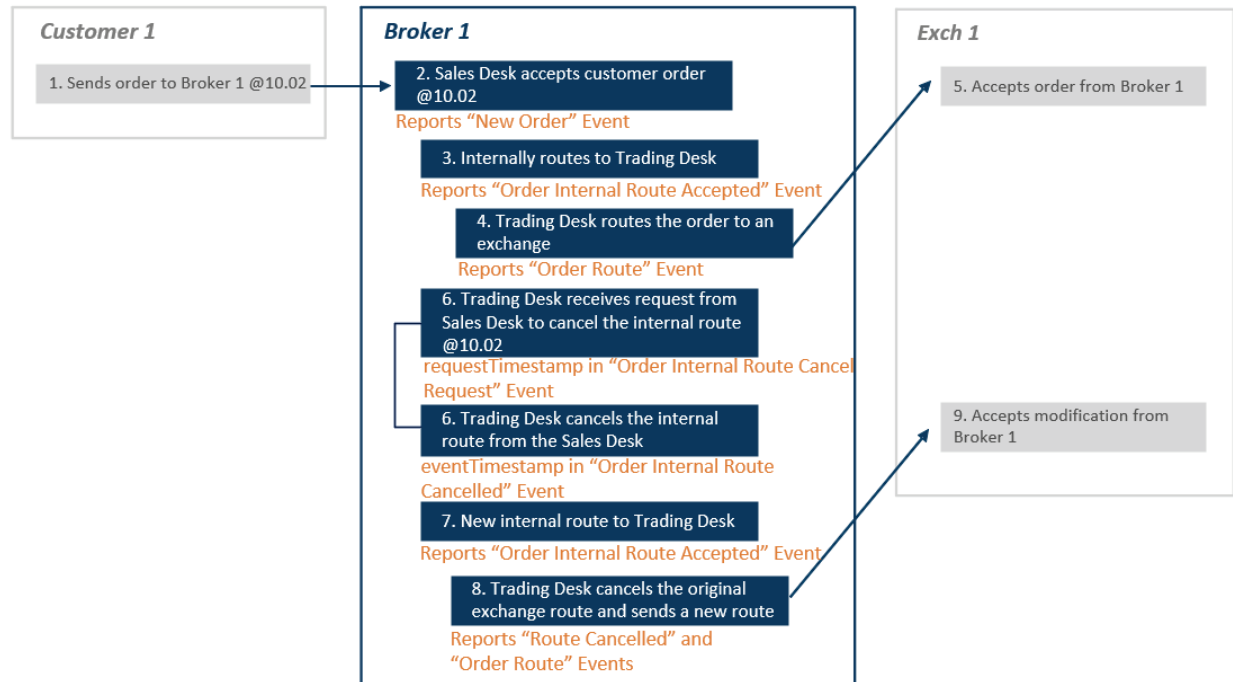

- At the Sales Desk
 - ♦ The receipt of the customer order (New Order event)
- At the Trading Desk
 - ♦ The receipt of the internal route from the Sales Desk (Order Internal Route Accepted event)
 - ♦ The route of the order to the exchange (Order Route event)
 - ♦ The receipt of the modification request from the Sales Desk (*requestTimestamp* in Order Internal Route Modified event)
 - ♦ The modification of the internal route from the Sales Desk (*eventTimestamp* in Order Internal Route Modified event)
 - ♦ The route of the modification to the exchange (Route Modified event)

In its Order Internal Route Modified event, the Trading Desk is required to capture the time the internal route was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). Depending on the firm's order flow, this may be the same time the request is received, or this may be the time acknowledgement is received from the exchange. In this example, the *eventTimestamp* in the Order Internal Route Modified event is the time that the request was received.

The Trading Desk is also required to capture the time that the request was received from the Sales Desk in the *requestTimestamp* field in the Order Internal Route Modified event, or in a separate Order Internal Route Modification Request event. In this example, the request time is captured using the *requestTimestamp* field in the Order Internal Route Modified event.

Option 2:

In Option 2, the Sales Desk cancels the original internal route and sends a new Internal Route to the Trading Desk.

Industry Member Broker 1 is required to report the following for each desk:

- At the Sales Desk
 - ♦ The receipt of the customer order (New Order event)
- At the Trading Desk
 - ♦ The receipt of the initial internal route from the Sales Desk (Order Internal Route Accepted event)
 - ♦ The route of the order to the exchange (Order Route event)
 - ♦ The receipt of the cancellation request from the Sales Desk for the original internal route (*requestTimestamp* in Order Internal Route Cancelled event)
 - ♦ The cancellation of the initial internal route from the Sales Desk (*eventTimestamp* Order Internal Route Cancelled event)
 - ♦ The receipt of a second internal route from the Sales Desk (Order Internal Route Accepted event)
 - ♦ The route of the order to the exchange (Order Route event)

In its Order Internal Route Cancelled event, the Trading Desk is required to capture the time the internal route was cancelled (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). Depending on the firm's order flow, this may be the same time the request is received, or this may be the

time acknowledgement is received from the exchange. In this example, the *eventTimestamp* in the Order Internal Route Cancelled event is the time that the request was received.

The Trading Desk is also required to capture the time that the request was received from the Sales Desk in the *requestTimestamp* field in the Order Internal Route Cancelled event, or in a separate Order Internal Route Cancel Request event. In this example, the request time is captured using the *requestTimestamp* field in the Order Internal Route Cancelled event.

2.4.8. Order Internally Routed to Multiple Desks and Subsequently Cancelled by a Customer

This scenario illustrates the CAT reporting requirements when an Industry Member internally routes a customer order to multiple desks, and the order is subsequently cancelled by the customer.

In this scenario, the Sales Desk receives an order from a customer and routes the order to Trading Desk 1, who further routes the order to Trading Desk 2, where the order is further routed to an exchange for execution. The customer subsequently sends an instruction to cancel the order. Since the Sales Desk

knows that Trading Desk 2 is holding the order, the cancellation is communicated directly to Trading Desk 2 by the Sales Desk, and is not communicated to Trading Desk 1. Trading Desk 1 does not have an obligation to report an Order Internal Route Cancelled event since it did not receive the cancellation instruction.

Industry Member Broker 1 is required to report the following for each desk:

- At the Sales Desk
 - ♦ The receipt of the customer order (New Order event)
 - ♦ The receipt of the customer request (Order Cancel Request event)
 - ♦ The confirmation of the customer cancellation (Order Cancelled event)
- At Trading Desk 1
 - ♦ The receipt of the internal route from the Sales Desk (Order Internal Route Accepted event)
- At Trading Desk 2
 - ♦ The receipt of the internal route from Trading Desk 1 (Order Internal Route Accepted event)
 - ♦ The receipt of the request from the Sales Desk (Order Internal Route Cancel Request event)
 - ♦ The confirmation of the cancellation of the internal route from the Sales Desk (Order Internal Route Cancelled event)

In its Order Cancelled event, the Sales Desk is required to capture the time the order was cancelled (e.g., the time that the order was confirmed to be cancelled in the firm's OMS/EMS). Depending on the firm's order flow, this may be the same time the request is received, or this may be the time acknowledgement is received from the Trading Desk. In its Order Internal Route Cancelled event, the Trading Desk is required to capture the time the internal route was cancelled (e.g., the time that the order was confirmed to be cancelled in the firm's OMS/EMS). Depending on the firm's order flow, this may be the same time the request is received, or this may be the time acknowledgement is received from the exchange. In this example, the *eventTimestamp* on the cancellation events represents the time that acknowledgement was received.

The Sales Desk is also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Modified event, or in a separate Order Modification Request event. Trading Desk 2 is also required to capture the time that the request was received from the Sales Desk in the *requestTimestamp* field in the Order Internal Route Modified event, or in a separate Order Internal Route Modification Request event. In this example, the request time is captured using separate request events at each desk.

Since the Order Cancel Request event was reported, the <i>requestTimestamp</i> in the Order Cancelled event must be blank.

2.5. Order Modification Scenarios

This section illustrates the CAT reporting requirements when the Material Terms of an order have been changed, or when an order is cancel/replaced. Refer to Section 4.7 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

2.5.1. Customer Order and Modifications

This scenario illustrates the CAT reporting requirements when a customer places an order with an Industry Member and modifies the order multiple times.

Industry Members are required to capture the *eventTimestamp* in Order Modified events reflecting the time the order was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). Industry Members are also required to capture the time that the request was received from the customer either in the *requestTimestamp* field in the Order Modified event, or in a separate Order Modification Request event, as illustrated in Options 1 and 2 below. In this example, the *eventTimestamp* reflects the same time that the request was received from the customer.

Based on its order handling practices, the Industry Member may choose to assign a new Order Key to its Order Modified events by assigning a new *orderID*. In addition to illustrating the use of the *requestTimestamp* field, Option 1 illustrates how a modification must be reported when a new Order Key is not assigned. In addition to illustrating the use of the Order Modification Request event, Option 2 illustrates how a modification must be reported when a new Order Key is assigned.

Option 1:

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The receipt of the customer modification requests (*requestTimestamp* in Order Modified event)
- The confirmation of the customer modification (*eventTimestamp* in Order Modified event)

Since Broker 1 is populating the *requestTimestamp* field in the Order Modified event, an Order Modification Request event must not be reported.

Option 2:

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The receipt of the customer modification requests (Order Modification Request events)
- The confirmation of the customer modification (Order Modified event)

Since Broker 1 is reporting a separate Order Modification Request event in this example, the *requestTimestamp* in the Order Modified event must be blank.

			orderID: OM3456 symbol: XYZ priorOrderKeyDate: 20180417T143041.046151 priorOrderID: OM1234 eventTimestamp: 20180417T143041.046151 manualFlag: false receiverIMID: senderIMID: senderType: routedOrderID: initiator: C side: B price: 10.01 quantity: 1000 leavesQty: 1000 orderType: LMT timeInForce: DAY=20180417 tradingSession: REG custDspIntrFlag: false requestTimestamp:	the previous Order Modified event. The Order Modification Request event must maintain the same <i>orderID</i> OM1234 as the previous Order Modified event for which the modification is being requested. In both options: Since the modification was received from a non-CAT reporting customer, the <i>receiverIMID</i> , <i>senderIMID</i> , <i>senderType</i> , and <i>routedOrderID</i> fields are not required. Note that, since the change to the order was only to the limit price, an MEOJ event could have alternatively been used to report the customer order modification.

2.5.2. Customer Requested Modification of an Order Previously Routed to an Exchange

This scenario illustrates the CAT reporting requirements when a customer requests a modification on an order that the Industry Member had previously routed to an exchange.

Industry Members are required to capture the *eventTimestamp* in Order Modified events reflecting the time the order was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). In this example, the *eventTimestamp* reflects the time that acknowledgement was received from the exchange. Industry Members are also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Modified event, or in a separate Order Modification Request event. In this scenario, the modification is reflected using the *requestTimestamp* in the Order Modified event.

For the exchange route portion of the scenario, the Industry Member may report either a modification of the route that was sent to the exchange or the cancellation of the original route that was sent to the exchange followed by a new route based on its order handling practices, as illustrated in Options 1 and 2 below.

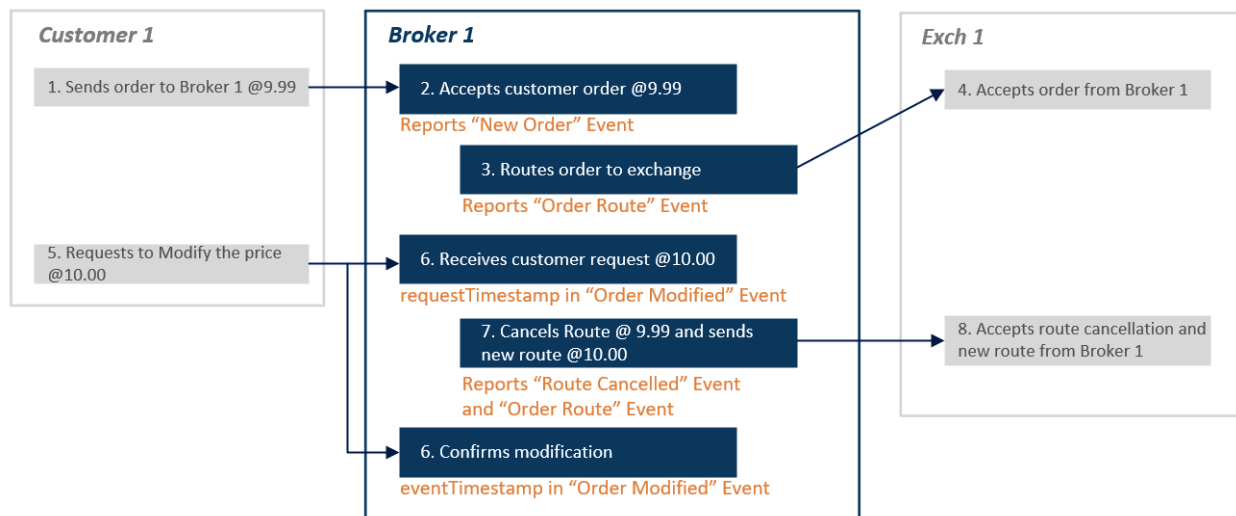

Option 1:

Industry Member Broker 1 is required to report:

- The receipt of customer order (New Order event)
- The route to the exchange (Order Route event)
- The receipt of the customer modification request (*requestTimestamp* in Order Modified event)
- The confirmation of the customer modification (*eventTimestamp* in Order Modified event)
- The modification of the route of the modification to the exchange (Route Modified event)

Option 2:

Industry Member Broker 1 is required to report:

- The receipt of customer order (New Order event)
- The route to the exchange (Order Route event)

- The receipt of the customer modification request (*requestTimestamp* in Order Modified event)
- The confirmation of the customer modification (*eventTimestamp* in Order Modified event)
- The cancellation of the original route of the modification to the exchange (Route Cancelled event)
- The route of the modification to the exchange (Order Route event)

2.5.3. Customer Requested Modification of Order Previously Routed to another Industry Member

This scenario illustrates the CAT reporting requirements when a customer requests a modification on an order that was previously routed to another Industry Member.

Industry Members are required to capture the *eventTimestamp* in Order Modified events reflecting the time the order was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). In this example, the *eventTimestamp* for Broker 1 reflects the time that acknowledgement was received from Broker 2, and the *eventTimestamp* for Broker 2 reflects the same time that the request was received from Broker 1. Industry Members are also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Modified event, or in a separate Order Modification Request event. In this example, Broker 1 reports a separate Order Modified and Order Modification Request events, and Broker 2 reports an Order Modified event using the *requestTimestamp* field.

For the interfirm route portion of the scenario, the Industry Member routing the order may report either a modification of the route that was sent or the cancellation of the original route that was sent to the exchange followed by a new route based on its order handling practices, as illustrated in Options 1 and 2 below.

Option 1:

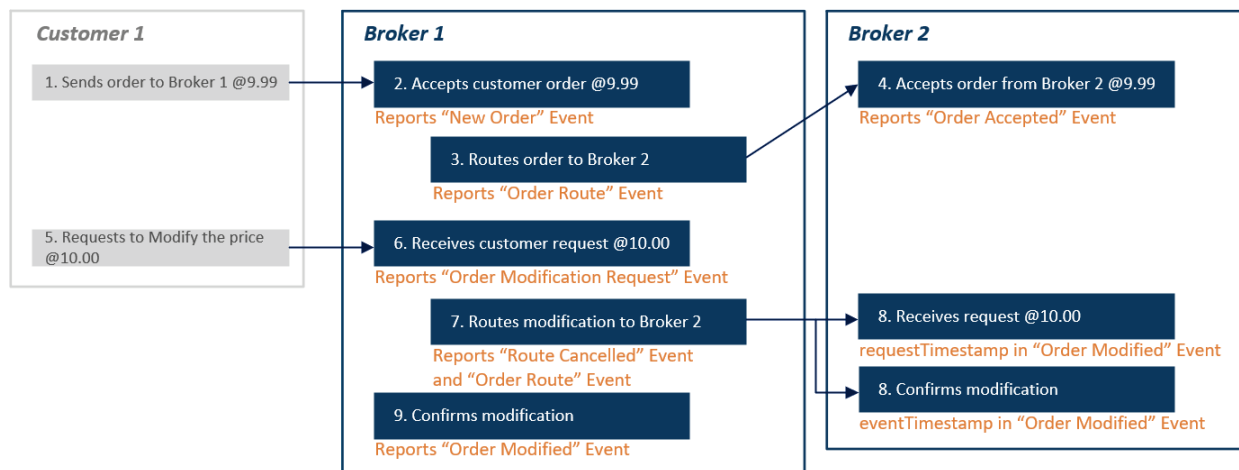

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to Broker 2 (Order Route event)
- The receipt of the customer modification request (*requestTimestamp* in Order Modified event)
- The confirmation of the customer modification (*eventTimestamp* in Order Modified event)
- The modification of the route of the modification to the exchange (Route Modified event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The receipt of the modification request from Broker 1 (*requestTimestamp* in Order Modified event)
- The confirmation of the modification (*eventTimestamp* in Order Modified event)

Option 2:

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to Broker 2 (Order Route event)
- The receipt of the customer modification request (*requestTimestamp* in Order Modified event)
- The confirmation of the customer modification (*eventTimestamp* in Order Modified event)
- The cancellation of the original route of the modification to the exchange (Route Cancelled event)
- The route of the modification to the exchange (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The receipt of the modification request from Broker 1 (*requestTimestamp* in Order Modified event)
- The confirmation of the modification (*eventTimestamp* in Order Modified event)

2.5.4. System Driven Modification of Previously Routed Order

This scenario illustrates the CAT reporting requirements when an Industry Member uses a trading algorithm¹, which modifies an order that was previously routed to another Industry Member. In this scenario, since the order modification was initiated by the trading algorithm, the routing Industry Member Broker 1 is required to report a Route Modified event.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to Broker 2 (Order Route event)
- The modification of the route by the trading algorithm (Route Modified event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The receipt of the customer modification request (*requestTimestamp* in Order Modified event)
- The confirmation of the customer modification (*eventTimestamp* in Order Modified event)

Industry Members are required to capture the *eventTimestamp* in Order Modified events reflecting the time the order was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). In this example, the *eventTimestamp* for Broker 2 reflects the same time that the request was received from Broker 1. Industry Members are also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Modified event, or in a separate Order Modification Request event. In this example, Broker 2 reports the *requestTimestamp* field in its Order Modified event.

¹ Trading Algorithm is defined in Appendix F of [the CAT Reporting Technical Specifications for Industry Members \("Technical Specifications"\)](#)

Broker 2 may alternatively capture the request time using a separate Order Modification Request event.</p>

2.5.5. Manual Route, Followed by an Electronic Modification

This scenario illustrates reporting requirements when an Industry Member routes an order manually, then sends an electronic message to modify the Material Terms of the order.

Industry Member Broker 1 is required to report:

- The electronic receipt of the customer order (New Order event)
- The manual route of the order to Broker 2 (Order Route event)
- The electronic customer modification (Order Modified event)
- The cancellation of the original Order Route event (Route Cancelled event)
- The electronic route of the modification order to Broker 2 (Order Route event)

Industry Member Broker 2 is required to report:

- The manual receipt of the route from Broker 1 (Order Accepted event)
- The electronic modification from Broker 1 (Order Modified event)

Industry Members are required to report both an *eventTimestamp* and an *electronicTimestamp* for orders that are received manually and subsequently entered into an electronic system. If the order was received and systematized simultaneously, the values for the *eventTimestamp* and the *electronicTimestamp* must be the same. If the order is not systematized, an *electronicTimestamp* is not required. Refer to [CAT FAQ G4](#) for additional information.

Industry Members are required to capture the *eventTimestamp* in Order Modified events reflecting the time the order was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). In this example, the *eventTimestamp* for Broker 1 reflects the time that acknowledgement was received from Broker 2, and the *eventTimestamp* for Broker 2 reflects the same time that the request was received from Broker 1. Industry Members are also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Modified event, or in a separate Order Modification Request event. In this example, the request time is captured in the *requestTimestamp* field on the Order Modified events.

8	Broker 2 modifies the order per the customer's instructions.	<i>Broker 2 reports an Order Modified event</i> type: MEOM orderKeyDate: 20180417T000000 orderID: O99101 symbol: XYZ priorOrderKeyDate: 20180417T000000 priorOrderID: B2O908 eventTimestamp: 20180417T143110.140456 manualFlag: false receiverIMID: 456:BRK2 senderIMID: 123:BRK1 senderType: F routedOrderID: RTO34567 initiator: C price: 9.99 quantity: 900 leavesQty: 900 orderType: LMT timeInForce: DAY=20180417 tradingSession: REG isoInd: NA custDsplntrFlag: false requestTimestamp: 20180417T143110.140456	Upon receipt of the modification, Broker 1 assigns a new Order Key with <i>orderID</i> O99101. The Prior Order Key with <i>orderID</i> B2O908 must be populated in the <i>priorOrderID</i> field. The Prior Order Key links the Order Modified event with the Order Accepted event. In this example, the <i>eventTimestamp</i> for Broker 2 reflects the time that the request was received from Broker 1.

2.5.6. Modification to an Order Previously Routed to an Exchange that requires the use of the Original Routed Order ID

This scenario illustrates CAT reporting requirements when an Industry Member routes an order to an exchange that requires the use of the original Routed Order ID for a modification to an order that was previously routed to that exchange. This scenario is only applicable to orders modified and resent to exchanges with a requirement to reuse the Routed Order ID. In these instances, the routing firm must designate on the Order Route event that the Routed Order ID is duplicated.

This reporting scenario applies to orders originated by the firm as well as orders received from customers and from other Industry Members. The example documented in this scenario represents an order originated by the firm.

Industry Member Broker 1 is required to report:

- The origination of a principal order (New Order event)
- The route to an exchange (Order Route event)
- The order modification (Order Modified event) The modification of the exchange route (Route Modified event)

Industry Members are required to capture the *eventTimestamp* in Order Modified events reflecting the time the order was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). In this example, the *eventTimestamp* for Broker 1 reflects the time that acknowledgement was received from the exchange.

6	EXCH1 updates order	<p>Exchange 1 reports a <i>Participant Order Modified event</i></p>	

2.5.7. Modification of a Multi-day Order

This scenario illustrates the CAT reporting requirements when a customer places an order with an Industry Member and modifies the order on a subsequent day.

Industry Member Broker 1 is required to report:

- The receipt of the customer order on T (New Order event)
- The receipt of the customer modification request on T+1 (*requestTimestamp* in Order Modified event)
- The confirmation of the customer modification on T+1 (*eventTimestamp* in Order Modified event)

Industry Members are required to capture the *eventTimestamp* in Order Modified events reflecting the time the order was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). Industry Members are also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Modified event, or in a separate Order Modification Request event. In this example, the *eventTimestamp* reflects the same time that the request was received from the customer. In this example, the request time is captured in the *requestTimestamp* field on the Order Modified events.

#	Step	Reported Event	Comments
		requestTimestamp: 20180418T143035.236456	

2.5.8. Modification of a Customer Order Resulting in a Modification to the Corresponding Representative Order

This scenario illustrates the CAT reporting requirements when a customer modifies an order, which results in a modification to the corresponding representative order. In this example, Industry Member Broker 1 generates a representative order to facilitate the execution of a customer order, and routes the order to an exchange for execution. The customer subsequently modifies the limit price on its order, and Broker 1 updates the limit price on its corresponding representative order.

Industry Member Broker 1 is required to report the following for the Customer Order:

- The receipt of the customer order (New Order event)
- The receipt of the customer modification request (*requestTimestamp* in Order Modified event)
- The confirmation of the modification of the representative order (*eventTimestamp* in Order Modified Event)

Industry Member Broker 1 is required to report the following for the Representative Order:

- The generation of a representative order (New Order event)

- The route of the representative order to an exchange (Order Route event)
- The route of the modification to the exchange (Order Route event)
- The cancellation of the original route to the exchange (Route Cancelled event)
- The confirmation of the customer modification (*eventTimestamp* in Order Modification event)

Explicit linkage between the customer order and the representative order is required through the *aggregatedOrders* field on the representative New Order event.

Industry Members are required to capture the *eventTimestamp* in Order Modified events reflecting the time the order was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). In this example, the *eventTimestamp* in both MEOM events reported by Broker 1 reflects the time that acknowledgement was received from the exchange. Industry Members are also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Modified event, or in a separate Order Modification Request event. In this example, the request time is captured in the *requestTimestamp* field on the Order Modified events.

2.6. Cancellation Scenarios

This section illustrates the CAT reporting requirements when an order is fully or partially cancelled. Refer to Section 4.10 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

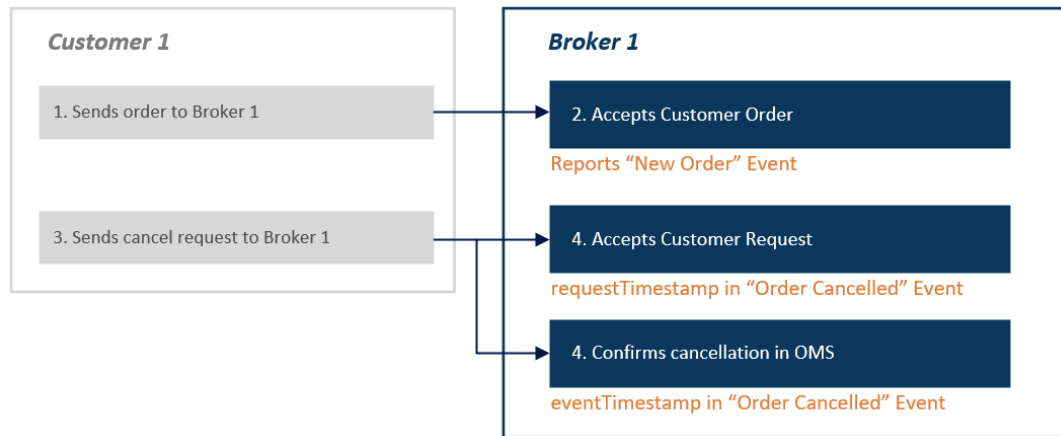

2.6.1. Full cancellation of a Customer Order

This scenario illustrates the CAT reporting requirements when a customer cancels an order placed with an Industry Member on the same day that it was created.

Industry Members are required to capture the *eventTimestamp* in Order Cancelled events reflecting the time the order was cancelled (e.g., the time that the order was confirmed to be cancelled in the firm's OMS/EMS). Industry Members are also required to capture the time that the request was received from the customer either in the *requestTimestamp* field in the Order Cancelled event, or in a separate Order Cancel Request event, as illustrated in Options 1 and 2 below. In this example, the *eventTimestamp* reflects the same time that the request was received from the customer.

For illustration purposes, actions taken by the Broker between the receipt of the original order and the cancellation are not included.

Option 1:

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The receipt of the customer cancellation request (*requestTimestamp* in Order Cancelled event)
- The confirmation of the cancellation (*eventTimestamp* in Order Cancelled event)

Since Broker 1 is populating the *requestTimestamp* field in the Order Cancelled event, an Order Cancel Request event must not be reported.

Option 2:

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The receipt of the customer Cancellation request (Order Cancellation Request events)
- The confirmation of the cancellation (Order Cancelled event)

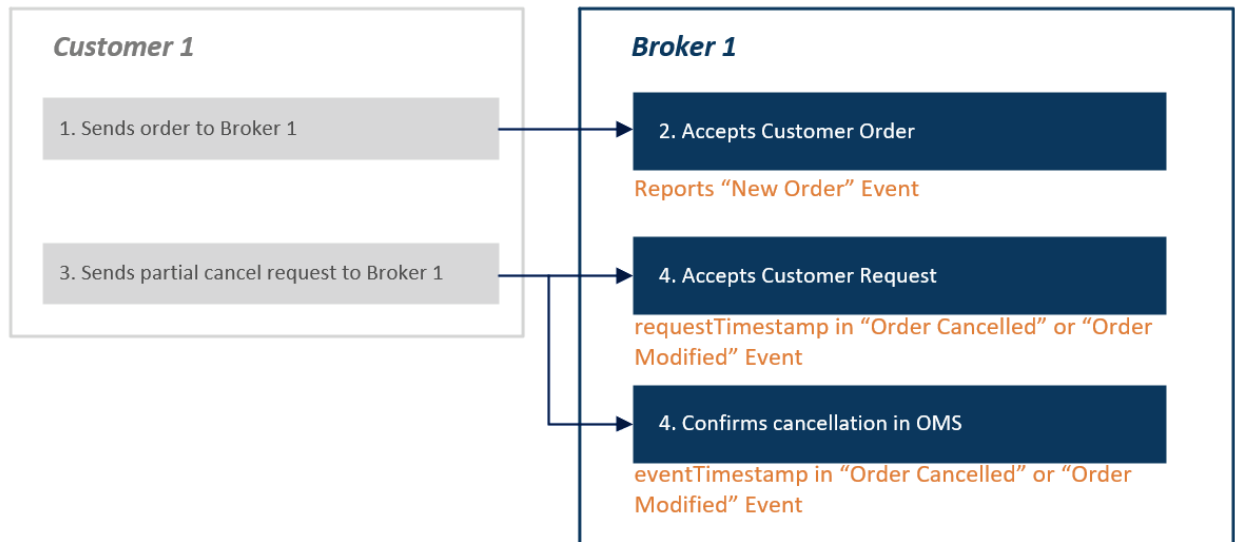

Since Broker 1 is reporting a separate Order Cancel Request event in this example, the *requestTimestamp* in the Order Modified event must be blank.

2.6.2. Partial Cancellation of an Order

The following scenario illustrates the CAT reporting requirements when a customer partially cancels an order placed with an Industry Member on the same day that it was created. The Industry Member may report the partial cancellation using either an Order Cancelled event or an Order Modified event.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The receipt of the customer's partial cancellation request (*requestTimestamp* in Order Cancelled or Order Modified event)
- The confirmation of the partial cancellation (*eventTimestamp* in Order Cancelled or Order Modified event)

Based on its order handling practices, the Industry Member may choose to report this activity to CAT using either an Order Cancelled event or an Order Modified event. The steps shown below illustrate this activity must be reported in scenarios where an Order Cancelled event is reported (Option 1), and in scenarios where an Order Modified event is reported (Option 2).

Industry Members are required to capture the *eventTimestamp* in Order Cancelled/Modified events reflecting the time the order was cancelled/modified (e.g., the time that the order was confirmed to be cancelled/modified in the firm's OMS/EMS). Industry Members are also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Cancelled/Modified event, or in a separate Order Cancel/Modification Request event. In this example, the *eventTimestamp* reflects the same time that the request was received from the customer. In this example, the request time is captured in the *requestTimestamp* field on the Order Modified events.

	the order per the customer's instruction	type: MEOC orderKeyDate: 20180417T000000 orderID: O12345 symbol: XYZ eventTimestamp: 20180417T153036.123456 manualFlag: false cancelQty: 400 leavesQty: 600 initiator: C requestTimestamp: 20180417T153036.123456	type: MEOM orderKeyDate: 20180417T000000 orderID: O12345 symbol: XYZ priorOrderID: O12345 priorOrderKeyDate: 20180417T000000 eventTimestamp: 20180417T153036.123456 manualFlag: false receiverIMID: senderIMID: senderType: routedOrderID: initiator: C side: B price: 10.00 quantity: 600 leavesQty: 600 orderType: LMT timeInForce: DAY=20180417 tradingSession: REG custDspIntrFlag: false representativeInd: N requestTimestamp: 20180417T153036.123456	the Order Cancelled/ Modified event. Broker 1 may alternatively capture the request time using a separate Order Cancellation/ Modification Request event.

2.6.3. Partial Cancellation of a Partially Executed Order

The following scenario illustrates the CAT reporting requirements when a customer reduces the shares quantity on an order that has been partially executed. The Industry Member may choose to report the partial cancellation using either an Order Cancelled event or an Order Modified event based on its order handling practices.

In this scenario, Industry Member Broker 1 receives a customer order for 1,000 shares, and routes the order to an exchange for execution. Broker 1 receives a partial execution of 200 shares on the exchange, then receives an instruction from the customer to reduce the shares quantity by 200 shares. Broker 1 receives another partial execution for 200 shares, then receives an instruction from the customer to reduce the quantity of the order to 400 shares, leaving the customer order as fully executed.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route to the exchange (Order Route event)
- The receipt of the customer's partial cancellation request (*requestTimestamp* in Order Cancelled or Order Modified event)
- The modification or cancellation of the order previously routed to the exchange (Route Cancelled or Route Modified event)
- The confirmation of the partial cancellation (*eventTimestamp* in Order Cancelled or Order Modified event)

Based on its order handling practices, the Industry Member may choose to report this activity using Order Cancelled events or Order Modified events. The steps shown below illustrate this activity must be reported in scenarios where an Order Cancelled event is reported (Option 1), and in scenarios where an Order Modified event is reported (Option 2).

Industry Members are required to capture the *eventTimestamp* in Order Cancelled/Modified events reflecting the time the order was cancelled/modified (e.g., the time that the order was confirmed to be cancelled/modified in the firm's OMS/EMS). Industry Members are also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Cancelled/Modified event, or in a separate Order Cancel/Modification Request event. In this example, the

eventTimestamp reflects the time that acknowledgement was received from the exchange. In this example, the request time is captured in the *requestTimestamp* field on the Order Modified events.

2.6.4. Industry Member Cancels an Order Previously Routed to Another Industry Member

This scenario illustrates the CAT reporting requirements when a customer cancels an order that was previously routed to another Industry Member.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the customer order to Broker 2 (Order Route event)
- The customer cancellation request (Cancel Request event)
- The cancellation of the route to Broker 2 (Route Cancelled event)
- The confirmation of the cancellation (Order Cancelled event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)

- The receipt of the cancellation request from Broker 1 (*requestTimestamp* in Order Cancelled event)
- The cancellation of the order (*eventTimestamp* in Order Cancelled event)

Industry Members are required to capture the *eventTimestamp* in Order Cancelled events reflecting the time the order was cancelled (e.g., the time that the order was confirmed to be cancelled in the firm's OMS/EMS). In this example, the *eventTimestamp* for Broker 1 reflects the time that acknowledgement was received from Broker 2, and the *eventTimestamp* for Broker 2 reflects the time that the request was received from the customer. Industry Members are also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Cancelled/Modified event, or in a separate Order Cancel/Modification Request event. In this example, the request time is captured in the *requestTimestamp* field on the Order Modified events. In this example, Broker 1 reports a separate Order Cancelled and Order Cancel Request events, and Broker 2 reports an Order Cancelled event using the *requestTimestamp* field.

2.6.5. Industry Member Cancels a Route to Another Industry Member

This scenario illustrates the CAT reporting requirements when an Industry Member cancels a route that was sent to another Industry Member. In this scenario, Industry Member Broker 1 routes an order to Industry Member Broker 2. Broker 1 then cancels the route that was sent to Broker 2 and routes the order to Broker 3 where the order is executed.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the customer order to Broker 2 (Order Route event)
- The cancellation of the route to Broker 2 (Route Cancelled event)
- The route of the customer order to Broker 3 (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The receipt of the cancellation request from Broker 1 (*requestTimestamp* in Order Cancelled event)
- The cancellation of Broker 1's order (*eventTimestamp* in Order Cancelled event)

Industry Member Broker 3 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The execution of Broker 1's order (Trade event)

In this scenario, Broker 1 cancelled the route that was sent to Broker 2, the customer order remained open in Broker 1's books and records, and the order was further routed to Broker 3. Therefore, Broker 1 is required to report the cancellation of the route that was sent to Broker 2 using a Route Cancelled event. This guidance would also apply if Broker 1 routed the order to an exchange as opposed to another broker-dealer.

Since the order in Broker 2's books and records is fully cancelled, Broker 2 is required to report the cancellation of the order to CAT. Industry Members are required to capture the *eventTimestamp* in Order Cancelled/Modified events reflecting the time the order was cancelled/modified (e.g., the time that the order was confirmed to be cancelled/modified in the firm's OMS/EMS). Industry Members are also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Cancelled/Modified event, or in a separate Order Cancel/Modification Request event. In this example, the *eventTimestamp* reflects the time that acknowledgement was received from the exchange. In this example, the request time is captured in the *requestTimestamp* field on the Order Modified events.

2.6.6. Firm Initiated Cancellation of a Customer Order

This scenario illustrates the CAT reporting requirements when an Industry Member cancels an order received from another Industry Member. In this scenario, Industry Member Broker 1 routes an order to Industry Member Broker 2. Broker 2 later cancels the order that it received from Broker 1 due to market conditions.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the customer order to Broker 2 (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The cancellation of Broker 1's order (Order Cancelled event)

Since the cancellation was initiated by Broker 2, Broker 1 is not required to report a Route Cancelled event to CAT reflecting that the route was cancelled by Broker 2. Broker 1 is required to report any subsequent actions taken on the order as a result of the unsolicited cancellation by Broker 2, including if Broker 1 ultimately cancelled the order, or if Broker 1 routed the order to another destination.

Industry Members are required to capture the *eventTimestamp* in Order Cancelled events reflecting the time the order was cancelled (e.g., the time that the order was confirmed to be cancelled in the firm's OMS/EMS). In this example, the *eventTimestamp* reflects the time that Broker 2 cancelled the order on its books and records. Broker 2 is not required to report a receipt time, as the cancellation was not requested by Broker 1 and was initiated by the firm.

6	The route is cancelled on Broker 1's books and records	N/A	Since the order was cancelled by Broker 2, Broker 1 is not required to report a Route Cancelled event.

2.6.7. Customer Requests to Cancel an Order that has Already Been Fully Executed

This scenario illustrates the CAT reporting requirements when an Industry Member attempts to cancel an order that has already been fully executed. In this scenario, Industry Member Broker 1 receives a customer order, and routes the order to Broker 2 for execution. The customer cancels the order, but the order was fully executed several milliseconds before the cancellation was initiated by the customer.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the customer order to Broker 2 (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The execution of Broker 1's order (Trade event)

In accordance with [CAT FAQ B42](#), Broker 1 and Broker 2 are not required to report an Order Cancel Request event in Phase 2d, since the request was received after the order was fully executed. However, this activity may be required in future phases of CAT. If Broker 1 or Broker 2 choose to optionally report an Order Cancel Request event, it will not be rejected by CAT in accordance with [CAT FAQ P14](#).

7	Broker 2 receives the cancellation instruction from Broker 1	NA	Broker 2 is not required to report an Order Cancel Request event since the order has already been fully executed.

2.6.8. Unsolicited Cancellation of a Customer Order by an Exchange

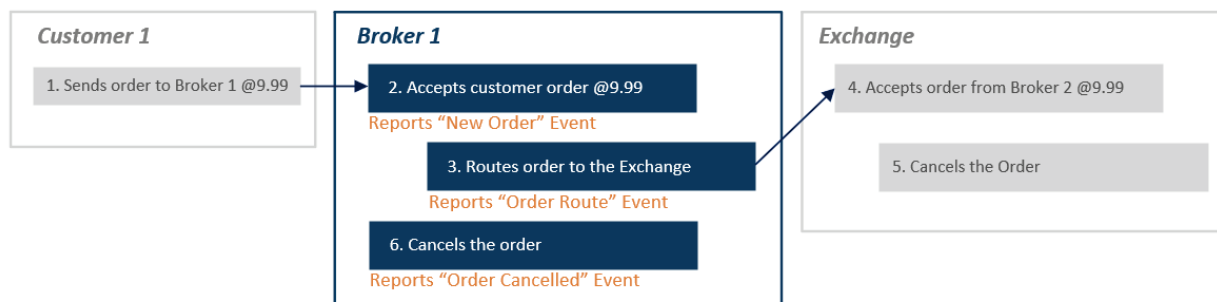

This scenario illustrates the CAT reporting requirements when an Industry Member routes a customer order to an exchange, and the exchange cancels the order without receiving an explicit cancel request. In this scenario, Industry Member Broker 1 receives a customer order, and routes the order to an exchange for execution. The exchange accepts the order, then cancels the order without receiving an explicit cancel request. Note that there is a distinction from implicit cancels, such as IOC orders or DFD messages. In these cases, Industry Members are not required to report a cancellation because it is implied by the circumstances.

Since the cancellation was initiated by the exchange, Broker 1 is not required to report a Route Cancelled event. Broker 1 is required to report any action that it takes on the order as a result of the unsolicited cancellation, including a cancellation of the order on its own books and records, as outlined in Option 1.

If the order remains open on Broker 1's books and records after receipt of the unsolicited cancellation, Broker 1 must report any subsequent action on the order, such as a route to another venue, as outlined in Option 2.

Option 1:

Upon cancellation by the exchange, Broker 1 cancels the order on its books and records.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the customer order to the exchange (Order Route event)
- The cancellation of the customer order (Order Cancelled event)

Industry Members are required to capture the *eventTimestamp* in Order Cancelled events reflecting the time the order was cancelled (e.g., the time that the order was confirmed to be cancelled in the firm's OMS/EMS). In this example, the *eventTimestamp* reflects the time that Broker 1 cancelled the order on its books and records after receiving the exchange cancellation. Broker 1 is not required to report a receipt time, as the cancellation was not requested by the customer.

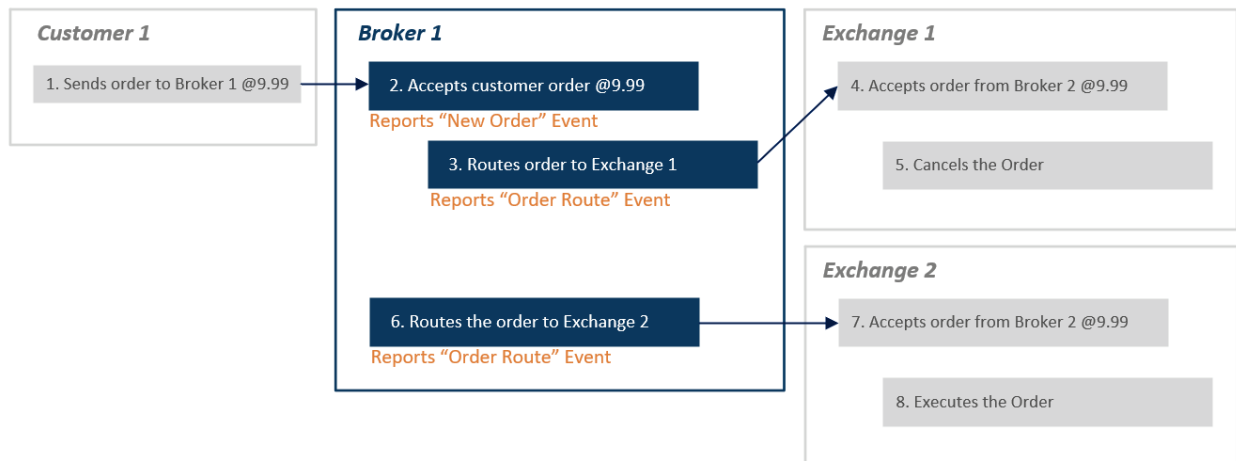

#	Step	Reported Event	Comments
		requestTimestamp:	

Option 2:

Upon cancellation by the exchange, Broker 1 routes the order to another venue.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to Exchange 1 (Order Route event)
- The route of the order to Exchange 2 (Order Route event)

Industry Members are required to capture the *eventTimestamp* in Order Modified events reflecting the time the order was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). In this example, the *eventTimestamp* reflects the time that Broker 1 modified the order on its books and records after receiving the exchange cancellation. Broker 1 is not required to report a receipt time, as the modification was not requested by the customer.

2.7. ATS Reporting Scenarios

This section illustrates the CAT reporting requirements for ATSs. Refer to Section 3.1 of the [CAT Reporting Technical Specifications for Industry Members](#) and [Section H of the CAT FAQs regarding ATSs](#) for additional information.

2.7.1. ATS Cross with One Order on Each Side

This scenario illustrates the CAT reporting requirements when a firm's ATS receives two Industry Member subscriber orders and crosses them.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to the ATS (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to the ATS (Order Route event)

Industry Member ATS A is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The receipt of the order from Broker 2 (Order Accepted event)
- The Cross of Broker 1's order with Broker 2's order (Trade event)

ATSA is not required to link to any non-media trade reports.

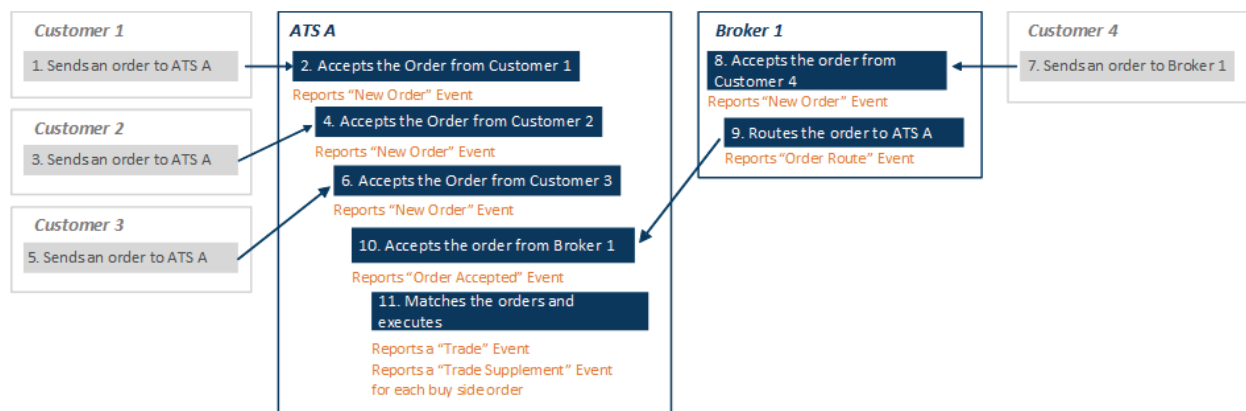

2.7.2. ATS Cross with Multiple Orders on One Side

This scenario illustrates the CAT reporting requirements when an ATS matches as agent the orders of multiple customers on one side with the order of one customer on the other side. If the matches occur in a single execution or a "single event" (e.g., with the press of a button or pursuant to an automated

execution algorithm), and the transaction is reported to the tape as a single transaction (e.g., a single cross), the ATS must report an MEOT event, followed by subsequent MEOTS events.

Sequential executions, even those occurring very close in time, would not be considered a single event and must be reported as separate MEOTs.

This scenario illustrates reporting requirements when using an MEOTS event.

Industry Member Broker 1 is required to report:

- The receipt of Customer 4's order (New Order event)
- The route of the order to the ATS (Order Route event)

Industry Member ATS A is required to report:

- The receipt of Customer 1's order (New Order event)
- The receipt of Customer 2's order (New Order event)
- The receipt of Customer 3's order (New Order event)
- The receipt of Broker 1's order (Order Accepted event)
- Matching of Broker 1's order with Customer 1's Order, Customer 2's Order and Customer 3's Order, and execution (Trade event)
- Side Details of Customer 1's Order (Trade Supplement Event)
- Side Details of Customer 2's Order (Trade Supplement Event)
- Side Details of Customer 3's Order (Trade Supplement Event)

2.7.3. ATS Cross with Multiple Orders on Each Side

This scenario illustrates the CAT reporting requirements when an ATS matches as agent the orders of multiple customers on one side with the orders of multiple customers on the other side. If the matches occur in a single execution or a "single event" (e.g., with the press of a button or pursuant to an automated execution algorithm), and the transaction is reported to the tape as a single transaction (e.g., a single cross), the ATS must report an MEOT event, followed by subsequent MEOTS events.

Sequential executions, even those occurring very close in time, would not be considered a single event and must be reported as a separate MEOT.

This scenario illustrates reporting requirements when using an MEOTS event.

Industry Member Broker 1 is required to report:

- The receipt of Customer 4's order (New Order event)
- The route of the order to the ATS (Order Route events)

Industry Member Broker 2 is required to report:

- The receipt of Customer 5's order (New Order event)
- The route of the order to the ATS (Order Route events)

Industry Member ATS A is required to report:

- The receipt of Customer 1's order (New Order event)
- The receipt of Customer 2's order (New Order event)
- The receipt of Customer 3's order (New Order event)
- The receipt of Broker 1's order (Order Accepted event)
- The receipt of Broker 2's order (Order Accepted event)
- Matching of Broker 1's order and Broker 2's order with Customer 1's Order, Customer 2's Order and Customer 3's Order, and execution (Trade event)
- Side Details of Customer 1's Order (Trade Supplement Event)
- Side Details of Customer 2's Order (Trade Supplement Event)
- Side Details of Customer 3's Order (Trade Supplement Event)
- Side Details of Broker 1's Order (Trade Supplement Event)
- Side Details of Broker 2's Order (Trade Supplement Event)

2.7.4. Order Modification of a PEG Order

This scenario illustrates how an Order Adjusted Event is reported when either a display ATS or a non-display ATS reprices a peg order.

In accordance with [CAT FAQ H1](#), each time an Industry Member reprices a peg order based on a market move (i.e., when there is a change in the national best bid or offer or the best bid or offer on a particular exchange, as applicable based on the terms of the order), the Industry Member must report a price modification of the peg order to the CAT pursuant to Section 6.3(d) of the CAT NMS Plan, as applied to Industry Members by Section 6.4(d)(i) of the CAT NMS Plan, if the price is modified.

If the Industry Member does not reprice a peg order when the market moves, the Industry Member does not need to report a modification of the peg order to the CAT since the order was not modified by either the customer or the Industry Member. For example, for both displayed and non-displayed alternative trading systems (ATSs), if an ATS's matching engine reprices a peg order when the market moves, the price modification must be reported to the CAT. If a matching engine does not reprice a peg order when the market moves, there is no requirement to report a price modification to the CAT.

In this scenario, Industry Member Broker 1 routes a customer midpoint PEG order to ATS A. ATS A gives the order a working price upon receipt. Then the NBBO changes while the order stays open on the book. The ATS reprices the order, which must be reported to CAT.

Industry Member Broker 1 is required to report:

- The receipt of customer order (New Order event)
- The route of the order to the ATS (Order Route event)

Industry Member ATS A is required to report:

- The receipt of the PEG order from Broker 1 (Order Accepted event)
- The modification of the price due to NBBO changes (Order Adjusted Event)

Since only a price change is being reported, ATS A is required to represent the current state of all price fields in its Order Adjusted event. The quantity fields are not required.

The quantity fields are not required.</p> <p>The initiator flag is populated with a value of 'F', as the firm modified the order based on an implicit customer instruction. Refer to CAT FAQ B63 for additional information.</p>

2.7.5. Receipt of PEG Order, Followed by Change in NBBO with No Modification on the Order

In accordance with [CAT FAQ H1](#), each time an Industry Member reprices a peg order based on a market move (i.e., when there is a change in the national best bid or offer or the best bid or offer on a particular exchange, as applicable based on the terms of the order), the Industry Member must report a price modification of the peg order to the CAT pursuant to Section 6.3(d) of the CAT NMS Plan, as applied to Industry Members by Section 6.4(d)(i) of the CAT NMS Plan, if the price is modified.

If the Industry Member does not reprice a peg order when the market moves, the Industry Member does not need to report a modification of the peg order to the CAT since the order was not modified by either the customer or the Industry Member. For example, for both displayed and non-displayed alternative trading systems (ATSS), if an ATS's matching engine reprices a peg order when the market moves, the price modification must be reported to the CAT. If a matching engine does not reprice a peg order when the market moves, there is no requirement to report a price modification to the CAT.

In this scenario, an ATS receives a buy order with a primary peg instruction and a limit price of \$10. The order is not displayable or routable and the ATS has no sell orders that are eligible to trade with the buy order. The NBB subsequently moves to 9.99 and the ATS receives no other sell orders that are eligible to trade with the buy order. The ATS takes no action on the open buy order when the NBB moves to 9.99, therefore there is no CAT reportable event.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to the ATS (Order Route event)

Industry Member ATS A report:

- The receipt of the PEG order from Broker 1 (Order Accepted Event)

6	The ATS does not re-price the order	NA	Since the ATS did not re-price the order, an MEOJ is not required.

2.7.6. Crossing of PEG Order after a Change in NBBO with No Modification on the Order

In accordance with [CAT FAQ H1](#), each time an Industry Member reprices a peg order based on a market move (i.e., when there is a change in the national best bid or offer or the best bid or offer on a particular exchange, as applicable based on the terms of the order), the Industry Member must report a price modification of the peg order to the CAT pursuant to Section 6.3(d) of the CAT NMS Plan, as applied to Industry Members by Section 6.4(d)(i) of the CAT NMS Plan, if the price is modified.

If the Industry Member does not reprice a peg order when the market moves, the Industry Member does not need to report a modification of the peg order to the CAT since the order was not modified by either the customer or the Industry Member. For example, for both displayed and non-displayed alternative trading systems (ATSs), if an ATS's matching engine reprices a peg order when the market moves, the price modification must be reported to the CAT. If a matching engine does not reprice a peg order when the market moves, there is no requirement to report a price modification to the CAT.

In this scenario, An ATS receives a buy order with mid-point peg instruction when the NBBO is 9.85 x 10. The order is not displayable or routable and the ATS has no sell orders that are eligible to trade with the buy order. The NBBO subsequently moves to 9.90 x 10. The ATS then receives a market order to sell that is eligible to trade with the buy order and the two orders are crossed at 9.95. Because the ATS did not re-price the buy order prior to executing it, there is no CAT reportable event required to reflect a price modification of the buy order to 9.95.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to the ATS (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to the ATS (Order Route event)

Industry Member ATS A must report:

- The receipt of the PEG order from Broker 1 (Order Accepted event)
- The receipt of the Market order from Broker 2 (Order Accepted event)
- The Cross of Broker 1's order with Broker 2's order (Trade event)

2.7.7. Display Modifications of a Display ATS

Display modifications can be reported to CAT using the Order Adjusted event. This scenario illustrates the CAT reporting requirements when an order is partially executed on an ATS, and as a result the display size of the order changes. In this scenario, an order is routed to an ATS for execution.

This example illustrates the display modification reporting, and does not reflect subsequent order handling.

Industry Member Broker 1 is required to report:

- Receipt of the customer order (New Order event)
- The route of the order to ATS A (Order Route event)

Industry Member ATS A is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The partial execution of the order (Trade event)
- The update to the display size post execution (Order Adjusted event)

Since only a quantity change is being reported, ATSA is required to represent the current state of all quantity fields in its Order Adjusted event. The price fields are not required.

2.8. OTC Reporting Scenarios

This section illustrates the CAT reporting requirements for OTC securities. Refer to [Section J of the CAT FAQs regarding OTC Securities](#) for additional information.

2.8.1. Trade Negotiated over the Phone

This scenario illustrates the CAT reporting requirements when a Market Maker executes an order as the result of a negotiation with another Industry Member over the phone. In this scenario, Broker 2 calls Market Maker 1 and negotiates a trade. Market Maker 1 reports its side of the trade to the ORF as the executing party, and Broker 2 reports its side of the trade to the ORF as the contra party. The two sides of the trade are matched by the ORF and sent for clearing.

Industry Member Market Maker 1 is required to report the following:

- A proprietary new buy order (New Order event)
- An execution linking to its ORF trade report (Trade event)

Industry Member Broker 2 is required to report the following:

- A new proprietary sell (New Order event)
- An execution linking to its ORF trade report (Trade event)

All of the New Order and Trade events occurring as a result of the negotiation must have the *negotiatedTradeFlag* and *sideDetailsInd* fields present and marked properly. Both Trade events reported by Market Maker 1 and Broker 2 must link to their ORF report.

The negotiation between Market Maker 1 and Broker 2 is not reportable to CAT.

2.8.2. Trade Executed as a Result of an OTC Link ATS Message

This scenario illustrates the CAT reporting requirements when a Market Maker (IMID:MMA) executes an order after receiving an OTC Link Message from another Industry Member (IMID:BRKB).

In this scenario, Market Maker 1 is quoting symbol XYZ on OTC Link ATS to buy 1,000 shares at 1.15. OTC Link ATS subscriber and Industry Member Broker 2 sends an OTC Link ATS message electronically (i.e. via FIX) to Market Maker 1 indicating that the price is not negotiable. Market Maker 1 and executes the trade (3,000 shares at 1.14), and reports the trade to the ORF.

For the quote sent to OTC Link ATS:

- Market Maker 1 is required to report the following:
 - ♦ The origination of the quote (New Quote event)
 - ♦ The route of the quote to OTC Link ATS (Routed Quote event)
- OTC Link ATS is required to report the following:
 - ♦ Receipt of the quote from Market Maker 1 (Quote Received event)

For the order sent from Broker 2 to Market Maker 1 via OTC Link ATS based on the posted quote:

- Broker 2 is required to report the following:
 - ♦ The origination of a new proprietary order to sell 3,000 shares @1.15 (New Order event)

- ♦ The route of the order to Market Maker 1 via OTC Link ATS (Order Route event to OTC Link ATS with *handlingInstructions* value 'DLVT:MMA' and 'NCTR')
- OTC Link ATS is required to report the following:
 - ♦ The receipt of the order from Broker 2 (Order Accepted event with a *handlingInstructions* value of 'DLVT:MMA' and 'NCTR')
 - ♦ The route of the order to Market Maker 1 (Order Route event with a *handlingInstructions* value of 'DLVF:BRKB' and 'NCTR', and a *quoteID* linking to the related MEQR event)
- Market Maker 1 is required to report the following:
 - ♦ The order received from Broker 2 via OTC Link ATS (Order Accepted event from OTC Link ATS with *handlingInstructions* value 'DLVF:BRKB' and 'NCTR')
 - ♦ The execution of the order from the firm's prop account (Trade event linking to the ORF report)

On Order Route events to OTC Link ATS, along with the corresponding Order Accepted event received by OTC Link ATS, a *handlingInstructions* value of 'DLVT' must be populated indicating the IMID of the party the route is being delivered to. On Order Accepted events received from OTC Link ATS, along with the corresponding Order Route event sent by OTC Link ATS, a *handlingInstructions* value of 'DLVF' must be populated indicating the IMID of the party the route is being delivered from. Orders where the price is not negotiable must be marked with a *handlingInstructions* value of 'NCTR'.

If a route is sent from an Industry Member to a quote posted by a market maker, OTC Link ATS must populate the *quoteID* of the related Quote Received event in its Order Route event. The *quoteID* is not required to be populated on events representing counter messages that were not directed to a posted quote.

2.8.3. Trade Executed as a Result of an OTC Link ATS Counter Message

This scenario illustrates the CAT reporting requirements when a Market Maker (IMID:MMA) executes an order after receiving an OTC Link Message from another Industry Member (IMID:BRKB).

In this scenario, Market Maker 1 is quoting symbol XYZ on OTC Link ATS to buy 1,000 shares at 1.15. OTC Link ATS subscriber and Industry Member Broker 2 sends an OTC Link ATS message electronically (i.e. via FIX) to Market Maker 1 indicating that the price is negotiable. Broker 2 ultimately accepts a counter offer from Market Maker 1 and executes the trade (3,000 shares at 1.14), and reports the trade to the ORF.

For the quote sent to OTC Link ATS:

- Market Maker 1 is required to report the following:
 - ♦ The origination of the quote (New Quote event)
 - ♦ The route of the quote to OTC Link ATS (Routed Quote event)
- OTC Link ATS is required to report the following:
 - ♦ Receipt of the quote from Market Maker 1 (Quote Received event)

For the order sent from Broker 2 to Market Maker 1 via OTC Link ATS based on the posted quote:

- Broker 2 is required to report the following:
 - ♦ The origination of a new proprietary order to sell 3,000 shares @1.15 (New Order event)

- ♦ The route of the order to Market Maker 1 via OTC Link ATS (Order Route event to OTC Link ATS with *handlingInstructions* value 'DLVT:MMA')
- OTC Link ATS is required to report the following:
 - ♦ The receipt of the order from Broker 2 (Order Accepted event with a *handlingInstructions* value of 'DLVT:MMA')
 - ♦ The route of the order to Market Maker 1 (Order Route event with a *handlingInstructions* value of 'DLVF:BRKB', and a *quoteID* linking to the related MEQR event)
- Market Maker 1 is required to report the following:
 - ♦ The order received from Broker 2 via OTC Link ATS (Order Accepted event from OTC Link ATS with *handlingInstructions* value 'DLVF:BRKB')
 - ♦ The decline of the message received from Broker 2 (Order Cancelled event)

For the counter sent from Market Maker 1 to Broker 2 via OTC Link ATS:

- Market Maker 1 is required to report the following:
 - ♦ The origination of a new proprietary order to sell 3,000 shares @ 1.14 (New Order event with *handlingInstructions* value 'CTR')
 - ♦ The route of the order to Broker 2 via OTC Link ATS (Order Route event to OTC Link ATS with *handlingInstructions* value 'DLVT:BRKB' and 'CTR')
- OTC Link ATS is required to report the following:
 - ♦ The receipt of the order from Market Maker 1 (Order Accepted event with a *handlingInstructions* value of 'DLVT:BRKB' and 'CTR')
 - ♦ The route of the order to Broker 2 (Order Route event with a *handlingInstructions* value of 'DLVF:BRKB')
- Broker 2 is required to report the following:
 - ♦ The receipt of the order via OTC Link ATS (Order Accepted event from OTC Link ATS with *handlingInstructions* value 'DLVF:MMA')
 - ♦ The execution of the order from the firm's prop account (Trade event linking to the ORF report)

On Order Route events to OTC Link ATS, along with the corresponding Order Accepted event received by OTC Link ATS, a *handlingInstructions* value of 'DLVT' must be populated indicating the IMID of the party the route is being delivered to. On Order Accepted events received from OTC Link ATS, along with the corresponding Order Route event sent by OTC Link ATS, a *handlingInstructions* value of 'DLVF' must be populated indicating the IMID of the party the route is being delivered from.

Messages that are received and declined by an Industry Member must be captured as an Order Cancelled event. If no action is taken on the message, or the message is received and left to expire, an Order Cancelled event is not required.

Orders that are originated and routed via OTC Link ATS as a counter message must contain a *handlingInstructions* value of 'CTR', along with the related Order Accepted event received by OTC Link ATS.

If a route is sent from an Industry Member to a quote posted by a market maker, OTC Link ATS must populate the *quoteID* of the related Quote Received event in its Order Route event. The *quoteID* is not required to be populated on events representing counter messages that were not directed to a posted quote.

2.8.4. Customer Order Executed as a Result of an OTC Link ATS Message

This scenario illustrates the CAT reporting requirements when a Market Maker (IMID:MMA) receives a customer order then submits an unsolicited displayed (bid) quote to OTC Link Message, and the order is executed as a result of an OTC Link Message received from another Broker-Dealer (IMID:BRKB).

In this scenario, Market Maker 1 receives a customer order and submits an unsolicited displayed quote in symbol XYZ on OTC Link ATS to buy 1,000 shares at 1.15 based on the customer order. OTC Link ATS subscriber and Industry Member Broker 2 sends an OTC Link ATS message electronically (i.e. via FIX) to trade at the quoted price. Market Maker 1 executes the trade and reports the trade to the ORF.

For the quote sent to OTC Link ATS:

- Market Maker 1 is required to report the following:
 - ♦ The origination of the quote (New Quote event)
 - ♦ The route of the quote to OTC Link ATS (Routed Quote event)
- OTC Link ATS is required to report the following:
 - ♦ Receipt of the quote from Market Maker 1 (Quote Received event)

For the customer order and the order sent from Broker 2 to Market Maker 1 via OTC Link ATS based on the posted quote:

- Broker 2 is required to report the following:
 - ♦ The origination of a new proprietary order to sell 3,000 shares @1.15 (New Order event)
 - ♦ The route of the order to Market Maker 1 via OTC Link ATS (Order Route event to OTC Link ATS with *handlingInstructions* value 'DLVT:MMA')
- OTC Link ATS is required to report the following:
 - ♦ The receipt of the order from Broker 2 (Order Accepted event with a *handlingInstructions* value of 'DLVT:MMA')
 - ♦ The route of the order to Market Maker 1 (Order Route event with a *handlingInstructions* value of 'DLVF:BRKB', and a *quoteID* linking to the related MEQR event)
- Market Maker 1 is required to report the following:
 - ♦ The receipt of the customer order (New Order event)
 - ♦ The order received from Broker 2 via OTC Link ATS (Order Accepted event from OTC Link ATS with *handlingInstructions* value 'DLVF:BRKB')
 - ♦ The execution of the customer order against the order from Broker 2 (Trade event linking to the ORF report)

On Order Route events to OTC Link ATS, along with the corresponding Order Accepted event received by OTC Link ATS, a *handlingInstructions* value of 'DLVT' must be populated indicating the IMID of the party the route is being delivered to. On Order Accepted events received from OTC Link ATS, along with the corresponding Order Route event sent by OTC Link ATS, a *handlingInstructions* value of 'DLVF' must be populated indicating the IMID of the party the route is being delivered from.

If a route is sent from an Industry Member to a quote posted by a market maker, OTC Link ATS must populate the *quoteID* of the related Quote Received event in its Order Route event. The *quoteID* is not required to be populated on events representing counter messages that were not directed to a posted quote.

2.8.5. Representative Order Executed as a Result of an OTC Link Message

This scenario illustrates the CAT reporting requirements when a Market Maker (IMID:MMA) receives a customer order and chooses to handle the customer order by generating a representative order to facilitate the execution. The Market Maker then submits an unsolicited displayed (bid) quote to OTC Link Message, and the order is executed as the result of an OTC Link Message received from another Broker-Dealer (IMID:BRKB). In this scenario, the customer order is filled on a Riskless Principal basis.

In this scenario, Market Maker 1 receives a customer order, and generates a representative order to facilitate the execution. Market Maker 1 submits an unsolicited displayed quote in symbol XYZ on OTC Link ATS to buy 1,000 shares at 1.15 based on the customer order. OTC Link ATS subscriber and Industry Member Broker 2 sends an OTC Link ATS message electronically (i.e. via FIX) to trade at the quoted price. Market Maker 1 executes the trade and reports the trade to the ORF, then fills the customer order.

For the quote sent to OTC Link ATS:

- Market Maker 1 is required to report the following:
 - ♦ The origination of the quote (New Quote event)
 - ♦ The route of the quote to OTC Link ATS (Routed Quote event)

- OTC Link ATS is required to report the following:
 - ♦ Receipt of the quote from Market Maker 1 (Quote Received event)

For the customer order, representative order, and the order sent from Broker 2 to Market Maker 1 via OTC Link ATS based on the posted quote:

- Broker 2 is required to report the following:
 - ♦ The origination of a new proprietary to sell 3,000 shares @1.15 (New Order event)
 - ♦ The route of the order to Market Maker 1 via OTC Link ATS (Order Route event to OTC Link ATS with *handlingInstructions* value 'DLVT:MMA')
- OTC Link ATS is required to report the following:
 - ♦ The receipt of the order from Broker 2 (Order Accepted event with a *handlingInstructions* value of 'DLVT:MMA')
 - ♦ The route of the order to Market Maker 1 (Order Route event with a *handlingInstructions* value of 'DLVF:BRKB', and a *quoteID* linking to the related MEQR event)
- Market Maker 1 is required to report the following:
 - ♦ The receipt of the customer order (New Order event)
 - ♦ The generation of a representative order (New Order event)
 - ♦ The order received from OTC Link ATS via Broker 2 (Order Accepted event from OTC Link ATS with *handlingInstructions* value 'DLVF:BRKB')
 - ♦ The execution of the representative order against the order from Broker 2 (Trade event linking to the ORF report)
 - ♦ The fill of the customer order from the representative order (Order Fulfillment event)

On Order Route events to OTC Link ATS, along with the corresponding Order Accepted event received by OTC Link ATS, a *handlingInstructions* value of 'DLVT' must be populated indicating the IMID of the party the route is being delivered to. On Order Accepted events received from OTC Link ATS, along with the corresponding Order Route event sent by OTC Link ATS, a *handlingInstructions* value of 'DLVF' must be populated indicating the IMID of the party the route is being delivered from.

If a route is sent from an Industry Member to a quote posted by a market maker, OTC Link ATS must populate the *quoteID* of the related Quote Received event in its Order Route event. The *quoteID* is not required to be populated on events representing counter messages that were not directed to a posted quote.

Reporting requirements for representative orders in OTC securities are the same as for NMS securities. Refer to Appendix C of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

2.8.6. Fill of a Customer Order at a Previously Displayed Quote

This scenario illustrates the CAT reporting requirements when a Market Maker (IMID:MMA) displays a quote unrelated to any customer order flow. The Industry Member Broker 2 (IMID:BRKB) creates a proprietary order and sends a trade message to Market Maker 1. Before the proprietary order is executed, Broker 2 receives a customer order.

In this scenario, Market Maker 1 is quoting symbol XYZ on OTC Link ATS to buy 1,000 shares at 1.15. OTC Link ATS subscriber and Industry Member Broker 2 sends an OTC Link ATS message electronically (i.e. via FIX) to Market Maker 1 to trade at the posted quote. After sending the order, Broker 2 receives a customer order to sell 1,000 shares at 1.15. Market Maker 1 executes the trade (1,000 shares at 1.15), and reports the trade to the ORF. Broker 2 then fills the customer order.

For the quote sent to OTC Link ATS:

- Market Maker 1 is required to report the following:
 - ♦ The origination of the quote (New Quote event)
 - ♦ The route of the quote to OTC Link ATS (Routed Quote event)
- OTC Link ATS is required to report the following:
 - ♦ Receipt of the quote from Market Maker 1 (Quote Received event)

For the customer order and the order sent from Broker 2 to Market Maker 1 via OTC Link ATS based on the posted quote:

- Broker 2 is required to report the following:
 - ♦ The origination of a new proprietary order to sell 3,000 shares @1.15 (New Order event)
 - ♦ The route of the order to Market Maker 1 via OTC Link ATS (Order Route event to OTC Link ATS with *handlingInstructions* value 'DLVT:MMA')
 - ♦ The receipt of the customer order (New Order event)
 - ♦ The fill of the customer order (Order Fulfillment event)
- OTC Link ATS is required to report the following:

- ♦ The receipt of the order from Broker 2 (Order Accepted event with a *handlingInstructions* value of 'DLVT:MMA')
- ♦ The route of the order to Market Maker 1 (Order Route event with a *handlingInstructions* value of 'DLVF:BRKB', and a *quoteID* linking to the related MEQR event)
- Market Maker 1 is required to report the following:
 - ♦ The order received from Broker 2 via OTC Link ATS (Order Accepted event from OTC Link ATS with *handlingInstructions* value 'DLVF:BRKB')
 - ♦ The execution of Broker 2's order from a prop account (Trade event linking to the ORF report)

On Order Route events to OTC Link ATS, along with the corresponding Order Accepted event received by OTC Link ATS, a *handlingInstructions* value of 'DLVT' must be populated indicating the IMID of the party the route is being delivered to. On Order Accepted events received from OTC Link ATS, along with the corresponding Order Route event sent by OTC Link ATS, a *handlingInstructions* value of 'DLVF' must be populated indicating the IMID of the party the route is being delivered from.

If a route is sent from an Industry Member to a quote posted by a market maker, OTC Link ATS must populate the *quoteID* of the related Quote Received event in its Order Route event. The *quoteID* is not required to be populated on events representing counter messages that were not directed to a posted quote.

Reporting requirements for representative orders in OTC securities are the same as for NMS securities. Refer to Appendix C of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

2.8.7. OTC Link Messages Directed by an OTC Link ATS Subscriber to a Global OTC Quote

This scenario illustrates the CAT reporting requirements when an OTC Link message is directed by an OTC Link ATS subscriber to a Global OTC quote.

In this example, the Global OTC best bid is 1.15. OTC Link ATS displays this to its subscribers. Industry Member Broker 1 originates a proprietary order and sends an OTC Link ATS message directed to Global OTC's quote. OTC Link ATS, on behalf of Industry Member Broker 1, creates a FIX order message and routes the order to Global OTC. Global OTC accepts the order, executes the trade, and reports the trade to the ORF.

In accordance with [FAQ J3](#), Industry Member Broker 1 is required to report:

- The origination of the proprietary order (New Order event)
- The route of the proprietary order to Global OTC via OTC Link ATS (Order Route event with *handlingInstructions* value 'DIR')

In accordance with [FAQ J3](#), OTC Link ATS is required to report:

- The receipt of the proprietary order from Broker 1 (Order Accepted event with *handlingInstructions* value 'DIR')
- The route of the order to Global OTC (Order Route event with *handlingInstructions* value 'DIR')

In accordance with [FAQ J3](#), Global OTC is required to report:

- The receipt of the order from Industry Member Broker 1 via OTC Link ATS (Order Accepted event)
- The execution linking to the ORF trade report (Trade event)

On Order Route events to OTC Link ATS, along with the corresponding Order Accepted event received by OTC Link ATS, a *handlingInstructions* value of 'DIR' must be populated. On Order Accepted events received from OTC Link ATS, along with the corresponding Order Route event sent by OTC Link ATS, a *handlingInstructions* value of 'DIR' must also be populated.

In accordance with [FAQ J3](#), Industry Member Broker 1 is required to report the new order and route to OTC Link ATS even if the order is not ultimately executed.

2.9. Foreign Scenarios

This section illustrates the CAT reporting requirements when an Industry Member routes an order to a foreign destination for execution. These scenarios assume that the related security is CAT reportable in accordance with [Section I of the CAT FAQs regarding Foreign Securities](#).

2.9.1. Route to a Foreign Broker-Dealer

This scenario illustrates the CAT reporting requirements when an Industry Member routes an order to another Industry Member, who routes the order to an affiliated foreign broker-dealer. Since the foreign broker-dealer is not a CAT reporter and the execution was not reported for public dissemination purposes

in the United States, the Industry Member must report an Order Fulfillment event to represent the outcome of the customer order.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to Broker 2 (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The route of the customer order to the affiliated foreign broker-dealer (Order Route event)
- The outcome of the order (Order Fulfillment event)

When reporting Order Fulfillment events for orders that were routed to a foreign broker-dealer, *firmDetails* are not required. While this scenario reflects the fill of a customer order on a foreign market, the same requirement to report an Order Fulfillment event would apply if the order were proprietary.

2.9.2. Customer Order is Routed to a Foreign Affiliate, and the Foreign Affiliate Executes the Order on a Net Basis

This scenario illustrates the CAT reporting requirements when an Industry Member receives an order from its customer to buy a foreign security and routes the order to a non-member foreign affiliate for execution. The foreign affiliate executes the order in the foreign market and the transaction is reported by the foreign market. The foreign affiliate sells the security to the Industry Member at a different price than the price reported in the foreign market. The Industry Member fills the customer order at the same price at which it bought the security from its foreign affiliate (except for any change in price due to currency conversion).

Since the price given to the Industry Member by the foreign affiliate was different than the price that the foreign affiliate received on the foreign market, the Industry Member is required to submit a media trade report to a TRF in the United States. In the TRF report, the FINRA member firm will be identified as the executing firm on the trade report with a blank contra.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to its foreign affiliate (Order Route event)
- The execution of the order in the foreign market (one-sided Trade event linking to the TRF report with a *sideDetailsInd* of 'BUY')

Broker 1 is required to report the execution of the order on the foreign market using a Trade event with linkage to the TRF report. Broker 1 is only required to report its own side of the execution in the Trade event side details. The *sideDetailsInd* field must be populated with a value of 'BUY', indicating that the Trade event is one sided, and that only the *buyDetails* will be populated.

#	Step	Reported Event	Comments

		quantity: 300 orderType: LMT timeInForce: DAY=20170801 tradingSession: FOR affiliateFlag: true isoInd: NA	
5	Foreign affiliate accepts the order from Broker 1 and executes the order in the foreign market @9.97	NA	This transaction is reported by to the foreign market.
6	Foreign affiliate sells the shares to Broker 1 @10.01	NA	Since the foreign affiliate received a price of 9.97 on the foreign market, and sold the shares to Broker 1 a price of 10.01, Broker 1 is required to report a media trade report in the US.
7	Broker 1 reports the trade to the TRF and reports a one-sided Trade event @10.01	<i>Broker 1 reports a Trade event</i> type: MEOT tradeKeyDate: 20170801T000000 tradeID: TXYZ125 symbol: XYZ eventTimestamp: 20170801T143035.53456 manualFlag: false cancelFlag: false cancelTimestamp: quantity: 300 price: 10.01 capacity: A tapeTradeID: TRF123 marketCenterID: DN sideDetailsInd: BUY buyDetails: orderKeyDate: 20170801T000000 orderID: O12345 side: B	<p>Since Broker 1 reported the trade to the TRF, Broker 1 must populate all relevant fields required to link to the related trade report.</p> <p>In this scenario, Broker 1 is only required to report its own side in the Trade event side details. The <i>sideDetailsInd</i> field must be populated with a value of 'BUY' indicating that only the <i>buyDetails</i> are populated.</p>

2.9.3. Customer Order is Routed to a Foreign Broker-Dealer and Executed on a Riskless Principal Basis

This scenario illustrates the CAT reporting requirements when an Industry Member routes a customer order on a Riskless Principal basis to a foreign broker-dealer for execution. In this scenario, the Industry

Member receives a customer order and generates a representative order, then routes the representative order to a foreign broker-dealer.

The foreign broker-dealer executes the order in the foreign market and the transaction is reported by the foreign market. The foreign broker-dealer sells the security to the Industry Member at the same price that was reported in the foreign market. The Industry Member fills the customer order at the same price at which it bought the security from its foreign affiliate (except for any change in price due to currency conversion).

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The generation of a representative order (New Order event)
- The route of the representative order (Order Route event)
- The execution representative order (Order Fulfillment event with a *fulfillmentLinkType* of 'FOR')
- The fill of the customer order (Order Fulfillment event with a *fulfillmentLinkType* of 'Y')

firmDetails are not required on Order Fulfillment events with a *fulfillmentLinkType* of 'FOR' representing orders that were routed to a foreign broker-dealer.

2.9.4. Industry Member Routes an Order in an OTC Equity Symbol of a Foreign Security to Another Industry Member with Discretion on Where to Execute

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 routes an order in an OTC equity symbol of a foreign security to another Industry Member Broker 2, and Broker 2 has discretion on how to execute the order. Broker 2 then chooses to route the order to a foreign market for execution. Broker 1 is unaware of the outcome of the order and therefore has an obligation to report to CAT in accordance with [FAQs 12](#) and [14](#). However, Broker 2 knows that the order was executed and trade reported on a foreign market, and does not have an obligation to report to CAT in accordance with [FAQ 17](#).

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to Broker 2 (Order Route event with *destinationType* 'O')

While Broker 2 may optionally report this activity to CAT, it does not have a CAT reporting obligation in accordance with [FAQ 17](#).

Broker 1 may populate a *destinationType* value of 'O' on its Order Route event to Broker 2. When *destinationType* 'O' is populated, linkage will be attempted on the Order Route event. After linkage is attempted, if no link is found, the firm will not receive an unlinked error.

#	Step	Reported Event	Comments

When <i>destinationType</i> 'O' is populated, linkage will be attempted on the Order Route event. After linkage is attempted, if no link is found, the firm will not receive an unlinked error.
4	Broker 2 accepts the order from Broker 1	NA	Broker 2 knows that the order was executed and trade reported on a foreign market and does not have an obligation to report this activity to CAT.
5	Broker 2 routes the customer order to a foreign market for execution	NA	Broker 2 knows that the order was executed and trade reported on a foreign market and does not have an obligation to report this activity to CAT.

2.9.5. Industry Member Routes an Order in an OTC Equity Symbol of a Foreign Security to Another Industry Member with Instructions to Execute on a Foreign Market

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 routes an order in an OTC equity symbol of a foreign security to another Industry Member Broker 2 with instructions to direct the order to a foreign market for execution. In accordance with [FAQ I6](#), neither Broker 1 nor Broker 2 have an obligation to report this activity to CAT. However, Broker 2 chooses to optionally report this activity.

Industry Member Broker 2 optionally reports:

- The receipt of the order from Broker 1 (Order Accepted event with *senderType* 'O')
- The route of the order to the foreign market (Order Route event)
- The outcome of the order (Order Fulfillment event)

While Broker 1 may also optionally report this activity to CAT, it does not have a CAT reporting obligation in accordance with [FAQ 17](#).

Broker 2 may populate a *senderType* value of 'O' on its Order Accepted event from Broker 1. When *senderType* 'O' is populated, linkage will be attempted on the Order Accepted event. After linkage is attempted, if no link is found, the firm will not receive an unlinked error.

2.10. Electronic Duplicate Scenarios

This section illustrates the CAT reporting requirements when an Industry Member routes or receives an order manually and then subsequently sends or receives an electronic message to represent the manual instruction. Refer to Section 3.2.2 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

2.10.1. Manual Order Route Followed by Electronic Route, Merged Event

This scenario illustrates the CAT reporting requirements when an Industry Member manually routes an order to another Industry Member and follows up with an electronic route message. In this scenario, both parties report a ‘merged’ event.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to Broker 2 (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)

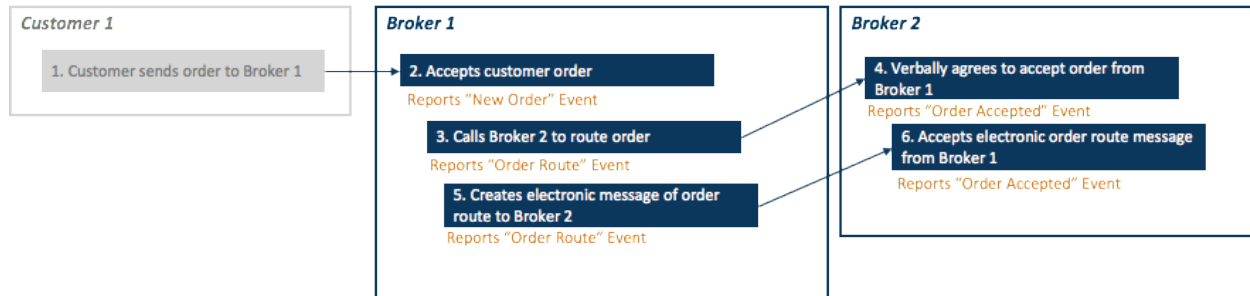

When reporting a 'merged' event, Industry Members are required to report both the *eventTimestamp* and the *electronicTimestamp*, along with a *routedOrderID*. The *electronicDupFlag* must be set to 'false' and the *manualFlag* must be set to 'true' on a 'merged' event.

The <i>eventTimestamp</i> on the Order Accepted event must capture the time at which Broker 2 agreed to take the order from Broker 1 in step 4 (with granularity to at least seconds). The <i>electronicTimestamp</i> must be the time at which the electronic route was received and must be reported to millisecond granularity.

2.10.2. Manual Order Route, Electronic Duplicate Order

This scenario illustrates the reporting requirements when an Industry Member manually routes an order but is unable to merge the manual and electronic copies of the order into a single message for CAT Reporting.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The manual route to Broker 2 (Order Route event)
- The electronic route message sent to Broker 2 (Order Route event with *electronicDupFlag* populated as 'true')

Industry Member Broker 2 is required to report:

- The receipt of the route from Broker 1 (Order Accepted event)
- The receipt of the electronic route message from Broker 1 (Order Accepted event with *electronicDupFlag* populated as 'true')

When reporting the electronic duplicate event, the *electronicDupFlag* must be populated as 'true', and the *manualFlag* must be populated as 'false'. The *routedOrderID* field is not required on the events reflecting the manual route by Broker 1 and the manual receipt by Broker 2, but is required on the events reflecting the receipt of the duplicate electronic message. The *orderID* on the event reflecting the manual order receipt by Broker 2 must not be the same as the *orderID* on the event reflecting the receipt of the duplicate electronic message.

Industry Members are required to populate the *manualOrderID* field on the electronic duplicate event identifying the *orderID* of the related manual order. The *manualOrderKeyDate* must also be populated in order to generate a Manual Order Key to link to the electronic duplicate event to the original manual event.

The <i>manualOrderKeyDate</i> must also be populated.</p>

2.10.3. Manual Order, One Side Reports Merged Event

This scenario illustrates the reporting requirements when an Industry Member manually routes an order to another Industry Member. The routing Industry Member chooses to report a single 'merged' order event with both an *eventTimestamp* and an *electronicTimestamp*, and the receiving Industry Member reports separate events for the receipt of the manual order and the receipt of the electronic message.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to Broker 2 (Order Route event)

When reporting a 'merged' event, Broker 1 is required to report both the *eventTimestamp* and the *electronicTimestamp*, along with a *routedOrderID*. The *electronicDupFlag* must be set to 'false' and the *manualFlag* must be set to 'true' on the 'merged' event.

Industry Member Broker 2 is required to report:

- The manual receipt of the order from Broker 1 (Order Accepted event)
- The receipt of the electronic route message from Broker 1 (Order Accepted event with *electronicDupFlag* populated as 'true')

When reporting the electronic duplicate event, Broker 2 is required to populate the *electronicDupFlag* as 'true', and the *manualFlag* as 'false'. The *routedOrderID* field is not required on the event reflecting the manual receipt of the order, but is required on the event reflecting the receipt of the duplicate electronic message. The *orderID* on the event reflecting the manual order receipt by Broker 2 must not be the same as the *orderID* on the event reflecting the receipt of the duplicate electronic message.

Broker 2 is required to populate the *manualOrderID* field on electronic duplicate events identifying the *orderID* of the related manual order. The *manualOrderKeyDate* must also be populated in order to generate a Manual Order Key to link to the electronic duplicate event to the original manual event.

2.11. Child Order Scenarios

This section illustrates the CAT reporting requirements when an order is sliced within the desk or department it is being worked. Child Order events are not required to be reported to CAT, but are provided for the convenience of Industry Members to help model these types of order handling scenarios. Refer to Section 4.6 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

2.11.1. Industry Member Creates Child Orders and Routes

This scenario illustrates the CAT reporting requirements when an Industry Member receives a customer order and splits the customer order into multiple child orders before further handling. This scenario illustrates the reporting requirements for generating child orders, and does not reflect further order handling.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The generation of each child order (Child Order event)
- The route of each child order (Order Route event)

Industry Members Broker 2 and 3 are required to report:

- The receipt of each order from Broker 1 (Order Route event)

2.11.2. Industry Member Creates Multiple Branches of Child Orders

This scenario illustrates the CAT reporting requirements when an order is handled at multiple desks within an Industry Member, and each desk has chosen to work an order by splitting the original order into multiple child orders. This scenario illustrates the reporting requirements for generating child orders, and does not reflect further order handling.

Industry Member Broker 1 must report the following for each desk:

- At the Sales Desk:
 - ♦ The receipt of the customer (New Order event)
 - ♦ The generation of each child order (Child Order events)
- At the Arbitrage Desk:
 - ♦ The receipt of the internal route from the Sales Desk (Order Internal Route Accepted event)

- ♦ The generation of each child order (Child Order events)
- ♦ The route of each child order (Order Route event)
- At the Trading Desk:
 - ♦ The receipt of the internal route from the Sales Desk (Order Internal Route Accepted event)
- At the Program Trading desk:
 - ♦ The receipt of the internal route from the Trading Desk (Order Internal Route Accepted event)

2.11.3. Industry Member Creates Child Orders then Cancels the Parent order

This scenario illustrates the CAT reporting requirements when an Industry Member originates a proprietary order and splits the order into multiple child orders. The Industry Member then decides to cancel the parent order. While the Industry Member is required to report an Order Cancelled event reflecting the cancellation of the parent order, the Industry Member is also required to report a Child Order Cancelled event for each related Child Order.

Industry Member Broker 1 is required to report:

- The origination of the proprietary order (New Order event)
- The generation of each child order (Child Order events)
- The cancellation of the parent order (Order Cancelled event)
- The cancellation of each child order (Child Order Cancelled event)

2.11.4. Industry Member Generates a Representative Order then Creates Child Orders

This scenario illustrates the CAT reporting requirements when an Industry Member receives a customer order, and then generates a representative order to facilitate the execution of the customer order. The Industry Member then generates multiple child orders off the representative order, which are routed to the exchange. The customer order is filled on a print for print basis as executions occur against the representative child orders on the exchange. Upon receipt of each fill, an Order Fulfillment event is reported for the customer order. The *firmDetails* on the Order Fulfillment events should reflect the *orderID* of the representative order.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)

- The generation of the representative order (New Order event)
- The creation of each child order for (Child Order events)
- The route of each child order to the exchange (Order Route events)
- The fill of the original customer order on a print for print basis (Order Fulfillment events)

2.12. Proprietary Order Scenarios

This section illustrates the CAT reporting requirements for proprietary orders.

2.12.1. Unsolicited Cancellation of a Proprietary Order by an Exchange

This scenario illustrates the CAT reporting requirements when an Industry Member routes a proprietary order to an exchange and the exchange cancels the order without receiving an explicit cancel request. In this scenario, Industry Member Broker 1 receives a proprietary order, and routes the order to an exchange for execution. The exchange accepts the order, then cancels the order without receiving an explicit cancel request. The requirements in this scenario would be the same if the order had been routed to another Industry Member rather than an exchange.

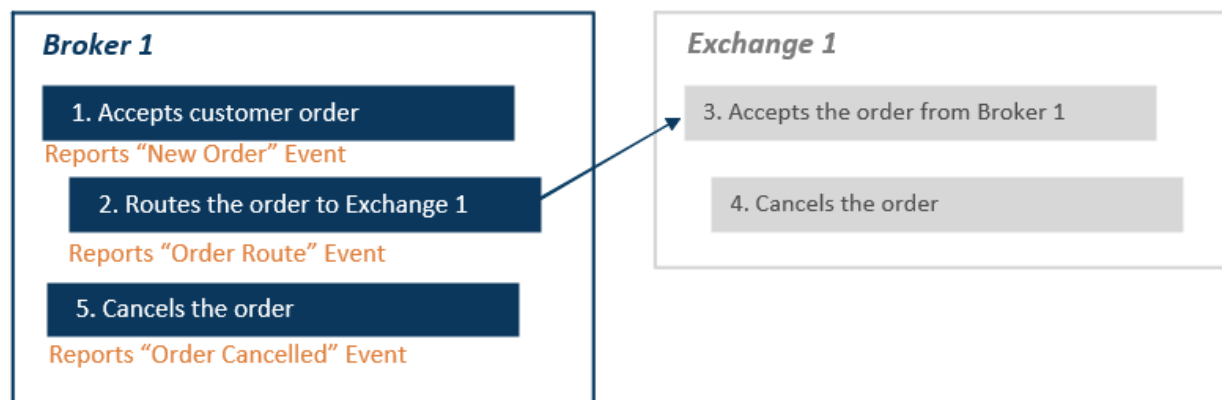

Note that there is a distinction from implicit cancels, such as IOC orders or DFD messages. In these cases, Industry Members would not have to report a cancellation because it's implied by the circumstances.

Since the cancellation was initiated by the exchange, Broker 1 is not required to report a Route Cancelled event. Broker 1 is required to report any action that it takes on the order as a result of the unsolicited cancellation, including a cancellation of the order on its own books and records, as outlined in Option 1.

If the order remains open on Broker 1's books and records after receipt of the unsolicited cancellation, Broker 1 must report any subsequent action on the order, such as a modification or a route to another venue, as outlined in Option 2.

Option 1:

Upon cancellation by the exchange, Broker 1 cancels the order on its books and records.

Industry Member Broker 1 is required to report:

- The origination of the proprietary order (New Order event)
- The route of the order to the exchange (Order Route event)
- The cancellation of the order (Order Cancelled event)

Industry Members are required to capture the *eventTimestamp* in Order Cancelled events reflecting the time the order was cancelled (e.g., the time that the order was confirmed to be cancelled in the firm's OMS/EMS). In this example, the *eventTimestamp* reflects the time that Broker 1 cancelled the order on its books and records after receiving the exchange cancellation. Broker 1 is not required to report a receipt time, as the order was not a customer order, and no request was received.

Option 2:

Upon cancellation by the exchange, Broker 1 modifies the order on its books and records and routes the order to another venue.

Industry Member Broker 1 is required to report:

- The origination of the proprietary order (New Order event)
- The route of the order to Exchange 1 (Order Route event)
- The modification of the proprietary order (Order Modified event)
- The route of the order to Exchange 2 (Order Route event)

Industry Members are required to capture the *eventTimestamp* in Order Modified events reflecting the time the order was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). In this example, the *eventTimestamp* reflects the time that Broker 1 modified the order on its

books and records after receiving the exchange cancellation. Broker 1 is not be required to report a receipt time, as the order was not a customer order, and no request was received.

2.12.2. Industry Member Cancels a Proprietary Order that has Already Been Executed

This scenario illustrates the CAT reporting requirements when an Industry Member attempts to cancel a proprietary order that has already been executed. In this scenario, Industry Member Broker 1 generates a proprietary order and routes the order to Broker 2 for execution. Broker 1 subsequently requests to cancel the order, but the order was fully executed several milliseconds before the cancellation was requested by Broker 1.

Industry Member Broker 1 is required to report:

- The origination of the proprietary order (New Order event)
- The route of the order to Broker 2 (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The execution of Broker 1's order (Trade event)

In accordance with [CAT FAQ B42](#), Broker 2 is not required to report an Order Cancel Request event in Phase 2d, since the request was received after the order was fully executed. However, this activity may be required in future phases of CAT. If Broker 2 chose to optionally report an Order Cancel Request event, it will not be rejected by CAT in accordance with [CAT FAQ P14](#).

2.13. Clearing Firm Scenarios

This section illustrates the CAT reporting requirements for orders handled in a Clearing Firm's system.

2.13.1. Order Routed and Executed via a Clearing Firm

This example illustrates the CAT reporting requirements when an introducing firm enters a customer order into a clearing firm's system, and the clearing firm executes the order from a proprietary account. Both the introducing firm and clearing firm are Industry Members.

Introducing Firm Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to the clearing firm (Order Route event)

The Clearing Firm is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The execution of the order (Trade event)

#	Step	Reported Event	Comments

The <i>sellDetails</i> capture the FDID of the firm proprietary account from which the customer order was filled.

2.13.2. Direct Order Routing via a Clearing Firm's System

This scenario illustrates the CAT reporting requirement when an introducing firm receives a customer order and, using its clearing firm's system, directs the order to an exchange for execution. The clearing firm does not participate in any order routing or handling instructions, but only provides the technology to the introducing firm to route the order.

Introducing Firm Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to Exchange 1 (Order Route event)

The clearing firm does not have CAT reporting obligations in this scenario. The exchange follows CAT reporting guidelines as outlined in the [CAT Reporting Technical Specifications for Plan Participants](#).

#	Step	Reported Event	Comments
1	Customer sends an order to Broker 1	NA	
2	Broker 1 accepts the order from the customer	<p><i>Broker 1 reports a New Order event</i></p> <p>type: MENO orderKeyDate: 20180417T000000 orderID: O23456 symbol: XYZ eventTimestamp: 20180417T153035.234456 manualFlag: false deptType: A side: B price: 10.00 quantity: 1000 orderType: LMT timeInForce: DAY=20180417 tradingSession: REG custDsplntrFlag: false firmDesignatedID: 4e3f2g1h accountHolderType: A affiliateFlag: false negotiatedTradeFlag: false representativeInd: N</p>

2.13.3. Order Routing via an Algorithm Provided by the Clearing Firm

This scenario illustrates the CAT reporting requirements when an introducing firm receives a customer order and enters it into a clearing firm's system. The clearing firm's system automatically determines the routing destination based on pre-defined criteria developed by the clearing firm. The clearing firm makes the determination as to where the order is routed. The introducing firm does not direct the order. Both the introducing firm and the clearing firm are Industry Members.

Introducing Firm Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to the clearing firm (Order Route event)

The Clearing Firm is required to report:

- The receipt for the order from the introducing firm (Order Accepted event)
- The route of the order to Exchange 1 (Order Route event)

The exchange follows CAT reporting guidelines as outlined in the [CAT Reporting Technical Specifications for Plan Participants](#).

2.14. Fractional Share Scenarios

This section illustrates the CAT reporting requirements for liquidating a fractional share from a customer or client account. These scenarios can be applied to full liquidation of a position that includes fractional shares, an ACAT request or dividend reinvestment after liquidation.

2.14.1. Industry Member Liquidates Customer Position by Routing Away the Whole Share Quantity and Internalizing the Fractional Share

This scenario illustrates the CAT reporting requirements when a customer or client requests that an Industry Member liquidate an entire position which includes a fractional share. The Industry Member routes the whole share portion of the order to an exchange for execution and executes the fractional share against its own proprietary account.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the whole share quantity to the exchange (Order Route event)
- The execution of the fractional share against its proprietary account (Trade event)

#	Step	Reported Event	Comments
1	Customer sends an instruction to Broker 1 to liquidate its position	NA	
2	Broker 1 accepts the customer instruction and generates an order to liquidate the position	Broker 1 reports a New Order event type: MENO	Since the customer requested full liquidation of the position, Broker 1 is required to report the full <i>quantity</i> of 100.5 shares.

#	Step	Reported Event	Comments
		orderKeyDate: 20180416T000000 orderID: O12345 symbol: XYZ eventTimestamp: 20180416T153035.234456 manualFlag: false deptType: T side: SL price: quantity: 100.5 orderType: MKT timeInForce: DAY=20180416 tradingSession: REG custDsplntrFlag: false firmDesignatedID: CUST1234 accountHolderType: I affiliateFlag: false negotiatedTradeFlag: false representativeInd: N

The <i>sellDetails</i> reflect the details of customer order O12345.

2.14.2. Introducing Firm Routes the Position to the Clearing Firm

This scenario illustrates the CAT reporting requirements when a customer or client requests that an Industry Member introducing firm liquidate an entire position which includes a fractional share. The introducing firm routes the entire position to the clearing firm and the clearing firm routes the whole share portion to another Industry Member and executes the fractional share against its own proprietary account.

Introducing Firm Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to the clearing firm (Order Route event)

Clearing Firm Broker 2 is required to report:

- The receipt of the order from Introducing Firm Broker 1 (Order Accepted event)
- The route of the whole share quantity to Broker 3 (Order Route event)
- The execution of the fractional share quantity (Trade event)

Broker 3 is required to report:

- The receipt of the whole share order from the Clearing Firm Broker 2 (Order Accepted event)
- The execution of the whole share order (Trade event)

#	Step	Reported Event	Comments
1	Customer sends an instruction to introducing firm Broker 1 to liquidate its position	NA	
2	Introducing firm Broker 1 accepts the customer instruction and generates an order to liquidate the position	Introducing firm Broker 1 reports a New Order event type: MENO orderKeyDate: 20180416T000000 orderID: O12345 symbol: XYZ eventTimestamp: 20180416T153035.234456 manualFlag: false deptType: A side: SL price: quantity: 100.5	Since the customer requested full liquidation of the position, Broker 1 is required to report the full <i>quantity</i> of 100.5 shares.

2.14.3. Introducing Firm Routes the Whole Share Quantity to Another Industry Member and Routes the Fractional Share to the Clearing Firm

This scenario illustrates the CAT reporting requirements when a customer or client requests that an Industry Member introducing firm liquidate an entire position which includes a fractional share. The customer order is entered into the clearing firm's system but the clearing firm does not participate in any order routing or handling instructions for the whole share portion of the order. The introducing firm routes the whole share portion of the order to another Industry Member and the fractional share portion to the Industry Member clearing firm.

Introducing Firm Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the whole share quantity to Broker 2 (Order Route event)
- The route of the fractional share quantity to Clearing Firm Broker 3 (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the whole share order from Introducing Firm Broker 1 (Order Accepted event)
- The execution of the whole share order (Trade event)

Clearing Firm Broker 3 is required to report:

- The receipt of the fractional share order from Broker 1 (Order Accepted event)
- The execution of the fractional share order (Trade event)

2.14.4. Clearing Firm Liquidates a Fractional Share after an ACAT or Account Closure Request

This scenario illustrates the CAT reporting requirements when an Industry Member clearing firm liquidates a fractional share that remained in a customer's account after processing an ACAT request. This scenario would similarly apply if an Industry Member clearing firm liquidates a fractional share received in a customer or client account due to an automatic reinvestment plan after the account was closed. The Industry Member clearing firm's system automatically creates an order based on receipt of the ACAT request and executes the fractional share against its own proprietary account.

Clearing Firm Broker 1 is required to report:

- The creation of the fractional share order (New Order event)
- The execution of the fractional share against its proprietary account (Trade event)

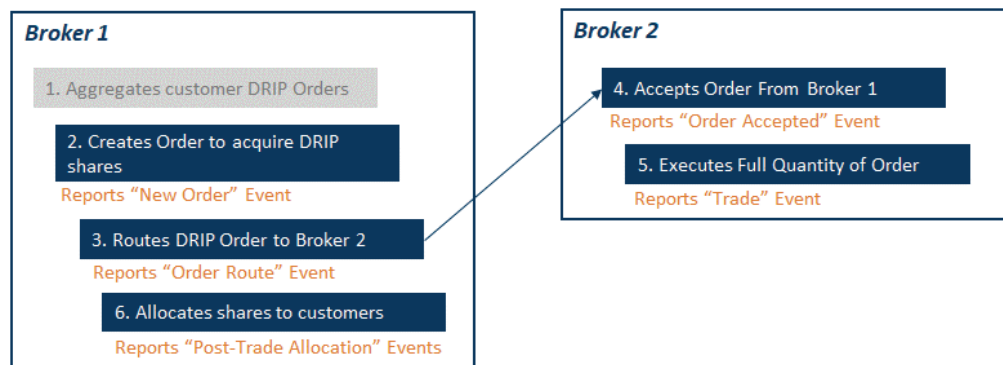

#	Step	Reported Event	Comments
1	Broker 1's system creates an order to internalize the fractional share at the previous trading day's closing price of 25.00 per share	Broker 1 reports a New Order event type: MENO orderKeyDate: 20180416T000000 orderID: O12345 symbol: XYZ eventTimestamp: 20180416T080000.000456 manualFlag: false deptType: T	The <i>eventTimestamp</i> is the time that the Industry Member's system created the order.

The <i>sellDetails</i> reflect the details of customer order O12345.

2.14.5. Dividend Reinvestment

The following scenario illustrates the reporting requirements for an Industry Member whose customers participate in a dividend reinvestment program. Industry Member Broker 1 aggregates dividend reinvestment investment program (DRIP) orders for participating customers, rounds up to the next whole share, and creates a new order to purchase shares that need to be allocated to customers. This order is

routed to the street, executed, and allocated to the participating customers. The remaining fractional share is allocated to the proprietary account of Broker 1.

Industry Member Broker 1 is required to report:

- The order created to acquire shares for all customers participating in the dividend reinvestment program (New Order event)
- The route of the order to Broker 2 (Order Route event)
- The allocation of shares to the participating customers (Post-Trade Allocation events)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The execution of the order (Trade event)

The allocation of shares to Broker 1's original customers is reportable by the firm performing the allocation, which is generally the clearing or self-clearing firm processing the allocation. In this scenario, Broker 1 is a self-clearing firm and has the obligation to report the allocation events to CAT.

Once the fractional inventory reaches a whole share threshold, Broker 1 would follow standard procedures for sales from proprietary accounts if actions were taken to flatten fractional share inventory.

Industry Member Broker 1 is required to report:

- The whole share order (New Order event)
- The route of the order to Broker 3 (Order Route event)

Industry Member Broker 3 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)

- The execution of the order (Trade event)

#	Step	Reported Event	Comments
1	Broker 1 aggregates the orders for DRIP participant customers into a single order	NA

2.15. Stop and Conditional Order Scenarios

2.15.1. Stop Order

This scenario illustrates the CAT reporting requirements when a customer places a stop order, also referred to as a stop-loss order, with an Industry Member.

The customer places a GTC sell order and provides instructions to Industry Member Broker 1 specifying that, should the share price of XYZ fall below a predetermined level of \$35.00 (i.e., the stop price), the order should become immediately executable as a market order. Broker 1 then routes the order to

Industry Member Broker 2. Broker 2 is holding the order at the time the stop price is reached and the condition is triggered and routes the order to an exchange for execution.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event with applicable *handlingInstructions*)
- The route of the customer order to Broker 2 (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event with applicable *handlingInstructions*)
- The time at which the stop price is hit and the underlying condition of the order becomes effective (Order Effective event)
- The route of the customer order to the exchange (Order Route event)

If the order is received/originated or routed as a Stop order, the *orderType* field must be populated with a value of 'MKT'. If the order is received/originated or routed as a Stop Limit order, the *orderType* must be populated with a value of 'LMT', and the *price* field must be populated. Refer to [CAT FAQ B57](#) for additional information.

2.15.2. Stop on Quote Order

This scenario illustrates the CAT reporting requirements when a customer places an order with an Industry Member and communicates instructions that a market order be triggered by a quotation at the stop price. The customer places a GTC sell order and provides instructions to Industry Member Broker 1 specifying that, should a quotation in XYZ appear at \$35.00 (i.e., the stop price), the order should become immediately executable as a market order. Broker 1 holds the order until the condition is triggered (i.e., a quotation at the stop price), at which point Broker 1 routes the order to an exchange for execution.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event with applicable *handlingInstructions*)
- The time at which the stop price is hit and the underlying condition of the order becomes effective (Order Effective event)
- The route of the customer order to the exchange (Order Route event)

If the order is received/originated or routed as a Stop on Quote order, the *orderType* field must be populated with a value of 'MKT'. If the order is received/originated or routed as a Stop Limit on Quote order, the *orderType* must be populated with a value of 'LMT', and the *price* field must be populated.

Refer to [CAT FAQ B57](#) for additional information.

2.15.3. Trailing Stop Order

This scenario illustrates the CAT reporting requirements when a customer places a trailing stop order with Industry Member Broker 1, who routes the order to Broker 2 for further handling and execution. For the purposes of CAT reporting, a trailing stop order is defined as outlined in [FAQ B62](#).

In this scenario, a customer of Broker 1 places a GTC trailing stop sell order at 90% of the prevailing market price. Broker 1 routes the order to Broker 2. Broker 1 relies on Broker 2 to calculate the initial Trailing Stop price, which it determines upon receipt (i.e., initially, \$18.00). Broker 2 continuously re-calculates the trailing stop price as appropriate, and the order is retained by Industry Member Broker 2 until the trailing stop price is triggered.

The price of XYZ advances to a high of \$30.00 per share, and the highest calculated trailing stop price is \$27.00 (i.e., market price of \$30.00 X 90%). The market price for XYZ subsequently declines and hits or goes through the highest calculated trailing stop price (i.e. \$27.00), which triggers a market order to sell the 1,000 shares of XYZ. Once the limit order is triggered, Broker 2 routes the order to an exchange for execution.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event with applicable *handlingInstructions*)
- The route of the customer order to Broker 2 (Order Route event with applicable *handlingInstructions*)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event with applicable *handlingInstructions*)
- The time at which the stop price is hit and the underlying condition of the order becomes effective (Order Effective event)

- The route of the customer order to the exchange (Order Route event)

If the order is received/originated or routed as a Trailing Stop order, the *orderType* field must be populated with a value of 'MKT'. If the order is received/originated or routed as a Trailing Stop Limit order, the *orderType* must be populated with a value of 'LMT', and the *price* field must be populated. While the scenario presented below is a Market Order, in Trailing Stop Limit orders the Limit price denoted in the *price* field and *triggerPrice* field may differ. Refer to [CAT FAQ B57](#) for additional information.

2.15.4. Stop Stock Order

In this scenario, an institutional customer places an order with Industry Member Broker 1, and the parties agree that the entire order will be executed at stop stock price or better. Broker 1 later executes the trade in an off-exchange transaction, filling the customer order from existing inventory held in a proprietary account at the stop stock price.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event with applicable *handlingInstructions*)
- The execution of the customer order against its proprietary account (Trade event)

#	Step	Reported Event	Comments

The <i>sellDetails</i> capture the FDID of the firm proprietary account from which the customer order was filled.

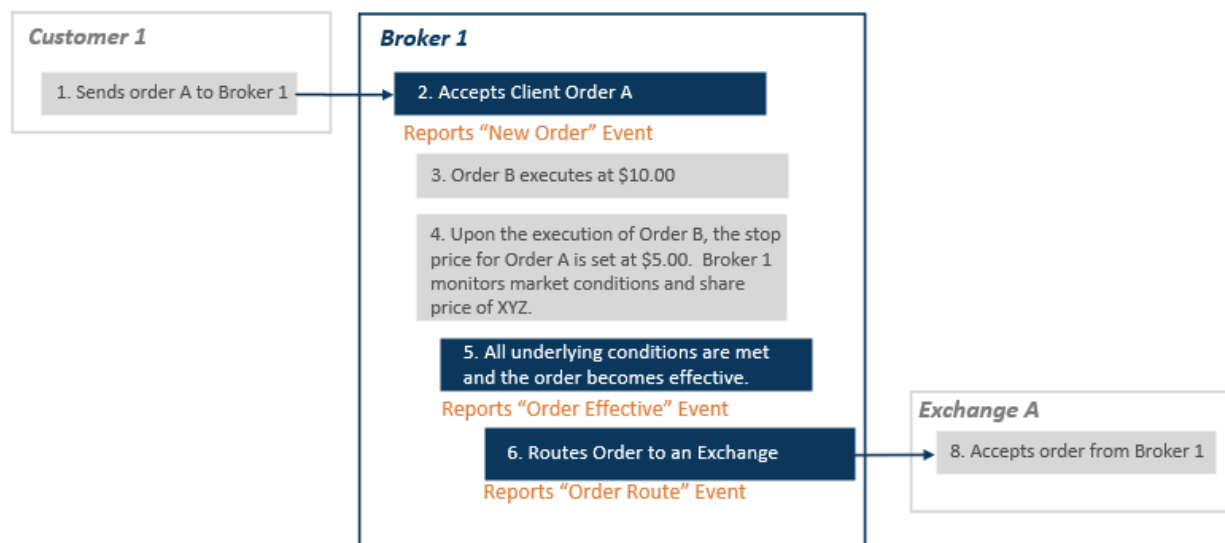

2.15.5. Stop Price is Based on Underlying Condition

This scenario illustrates the CAT reporting requirements when a customer places a conditional order that has multiple underlying conditions.

In this example, the customer places a conditional stop order to sell 100 shares of security XYZ (Order A) with Industry Member Broker 1. The customer provides instructions specifying that the stop price for Order A be determined upon the execution of a separate order in security ABC (Order B).

This scenario addresses the CAT Reporting requirements for Order A. Unlike other stop scenarios (Such as Scenario 2.15.1) where the stop price was known at the time of order receipt, the stop price for Order A is unknown because it is based on an underlying condition (e.g., the execution of Order B). Upon receipt of Order A, Broker 1 reports a New Order event with *handlingInstructions* of 'CND' (Conditional Order) and 'STOPF' (Stop Formula). The 'STOPF' *handlingInstructions* value denotes that the stop price

of the order is not known at the time of order receipt, as it is based on a formula. Broker 1 is holding the order at the time all underlying conditions of the order are met (execution of Order B and the stop being triggered), at which point Broker 1 routes the order to an exchange for execution.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event with applicable *handlingInstructions*)
- All conditions are met, and the order becomes effective (Order Effective event)
- The route of the customer order to the exchange (Order Route event)

If the order is received/originated or routed as a Stop order, the *orderType* field must be populated with a value of 'MKT'. If the order is received/originated or routed as a Stop Limit order, the *orderType* must be populated with a value of 'LMT', and the *price* field must be populated. Refer to [CAT FAQs B57](#) for additional information.

Since Broker 1 is holding the order at the time that all underlying conditions are met such that the order becomes and remains effective, Broker 1 will be required to report an Order Effective event to CAT. Refer to CAT [FAQ B67](#) for additional information.

#	Step	Reported Event	Comments

7	The Exchange accepts the order from Broker 1	EXCH1 reports a Participant <i>Order Accepted</i> event	

2.15.6. Order Contingent on Spread Condition

This scenario illustrates the CAT reporting requirements when a customer places an order with a spread condition such that order becomes activated or inactivated multiple times throughout the day.

In this example, the customer places an order to sell 500 shares of security XYZ with Industry Member Broker 1. The customer provides instructions specifying that the order be acted upon only when the market price of security XYZ is within a \$10.00 spread from the market price of security ABC. When these spread conditions are met (e.g., the market price of security XYZ is within a \$10.00 spread from the market price of security ABC), Broker 1 routes the order to Industry Member Broker 2. When these spread conditions are no longer active (e.g., the market price of security XYZ exceeds a \$10.00 spread from the market price of security ABC), Broker 1 cancels route to Broker 2. Later that day, the market price of security XYZ returns to being within a \$10.00 spread from the market price of security ABC, at which point Broker 1 routes the order to Industry Member Broker 3 where the order is executed.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The initial route of the customer order to Broker 2 when the spread conditions are initially met (Order Route event)
- The cancellation of the route to Broker 2 (Route Cancelled event)
- The route of the customer order to Broker 3 when the spread conditions are subsequently met (Order Route event)

Industry Member Broker 2 is required to report:

- The initial receipt of the order from Broker 1 (Order Accepted event)
- The cancellation of the order received from Broker 1 (Order Cancelled event)

Industry Member Broker 3 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The execution of Broker 1's order (Trade event)

Although Broker 1 cancelled the route that was sent to Broker 2, the customer order remained open in Broker 1's books and records. Therefore, Broker 1 is required to report the cancellation of the route that was sent to Broker 2. This guidance would also apply if Broker 1 routed the order to an exchange as opposed to another broker-dealer. Since the order in Broker 2's books and records is fully cancelled, Broker 2 is required to report the cancellation of the order they received from Broker 1 to CAT.

2.16. RFQ and Solicitation Response Scenarios

This section illustrates the CAT reporting requirements for responses to RFQs (Request for Quote) and other forms of solicitation. Refer to [Section 3.7](#) for Options RFQ and Solicitation Response scenarios.

2.16.1. Response to RFQ is Sent Electronically and is Executed by the Solicitor

This scenario illustrates the CAT reporting requirements when an Industry Member issues an RFQ through an RFQ platform. In this scenario, multiple Industry Members respond to the RFQ by sending FIX messages directly to the requesting Industry Member that are immediately actionable. Upon selection of a response (either by the trader or automatically by the IM's trading system), the Solicitor executes the order for the selected response against the customer order without any further action required by the winning bidder.

Each Responder is required to report the following:

- The origination of the RFQ Response (New Order event with the *solicitationFlag* set to 'true' and the *RFQID* populated)
- The route of the RFQ Response to The Solicitor (Order Route event)

The Solicitor is required to report the following:

- The receipt of a customer order (New Order event)
- The receipt of each RFQ response (Order Accepted event with *solicitationFlag* set to 'true')
- The execution of the customer order against the selected response (Trade event)

While Industry Members are not required to report RFQs or other forms of solicitation to CAT, Industry Members are required to report responses to RFQs and other forms of solicitation as described in [CAT FAQ B45](#). Responses communicated in standard electronic format (e.g. FIX) that are immediately actionable are reportable by both the Industry Member issuing the RFQ or solicitation ("the Solicitor") and

the Industry Member responding to the RFQ or solicitation ("the Responder"), including responses that were not ultimately selected.

2.16.2. Response to RFQ is Sent Through an RFQ Platform, and the Solicitor Routes the Customer Order to the Winning Bidder

This scenario illustrates the CAT reporting requirements when an Industry Member issues an RFQ and receives multiple responses through an RFQ platform that is not part of the Industry Member's OMS/EMS are not immediately actionable. Upon selection of a response, the Industry Member routes the customer order to the winner.

The Solicitor is required to report the following:

- The receipt of a customer order (New Order event)
- The route of the customer order to the winning Responder (Order Route events)

The selected Responder is required to report the following:

- The receipt of the order from the Solicitor (Order Accepted event)
- Execution of the customer order from a prop account (Trade event)

Responses to RFQs issued on an RFQ platform are reportable to CAT if the response is communicated to the Industry Member in standard electronic format (e.g. FIX), and the response is immediately actionable. However, responses to RFQs or other forms of solicitation that are communicated in standard electronic format or are not immediately actionable are not required to be reported to CAT in Phase 2d. However, this activity is expected to be required beginning in July 2023.

In this scenario, further action is required upon selection of a winning response before the order can be executed. Therefore, the RFQ responses are not reportable to CAT in Phase 2d.

All orders received or originated as the result of such RFQ or solicitation process must be reported and must be identified as being part of an RFQ or solicitation process subject to the phasing requirements as set forth in the CAT Reporting Technical Specifications for Industry Members. The *solicitationFlag* is not required to be populated as 'true' on events originated after selection of the winning bid. Refer to [CAT FAQ B45](#) for additional information.

2.16.3. Response to RFQ is Sent Electronically and Further Action is Required

This scenario illustrates the CAT reporting requirements when an Industry Member issues an RFQ through an RFQ platform. In response to the RFQ, multiple Industry Members respond by sending FIX messages directly to the requesting Industry Member's OMS that are not immediately actionable. Although the RFQ responses were sent via standard electronic format directly to the Industry Member's OMS/EMS, the Industry Members sending the responses are required to take additional action by sending a separate order to the requestor before any execution can occur, and would therefore not be considered immediately actionable.

The selected Responder is required to report the following:

- The origination of a New Order for the selected response (New Order event)
- The route of the order to the Solicitor (Order Route event)

The Solicitor is required to report the following:

- The receipt of a customer order (New Order event)
- The receipt of the order from the winning Responder (Order Accepted event)
- The execution of the customer order against the selected response (Trade event)

Although the RFQ responses were sent via standard electronic format directly to the Industry Member's OMS/EMS, the responses are not reportable in Phase 2d because the Industry Members sending the responses would be required to take additional action.

All orders received or originated as the result of such RFQ or solicitation process must be reported and must be identified as being part of an RFQ or solicitation process subject to the phasing requirements as set forth in the CAT Reporting Technical Specifications for Industry Members. The *solicitationFlag* is not

required to be populated as 'true' on events originated after selection of the winning bid. Refer to [CAT FAQ B45](#) for additional information.

2.16.4. Non-CAT Reporting Firm Issues an RFQ and Sends an Order to the Winning Bidder Who is a CAT Reporting Industry Member

This scenario illustrates the CAT reporting requirements when a non-CAT Reporting Asset Manager issues and receives several quotes in response through an RFQ platform that are not immediately actionable. Upon selection of a response from a CAT Reporting Industry Member, the Asset Manager is required to take further action in order to route an order to the winning bidder.

The selected Responder is required to report the following:

- The receipt of a New Order from the Soliciting Asset manager (New Order event)
- The execution of the order (Trade event)

Responses to RFQs issued on an RFQ platform are reportable to CAT if the response is communicated to the Industry Member in standard electronic format (e.g. FIX) and if the response is immediately actionable. However, responses to RFQs or other forms of solicitation that are not immediately actionable

are not considered electronic for CAT Reporting purposes and are not required to be reported to CAT in Phase 2d. However, this activity is expected to become reportable in July 2023.

In this scenario, further action is required by the Solicitor to send an order to the Responder. Therefore, the RFQ responses are not reportable to CAT in Phase 2d.

All orders received or originated as the result of such RFQ or solicitation process must be reported and must be identified as being part of an RFQ or solicitation process subject to the phasing requirements as set forth in the CAT Reporting Technical Specifications for Industry Members. The *solicitationFlag* is not required to be populated as 'true' on events originated after selection of the winning bid. Refer to [CAT FAQ B45](#) for additional information.

2.17. Additional Reporting Scenarios

2.17.1. GTC Order Routed to Exchange, Modified by Customer

The following scenario illustrates the CAT reporting requirements when an Industry Member receives a multi-day order from a customer, and routes the order to an exchange as a DAY order.

When the Industry Member receives the order from the customer, the order is reported to CAT as a GTC order. When the Industry Member routes the order to the exchange for execution, the order is routed as a

"DAY" order, and must be reported to CAT as a "DAY" on the Order Route event reported by the Industry Member as well as relevant Participant events as outlined in the [CAT Reporting Technical Specifications for Plan Participants](#). The Industry Member must submit an Order Route event every day that the order is sent to the exchange until the order is executed or cancelled.

On T+1, the customer modifies the GTC order. Broker 1 must report an Order Modified event with the original order date and an Order Route event for the modification on the exchange.

Industry Member Broker 1 is required to report:

- The receipt of the customer GTC order on T (New Order event)
- The route of the order to the exchange on T as a "DAY" order (Order Route event)
- The route of the order to the exchange on T+1 (start of day) as the order was not executed or cancelled on T (Order Route event)
- The receipt of the customer request on T+1 (*requestTimestamp* on Order Modified event)
- The confirmation of the modification on T+1 (during market hours) (*eventTimestamp* on Order Modified event)
- The route of the modification to the exchange on T+1 (Order Route event)

In this scenario, Broker 1 is not required to report a Route Cancelled event for the route that was sent to the Exchange on T, as the route was a "DAY" order that expired at the end of the day.

Industry Members are required to capture the *eventTimestamp* in Order Modified events reflecting the time the order was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). In this example, the *eventTimestamp* reflects the time that acknowledgement was received from the exchange. Industry Members are also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Modified event, or in a separate Order Modification Request event.

2.17.2. Retired Scenario

2.17.3. Retired Scenario

2.17.4. Order Fulfillment Amendment

This scenario illustrates the CAT reporting requirements when an Industry Member amends the price of a customer fill that was reported to CAT earlier that day, then amends the price of the customer fill again the next day. Refer to section 4.13.2 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

For the purpose of this example, details of order handling on the original day are not included.

Industry Member Broker 1 is required to report:

- The fill of the customer order on a Riskless Principal basis on Day T (Order Fulfillment event)
- The amendment of the price of the customer fill on day T (Order Fulfillment Amendment event)
- The amendment of the price of the customer fill on day T+1 (Order Fulfillment Amendment event)

3. Option Scenarios and Examples

This section illustrates reporting scenarios for single leg electronic option events. Each example includes a process flow table and sample reporting values. Refer to Section 5 of the [CAT Reporting Technical Specifications for Industry Members](#), along with [Published Options guidance](#) and [Section K of the CAT FAQs regarding Options](#) for additional information.

3.1. Option Order Origination and Route Scenarios

This section illustrates the CAT reporting requirements when an order is received or originated, and is subsequently routed away from the firm for execution. Refer to Section 5.4 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

3.1.1. New Principal Option Order Routed to Exchange and Executed

This scenario illustrates the CAT reporting requirements when an Industry Member originates a new principal option order electronically, and electronically routes the order to an exchange where it is executed.

Industry Member Broker 1 is required to report:

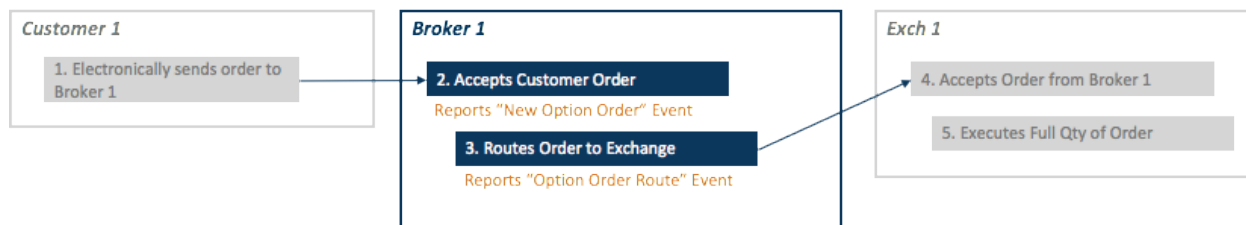

- The origination of a principal option order (New Option Order event)
- The route to an exchange (Option Order Route event)

#	Step	Reported Event	Comments

3.1.3. Customer Option Order Electronically Routed between Two Industry Members and Subsequently Executed on an Exchange

This scenario illustrates the CAT reporting requirements when an option order is electronically routed from one Industry Member to another, and is further routed to an exchange for execution.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Option Order event)
- The route of the customer option order to Broker 2 (Option Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Option Order Accepted event)
- The route of the order to the Exchange (Option Order Route event)

3.1.4. Retired Scenario

3.1.5. Retired Scenario

3.2. Fulfillment Scenarios

3.2.1. Broker Receives Single Leg Electronic Orders, Creates a Combined Order and Routes the Combined Order to an Exchange

This scenario illustrates the reporting requirements when an Industry Member combines individual, simple option orders from customers before routing to an exchange as a single, simple order for execution. Refer to Section 5.11 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

Industry Member Broker 1 is required to report:

- The electronic receipt of each single leg customer order (New Option Order events)
- The generation of the combined order (New Option Order event)
- The route of the combined order to the exchange (Option Order Route event)
- The fill of each customer order (Option Order Fulfillment event)

The New Option Order event representing the combined order must be populated with a *representativeInd* value of 'O' indicating that the order is an Options Combined order. The Option Order Fulfillment events must be populated with a *fulfillmentLinkType* value of 'O' indicating that the order is an Options Order Fulfillment. Explicit linkage between the customer orders and the combined order is required.

3.3. Option Order Modification Scenarios

This section illustrates CAT reporting requirements for single leg option order modification scenarios. In addition to the scenarios provided below, please refer to Equity Event Section 2.4.8. This guidance also applies to single leg electronic option order reporting. Refer to Section 5.8 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

3.3.1. Customer Requests the Modification of an Option Order that was Previously Routed to an Exchange

This scenario illustrates a customer requested modification (electronically) of an option order which the Industry Member had previously routed to an exchange.

Industry Member Broker 1 is required to report:

- The electronic receipt of the customer order (New Option Order event)
- The route of the order to the exchange (Option Order Route event)
- The electronic receipt of the customer modification request (*requestTimestamp* on Option Order Modified event)
- The cancellation of the original route to the exchange (Option Route Cancelled event)
- A new route to the exchange (Option Order Route event)
- The confirmation of the customer modification (*eventTimestamp* on Option Order Modified event)

#	Step	Reported Event	Comments
1	Customer electronically sends the option order to Broker 1	NA

3.4. Cancellation Scenarios

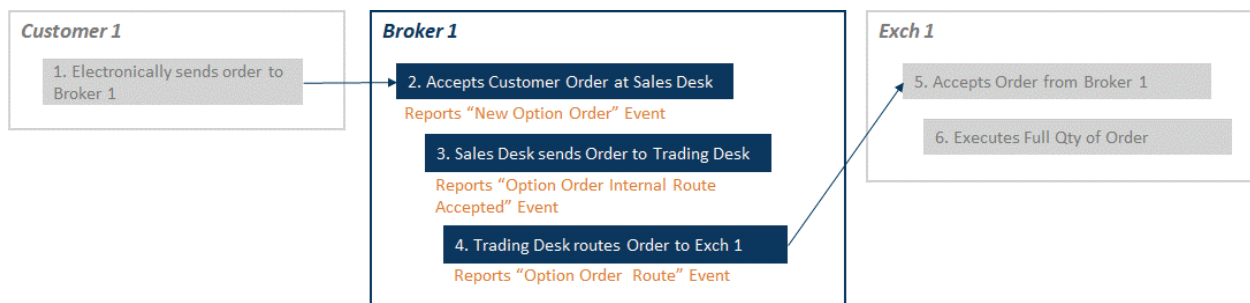

Option Order Cancelled events follow the same guidance as Order Cancelled events for equities. In addition to the scenarios provided below, refer to Equity Event Section 2.6. The guidance also applies to single leg electronic option order reporting. Refer to Section 5.9 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

3.5. Internal Route Scenarios

This section illustrates the CAT reporting requirements when an order is passed to a different department or desk within a *CATReporterIMID*. Refer to Section 5.6 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

3.5.1. Customer Option Order Internally Routed Electronically

This scenario illustrates the CAT reporting requirements when an Industry Member internally routes a customer order from the Sales Desk to the Trading Desk.

Industry Member Broker 1 is required to report:

- The electronic receipt of the customer order (New Option Order event)
- The internal route of the order from the Sales Desk to the Trading Desk (Option Order Internal Route Accepted event)
- The route of the order to the exchange (Option Order Route event)

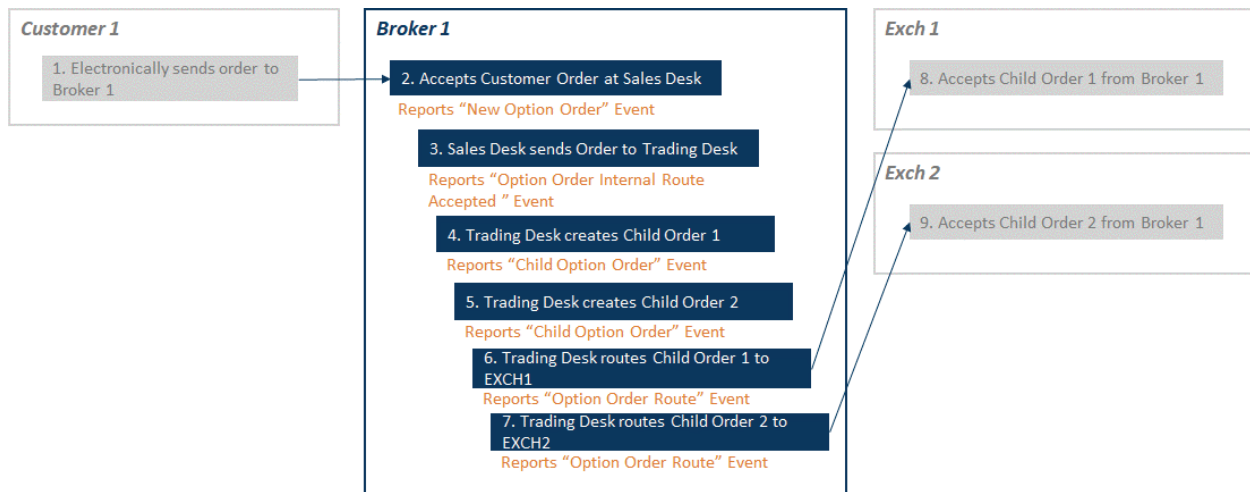

#	Step	Reported Event	Comments

3.5.2. Order is Routed Internally and Child Orders are Generated Prior to Routing

This scenario illustrates the CAT reporting requirements when an Industry Member routes an order internally from the Sales Desk to the Trading Desk, and the Trading Desk generates child orders. The

child orders are then routed to exchanges for execution.

Industry Member Broker 1 is required to report:

- The electronic receipt of the customer order (New Option Order event)
- The internal route of the order from the Sales Desk to the Trading Desk (Option Order Internal Route Accepted event)
- The generation of child orders by the Trading Desk (Child Option Order events)
- The route of each child order to an exchange (Option Order Route events)

3.6. Complex Order Scenarios

This section illustrates the CAT reporting requirements when handling complex orders. Refer to Section 5 of the [CAT Reporting Technical Specifications for Industry Members](#) and [CAT FAQ K2](#) for additional information.

This section will be updated with Phase 2d reporting requirements in a future iteration of this document.

3.6.1. Industry Member Receives and Routes an Exchange Defined Complex Option Order to be Executed on the Exchange

This scenario illustrates CAT reporting requirements when an Industry Member receives a complex multi-leg order from a customer electronically, and then routes the order to an exchange for execution.

Industry Member Broker 1 is required to report:

- The electronic receipt of the customer complex order (New Multi-Leg Order event)
- The route of the complex order to the exchange (Multi-Leg Order Route event)

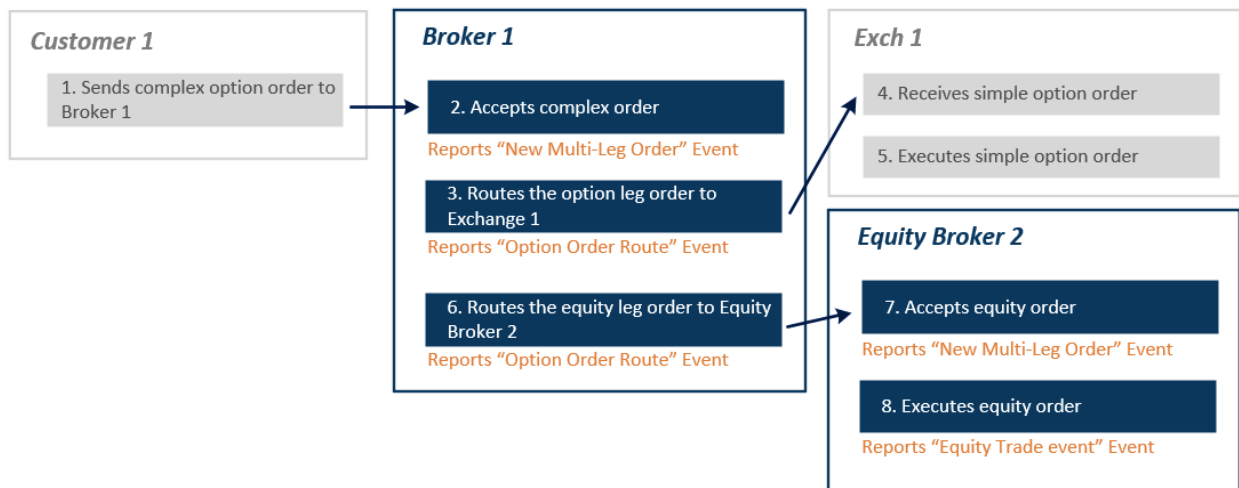

#	Step	Reported Event	Comments

3.6.2. Industry Member Receives a Complex Option Order Which is worked as Individual Single Order Legs in the Customer's Account

This scenario illustrates CAT reporting requirements when an Industry Member receives a complex option order from a customer, but routes the individual leg orders to external execution venues

Industry Member Broker 1 is required to report:

- The receipt of the complex option order from the customer (Multi-Leg New Order event)
- The route of the single leg option order to the exchange (Option Order Route event)
- The route of the equity leg order to Equity Broker 2 (Equity Order Route event)

Industry Member Equity Broker 2 is required to report:

- The receipt of the equity order from Broker 1 (Equity Order Accept event)
- The execution of the order from Broker 1 (Trade event)

3.6.3. Industry Member Receives a Complex Order Manually Followed by Individual FIX Messages for Each Leg

This scenario illustrates CAT reporting requirements when an Industry Member receives a complex/multi-leg order from a customer verbally, then receives individual FIX order messages electronically for each of the leg components. In this scenario, the customer is unable to send multi-leg order messages electronically due to system limitations and can only send individual leg orders electronically via FIX.

The Industry Member is required to report the manual receipt of the complex order using a multi-leg order event. The order is considered received once all the terms of the order are agreed, including all leg details and the net price. This is true whether electronic FIX messages are received prior to or after the complete order instruction from the client.

Industry Member Broker 1 is required to report:

- The receipt of the complex option order from the customer (New Order event)
- The route of the complex option order to the exchange (Order Route events)

Industry Member Broker 1 is NOT required to report:

- The receipt of the individual leg orders received electronically from the customer
- Any trade/fulfillment events on the individual leg orders.

If the Industry Member chooses to report order events for the individual leg messages, the *handlingInstructions* field must be populated with a value of 'CMPX'.

#	Step	Reported Event	Comments

3.6.4. Retired Scenario

3.7. RFQ and Solicitation Response Scenarios

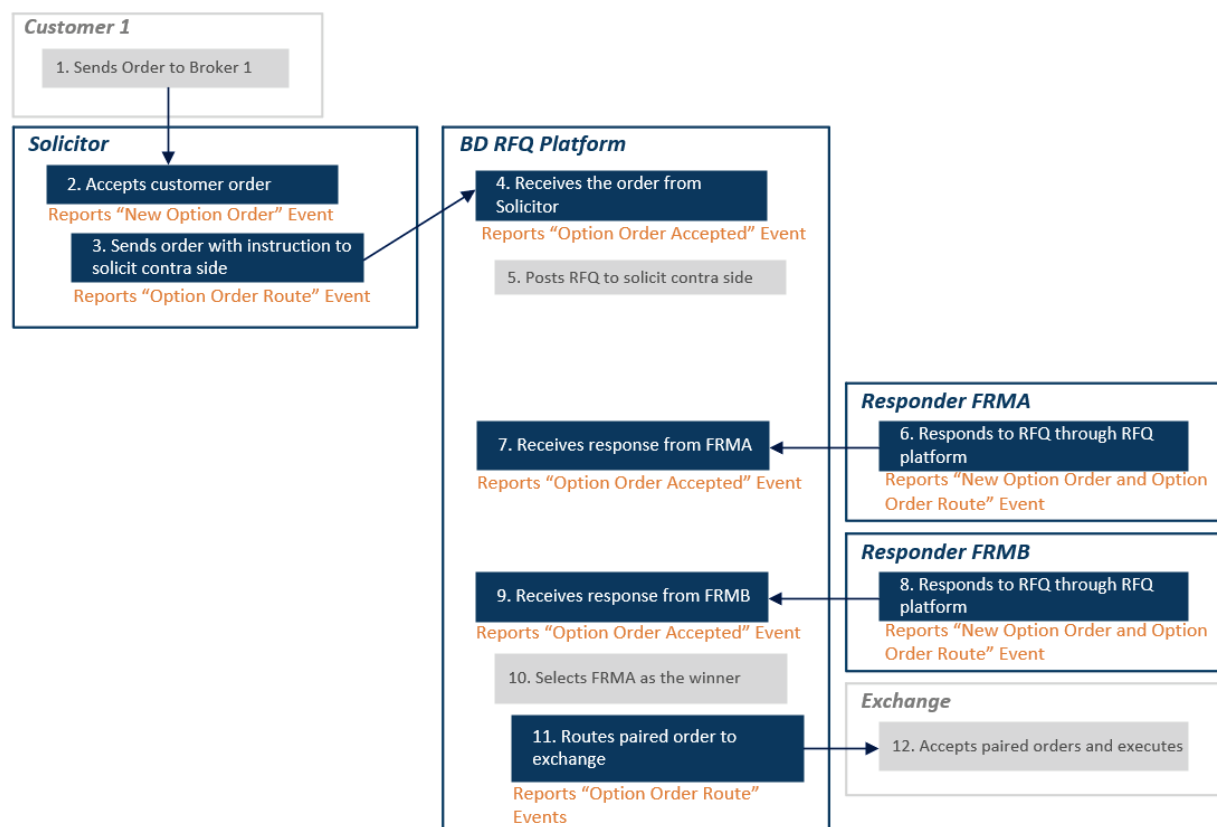

This section illustrates the CAT reporting requirements for responses to RFQs (Request for Quote) and other forms of solicitation. Refer to [Section 2.16](#) for additional RFQ and Solicitation Response scenarios that apply to both Equity and Options order flow.

3.7.1. Retired Scenario

3.7.2. Retired Scenario

3.7.3. Response to RFQ is Sent Through an RFQ Platform operated by a Broker-Dealer

This scenario illustrates the CAT reporting requirements when an Industry Member (Solicitor) receives a customer order and sends the customer order to an Industry Member broker-dealer that operates an RFQ platform (BD RFQ Platform) with instructions to issue an RFQ to solicit the contra side. The broker-dealer operating the RFQ platforms sends out the RFQ and multiple Industry Members (Responders) respond to the RFQ directly through the RFQ platform. The broker-dealer operating the RFQ platform selects the winning response and routes the customer order and the selected response as a paired order to an exchange for execution.

The Solicitor is required to report the following:

- The receipt of a customer order (New Option Order event)
- The route of the customer order to the BD RFQ Platform (Option Order Route event)

Each Responder is required to report the following:

- The origination of a proprietary order (New Option Order event *solicitationFlag* as 'true' and the *RFQID* populated)
- The route of the order to the BD RFQ Platform (Option Order Route event)

The BD RFQ Platform is required to report the following:

- The receipt of the customer order from the Solicitor (Option Order Accepted event)
- The receipt of responses from each Responder, including those that were not selected (Option Order Accepted event with *solicitationFlag* as 'true')
- The route of the customer order from the Solicitor and the order from the winning Responder as a paired to the exchange (Order Route events with the same *pairedOrderID* populated)

All orders received or originated after the selection of a winning bid to facilitate the execution of such bid as the result of such RFQ or solicitation process must be reported and must be identified as being part of an RFQ or solicitation process subject to the phasing requirements as set forth in the CAT Reporting Technical Specifications for Industry Members as outlined in [FAQ B45](#).

3.7.4. Industry Member Receives a Customer Order and is Only Able to Pair a Portion of the Order

This scenario illustrates the CAT reporting requirements when an Industry Member electronically receives a simple option from a customer for 100 contracts and manually solicits Industry Member Broker 2 to pair the order. Broker 2 responds to the solicitation and agrees to take the other side for only 60 contracts. Broker 1 is left with 40 contracts of the customer order.

Industry Member Broker 1 (Solicitor) is required to report:

- The receipt of the customer order (New Option Order event)
- The receipt of the order from Broker 2 (Option Order Accepted event with *solicitationFlag* as 'true')
- The route of the paired order to the exchange (Option Order Route events with the same *pairedOrderID*)
- The route of the un-paired quantity of the single leg order to an exchange (Option Order Route event)

Industry Member Broker 2 (Responder) is required to report:

- The origination of a New Order for the selected response (New Order event with *solicitationFlag* as 'true')
- The route of the order to the Broker 2 (Order Route event)

Responses to RFQs or other forms of solicitation that are communicated manually (e.g. Phone, Instant Message) are not required to be reported to CAT in Phase 2d. However, this activity may be required in future phases of CAT.

All orders received or originated as the result of such RFQ or solicitation process must be reported and must be identified as being part of an RFQ or solicitation process subject to the phasing requirements as set forth in the CAT Reporting Technical Specifications for Industry Members. Refer to [CAT FAQ B45](#) for additional information.

3.7.5. Floor Broker Solicits the Contra Side of a Multi-Leg Order and Routes the Equity Leg as a Pair to the Responder for Execution

This scenario illustrates the CAT reporting requirements when a non-FINRA Member Floor Broker receives a multi-leg order from non-FINRA Member Broker 1, and solicits FINRA Member Broker 3 over the phone to take the other side. Broker 3 responds positively to the solicitation over the phone and routes an order to the floor broker. Since Broker 3 is the only FINRA Member firm involved in the transaction, the floor broker prices the equity legs and routes the equity legs to Broker 3 as a pair for execution. The option legs are routed to an options exchange for execution.

Non-FINRA Member Broker 1 is required to report:

- The origination of the multi-leg order (New Multi-Leg Order event)
- The route of the multi-leg order to the floor broker (Multi-Leg Order Route event)

The non-FINRA Member Floor Broker is required to report:

- The receipt of the multi-leg order (Sell) from Broker 1 (Multi-Leg Order Accepted event)
- The receipt of the multi-leg order (Buy) from Broker 3 (Multi-Leg Order Accepted event)
- The route of the equity legs as a pair to Broker 3 for execution (Order Route events)
- The route of the option legs as a pair to an exchange for execution (Option Order Route events)

FINRA Member Broker 3 is required to report

- For the order originated as a result of solicitation:
 - The origination of the multi-leg order a result of solicitation (New Multi-Leg Order event)
 - The route of the multi-leg order to the floor broker (Multi-Leg Order Route event)

- For the paired equity legs received from the floor broker:
 - The receipt of both equity legs as a pair from the floor broker (Order Accepted events)
 - The execution of the paired equity legs (Trade event)

Both parties are required to report the route/receipt of the multi-leg order from Broker 3 to the floor broker, and the route/receipt of the paired equity legs from the floor broker to Broker 3 for execution.

Industry Members are not required to report RFQs or other forms of solicitation to CAT. Responses to RFQs or other forms of solicitation that are communicated manually (e.g. Phone, Instant Message) are not required to be reported to CAT in Phase 2d. However, this activity is expected to become required in 2023. The *solicitationFlag* is not required to be populated as 'true' on events originated after selection of the winning bid.

3.8. Additional Options Reporting Scenarios

3.8.1. Response to an Exchange Auction

This scenario illustrates the CAT reporting requirements when an Industry Member originates a proprietary option order in response to an Exchange Auction of a simple option or paired order of simple options. Refer to [CAT FAQ K3](#) for additional information.

Industry Member Market Maker 1 is required to report:

- The origination of the proprietary order (New Option Order event)
- The response to the exchange auction (Option Order Route event)

The Industry Member is required to report the auction details in the *handlingInstructions* field using the name/value pair 'AucResp', which must be paired with the AuctionID value.

4. Error Account Scenarios

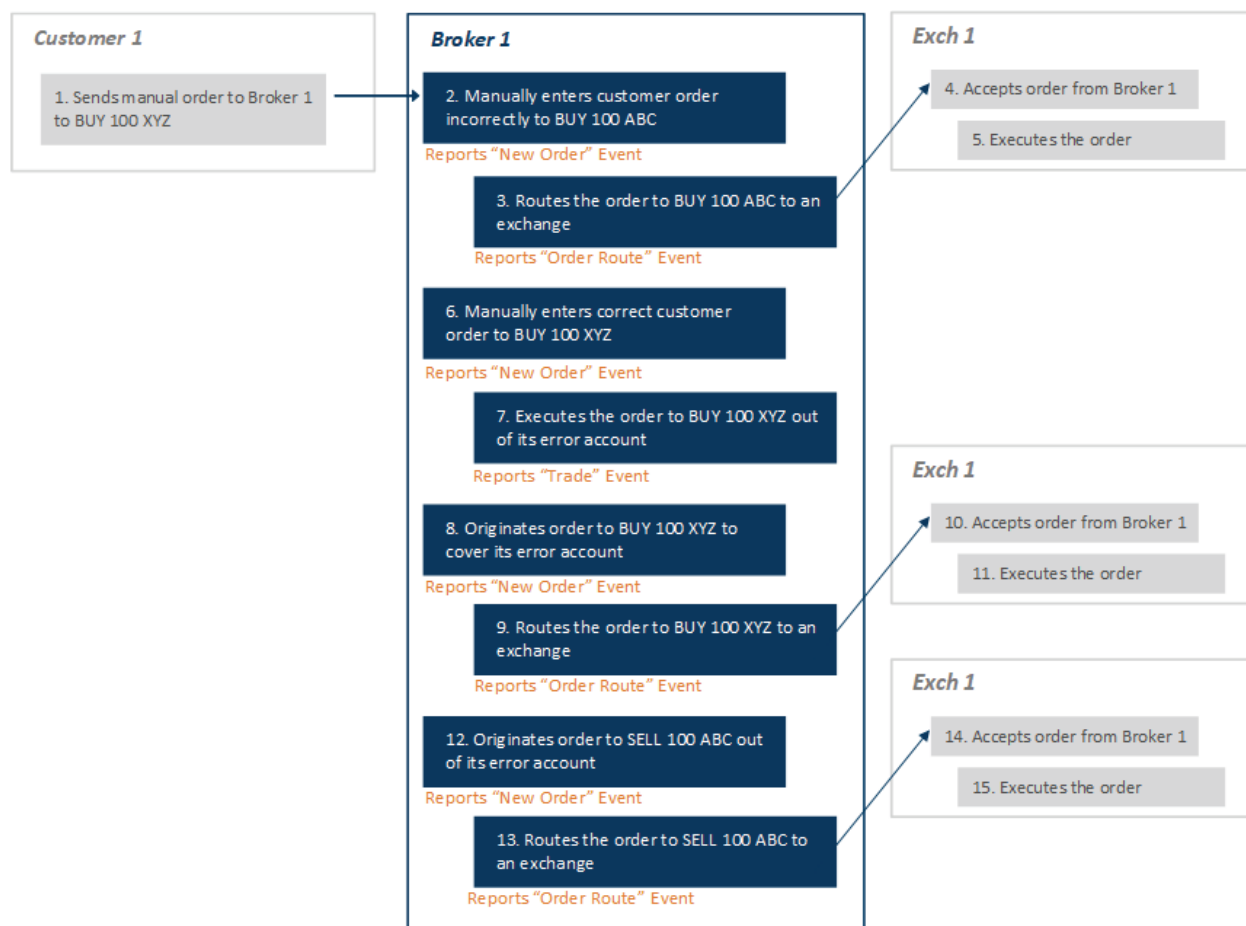

This section illustrates reporting requirements for reporting bona fide errors and activity occurring in an error account. These scenarios are applicable to equivalent equities and options order flows.

4.1.1. Industry Member Purchases the Wrong Security for a Customer/Client in Error

This scenario illustrates the CAT reporting requirements when an Industry Member receives a customer/client order and purchases the wrong security in error. In this scenario, the customer/client places an order to buy 100 shares of XYZ over the phone, and in error, the Industry Member enters an order to buy 100 shares of ABC.

Once the Industry Member realizes the error, it moves 100 shares of ABC from the customer's/client's account to its error account, and executes the customer/client order for 100 shares of XYZ out of its error account at the price the stock was trading when the customer/client originally placed the order.

The Industry Member then purchases 100 shares of XYZ on an exchange for its error account to cover the shares sold to the customer/client, and sells the 100 shares of ABC purchased in error on an exchange from its error account.

When the firm places an order in error for symbol ABC, Industry Member Broker 1 is required to report:

- The entry of the customer/client order to buy the wrong security ABC (New Order event)
- The route of the order to buy ABC to an exchange (Order Route event)

When the firm realizes and corrects the error, Industry Member Broker 1 is required to report:

- The entry of the customer/client order to buy the correct security XYZ (New Order event)
- The fill of the customer/client order for symbol XYZ from the firm's error account (Trade event)
- The origination of an order to buy XYZ to cover the firm's error account (New Order event)
- The route of the buy order for XYZ to an exchange (Order Route event)
- The origination of an order to sell the shares of ABC purchased in error (New Order event)
- The route of the sell order for ABC to an exchange (Order Route event)

The movement of the shares from the customer/client account to the error account is not reportable to CAT, as internal security movements and journal entries are not reportable to CAT.

4.1.2. Customer/Client Places an Order in Error and the Industry Member Elects to Correct the Error as an Accommodation to the Customer/Client

This scenario illustrates the CAT reporting requirements when a customer/client places an order to purchase the wrong security, and the Industry Member elects to correct the error as an accommodation to the customer/client. In this scenario, the customer/client places an order to buy 100 shares of XYZ, which is immediately executed by the Industry Member.

The customer/client then informs the Industry Member that they intended to buy 100 shares of ABC, and the Industry Member agrees to correct the error as an accommodation to the customer/client. The Industry Member executes the customer/client order for 100 shares of ABC from a proprietary account, and takes the 100 shares of XYZ from the customer/client account into its error account. The Industry Member then sells 100 shares of XYZ from its error account on an exchange.

For symbol XYZ, Industry Member Broker 1 is required to report:

- The receipt of the customer/client buy order placed in error (New Order event)
- The execution of the customer/client buy order from a proprietary account (Trade event)

- The origination of an order to sell the shares out of the error account (New Order event)
- The route of the sell order to an exchange (Order Route event)

For symbol ABC, Industry Member Broker 1 is required to report:

- The receipt of the customer/client buy order in the correct security (New Order event)
- The execution of the customer/client buy order from a proprietary account (Trade event)

The movement of the shares from the customer/client account to the error account is not reportable to CAT, as internal security movements and journal entries are not reportable to CAT.

10	Exch 1 executes the order	<i>Exch 1 reports a Participant Trade event</i>	

4.1.3. Price Adjustment Through the Execution of a New Trade

This scenario illustrates the CAT reporting requirements when an Industry Member makes a price adjustment to a customer/client order by executing a new trade with the customer as principal. In this scenario, Industry Member Broker 1 receives a customer/client order to buy 1,000 shares of XYZ, and routes the order to Industry Member Broker 2 for execution at a price of 10.00 per share.

Industry Member Broker 1 determines that the customer/client should have received a price of 9.98 per share, and moves the 1,000 shares of XYZ executed at a price of 10.00 per share from the customer account to its error account. To effect the price adjustment to the customer, Industry Member Broker 1 sells the shares, as Principal, to the customer at 9.98 per share.

Industry Member Broker 1 is required to report:

- The receipt of the customer/client order (New Order event)
- The route of the order to Broker 2 (Order Route event)
- The execution of the order from the firm's error account at a price of 9.98 (Trade event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The execution of the order at a price of 10.00 (Trade event)

The movement of the shares from the customer/client account to the error account is not reportable to CAT, as internal security movements and journal entries are not reportable to CAT.

4.1.4. Industry Member Enters the Incorrect Side on a Customer/Client Order in Error

This scenario illustrates the CAT reporting requirements when an Industry Member receives a customer/client order and enters the incorrect side in error. In this scenario, the customer/client places an order to sell 100 shares of XYZ over the phone, and in error, the Industry Member enters an order to buy 100 shares of XYZ. The order is routed to an exchange for execution.

Once the Industry Member realizes the error, it moves the 100 shares of XYZ purchased in error from the customer's/client's account to its error account, and executes the customer/client order to sell 100 shares of XYZ out of its error account at the price the stock was trading when the customer/client originally placed the order.

The Industry Member then sells 200 shares of XYZ on an exchange for its error account to cover the shares acquired from the customer/client.

When the firm places an order in error to buy symbol XYZ, Industry Member Broker 1 is required to report:

- The entry of the customer/client order to buy the security in error (New Order event)
- The route of the buy order to an exchange (Order Route event)

When the firm realizes and corrects the error, Industry Member Broker 1 is required to report:

- The entry of the correct customer/client order to sell the security (New Order event)
- The fill of the customer/client order to sell XYZ from the firm's error account (Trade event)
- The origination of an order to sell the shares of XYZ acquired from the customer (New Order event)
- The route of the sell order to an exchange (Order Route event)

The movement of the shares from the customer/client account to the error account is not reportable to CAT, as internal security movements and journal entries are not reportable to CAT.

4.1.5. Industry Member Does Not Enter a Customer Order Until T+1

This scenario illustrates the CAT reporting requirements when an Industry Member receives a customer/client order and does not enter the customer order until T+1. In this scenario, the customer/client places an order to buy 100 shares of XYZ over the phone, and in error, the Industry Member enters the order on T+1. The order is routed to an exchange for execution.

Once the Industry Member realizes that the customer is due a price adjustment, it moves the 100 shares of XYZ from the customer's/client's account to its error account, and executes the customer/client order out of its error account at the price the stock was trading when the customer/client originally placed the order.

Industry Member Broker 1 is required to report:

- The receipt of the customer/client order (New Order event)
- The route of the order to the exchange (Order Route event)

- The execution of the order from the firm's error account at a price of 9.98 (Trade event)

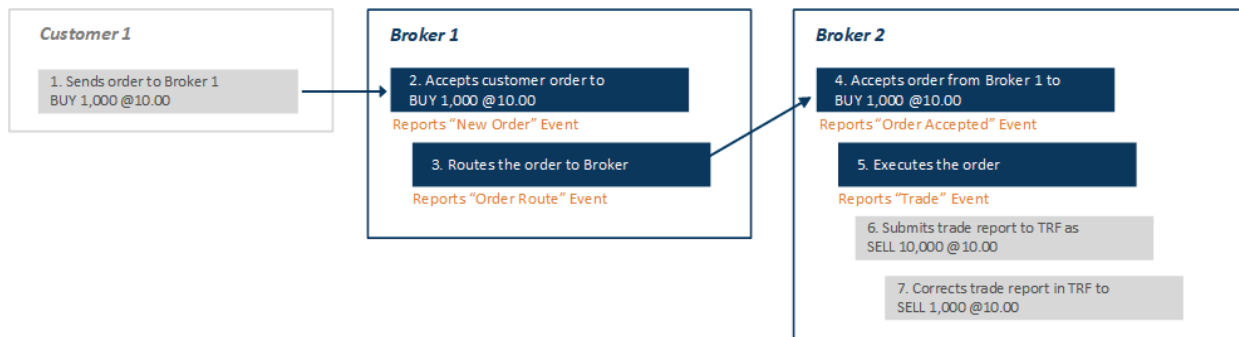

The movement of the shares from the customer/client account to the error account is not reportable to CAT, as internal security movements and journal entries are not reportable to CAT.

The <i>sellDetails</i> reflect the FDID of the firm's error account.

4.1.6. Correction of a Trade Incorrectly Reported to a TRF/ADF/ORF

This scenario illustrates the CAT reporting requirements when an Industry Member makes a correction to a trade that was submitted to a TRF/ADF/ORF. In this scenario, Industry Member Broker 1 receives an order for 1,000 shares of XYZ at a price of 10.00 per share, and routes the order to Broker 2. Broker 2 executes the order at a price of 10.00 per share and reports the trade to the TRF, but incorrectly reports the trade as a sale of 10,000 shares at a price of 10.00. Broker 2 determines that the trade should have been reported with a quantity of 1,000 shares, and corrects the TRF report to reflect the correct shares quantity.

Industry Member Broker 1 is required to report:

- The receipt of an order for 1,000 shares (New Order event)
- The route of the order to Broker 2 (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the order for 1,000 shares from Broker 1 (Order Accepted event)
- The execution of the order for 1,000 shares at a price of 10.00 (Trade event linking to the initially reported TRF report with a shares quantity of 10,000)

In its Trade event, Broker 2 should populate the *tapeTradeID* linking to the initially reported TRF report with an incorrect shares quantity of 10,000. In this scenario, Broker 2 is not required to submit any CAT reports reflecting the correction made in the TRF.

If the CAT Trade event was also submitted with an incorrect quantity of 10,000 shares, Broker 2 would be required to submit a correction to CAT correcting the quantity on the Trade event. Refer to Section 7.6 of the [CAT Reporting Technical Specifications for Industry Members](#) for instructions on submitting corrections to previously accepted CAT Events.

4.1.7. Trade is Cancelled after TRF Rejection due to 'Price out of Range'

This scenario illustrates the CAT reporting requirements when an Industry Member cancels a trade after receiving a TRF Rejection due to 'Price out of Range'. This is an edge case scenario and does not frequently occur.

In this scenario, an Industry Member receives an order to buy 1,000 shares of XYZ and executes the shares from a proprietary account at a price of 12.50. The Industry Member submits a media trade report to the TRF, but the trade report is rejected due to 'Price out of Range'. Instead of repairing the media trade report and resubmitting to the TRF, the Industry Member determines to cancel the trade.

For CAT reporting, the *cancelFlag* and *cancelTimestamp* fields are only required in a Trade event in instances where cancel information is not captured in the TRF. Since the media trade report was not repaired, the cancel information was therefore not captured in the TRF, and the Industry Member is required to populate the *cancelFlag* and *cancelTimestamp* fields in its CAT Trade event reflecting the time the Industry Member cancelled the trade.

This scenario illustrates the requirement that if the Industry Member is unable to populate the *cancelFlag* and *cancelTimestamp* fields in its initial Trade event submission to CAT, and must submit a 'COR' event to capture these fields.

Industry Member Broker 1 is required to report:

- The receipt of the customer/client order (New Order event)
- The execution of the customer/client order (Order Trade event)
- The correction of the Trade event reflecting the addition of the *cancelFlag* and *cancelTimestamp* fields (Trade event with *actionType* 'COR')

Broker 1 may alternatively choose to combine the trade and cancel information into one MEOT event with the *cancelFlag* set to 'true' and the *cancelTimestamp* field populated if it is able to do so.

5. FDID Scenarios

This section illustrates reporting requirements when populating the *firmDesignatedID* field (“FDID”). These scenarios are applicable to equivalent equities and options order flows. Refer to Section 2.4.2 of the [CAT Reporting Technical Specifications for Industry Members](#), along with [Published FDID guidance](#) and [Section M of the CAT FAQs regarding FDIDs](#) for additional information.

5.1.1. An Order is Received from a New Customer/Client and an Account Number is not Finalized Until a Later Date

This scenario illustrates the CAT reporting requirements when an Industry Member receives an order from a new customer/client for which an account number is not yet established, and does not become finalized until a later date.

In this scenario, the Industry Member must report the receipt of the customer/client order on T, and the FDID must be populated with a value of “PENDING”, indicating that an account number for this customer/client is not yet established. Once the account number is established on T+1, the Industry Member must report a New Order Supplement event with the FDID of the newly established account.

Industry Member Broker 1 is required to report:

- The receipt of the customer/client order, indicating that an account number is not yet established (New Order event)
- The route of the customer/client order to the exchange (Order Route event)
- The FDID of the customer/client account after the account number has been finalized (New Order Supplement event)

In this scenario, the customer is an individual retail customer, which is reflected with an *accountHolderType* value of “I”. However, the reporting requirements in this scenario are not limited to retail customers.

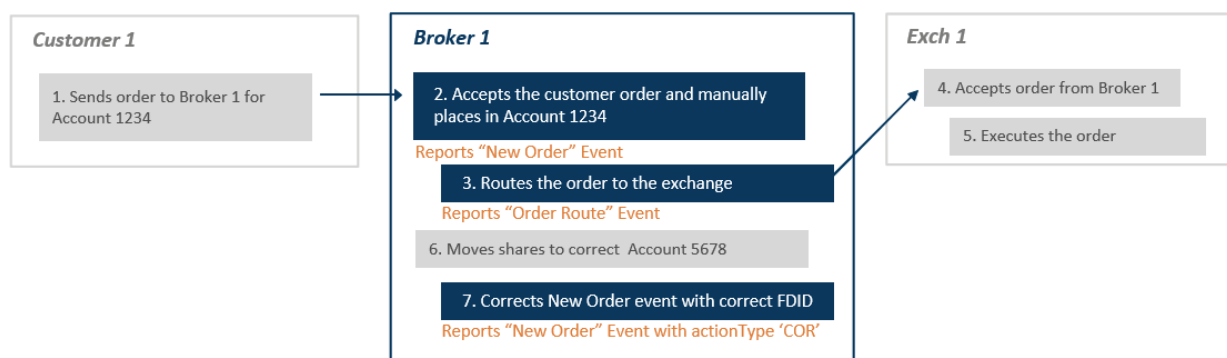

If an Industry Member is unable to submit a New Order Supplement event once the FDID becomes available, the Industry Member may report this activity by submitting a “COR” event reflecting the update in FDID. However, CAT will be unable to distinguish that the COR record is an update of a “PENDING” FDID value, and will categorize the event as a firm initiated error correction.

4	The Exchange accepts the order from Broker 1	EXCH1 reports a Participant Order Accepted event	
5	The Exchange executes the order	EXCH1 reports a Participant Trade event	
6	On T+1, Broker 1 finalizes the account number and reports the FDID to CAT	Broker 1 reports a New Order Supplement event type: MENOS orderKeyDate: 20180417T000000 orderID: O11111 symbol: XYZ eventTimestamp: 20180417T153035.234456 aggregatedOrders: firmDesignatedID: CUST1234	Once an account number is established on T+1, Broker 1 reports the FDID to CAT in a New Order Supplement event. When reporting a New Order Supplement event to establish an FDID for an account, the <i>aggregatedOrders</i> field must not be populated. The <i>orderKeyDate</i> is the date and time that the Order Key for the related New Order event was generated, which is T. The <i>eventTimestamp</i> in the New Order Supplement event must match the <i>eventTimestamp</i> value reported on the New Order event.

5.1.2. Order is Entered in the Wrong Account

This scenario illustrates the CAT reporting requirements when an Industry Member places an order for a customer in the wrong account. In this scenario, the Industry Member receives a customer order and manually places the order for the incorrect customer account. The firm routes the order to an exchange for execution. The Industry Member reports the order to CAT with the FDID of the incorrect account. After the order is reported to CAT, the Industry Member realizes the error, and moves the shares to the correct account.

Industry Member Broker 1 is required to report:

- The receipt of the customer/client order with the FDID of the incorrect account (New Order event)
- The route of the customer/client order to the exchange (Order Route event)
- The correction of the FDID reported to CAT (New Order event with *actionType* 'COR')

Since the relevant events had already been reported to CAT, the Industry Member must correct the FDID by reporting a firm-initiated correction of the New Order event using an *actionType* of 'COR'. If the Industry Member had realized and corrected the error prior to submission, the Industry Member would be required to report the correct FDID in its New Order event.

5.1.3. Customer Requests a Change in FDID Prior to Allocation

This scenario illustrates the CAT reporting requirements when a customer requests a change in the account prior to allocation. In this scenario, the Industry Member receives a customer order with instructions to place the order in a specific account. The firm routes the order to an exchange for execution. The Industry Member reports the order to CAT with the FDID of the account instructed by the customer. After the order is reported to CAT, the customer realizes the incorrect account information was given, and the Industry Member moves the shares to the correct account as an accommodation to the customer.

Industry Member Broker 1 is required to report:

- The receipt of the customer/client order with the FDID of the account originally instructed by the customer (New Order event)
- The route of the customer/client order to the exchange (Order Route event)
- The correction of the FDID reported to CAT (New Order event with *actionType* 'COR' and *handlingInstructions* value 'CAC')

Since the relevant events had already been reported to CAT, the Industry Member must correct the FDID by reporting a firm-initiated correction of the New Order event using an *actionType* of 'COR'. The correction must contain a *handlingInstructions* value of 'CAC' to indicate that the account correction was initiated by the customer, and was not a firm error. If the Industry Member had processed the customer initiated account correction prior to submission, the Industry Member would be required to report the correct FDID in its New Order event.

6. Allocation Scenarios

This section illustrates reporting requirements when reporting Post-Trade Allocation events. These scenarios are applicable to equivalent equities and options order flows. Refer to Section 3.3 of the [CAT Reporting Technical Specifications for Industry Members](#), along with [Published Allocation Reporting guidance](#) for additional information.

6.1. Allocation Scenarios

6.1.1. Order is Booked Directly in a Customer Account at a Self-Clearing Broker-Dealer

This scenario illustrates the CAT reporting requirements when an order is received or originated directly into a customer's account at a self-clearing broker-dealer. The order could be received directly from the customer either online or as a result of a call to the broker-dealer; or a registered representative of the firm with discretion over the customer's account could originate an order for the customer using his/her discretion. Upon receipt/origination of the order, the broker-dealer routes the order to an exchange for execution. Upon execution, the self-clearing broker-dealer places the shares in the customer's account.

Industry Member Broker 1 is required to report:

- The receipt/origination of the customer order (New Order event)
- Route of the customer order to an exchange (Order Route event)
- The booking of executed shares into the customer's account (Post-Trade Allocation event)

Since Broker 1 is self-clearing, Broker 1 has the obligation to report the MEPA event to CAT.

6.1.2. Order Originated by Registered Rep with Discretion Over Multiple Customer Accounts at a Self-Clearing Broker-Dealer

This scenario illustrates the CAT reporting requirements when a registered representative of a self-clearing broker-dealer exercises discretion over multiple retail customer accounts and originates a single aggregated order that will be allocated to the specific customer accounts post trade. The order is routed to an exchange for execution. Shares are booked to a firm average price account until the sub-account allocations are made to the individual customer accounts.

Industry Member Broker 1 is required to report:

- The origination of the aggregated order by the registered rep (New Order event)
- Route of the aggregated order to an exchange (Order Route event)
- The booking of executed shares into each customer account (Post-Trade Allocation events)

Since Broker 1 is self-clearing, Broker 1 has the obligation to report MEPAs to CAT for each allocation to a customer account. The booking of shares related to the aggregated order into the firm average price account is not required to be reported since it is a firm owned or controlled account, but could be voluntarily reported.

#	Step	Reported Event	Comments
1	Registered representative of Broker 1 originates an order	<p><i>Broker 1 reports a New Order event</i></p> <p>type: MENO orderKeyDate: 20180417T000000 orderID: O12345 symbol: XYZ eventTimestamp: 20180417T153035.234456 deptType: A side: B price: 10.00 quantity: 1000 orderType: LMT timeInForce: DAY=20180417 tradingSession: REG custDspIntrFlag: false firmDesignatedID: AVG123 accountHolderType: V affiliateFlag: false negotiatedTradeFlag: false</p>	The FDID must represent the account in which the order was originated by the registered rep. In this scenario, the registered rep originated the order in a firm average price account, therefore the FDID on the New Order event must be the FDID of the firm average price account.

6.1.3. DVP Allocations by a Self-Clearing Broker-Dealer to Institutional Customer Accounts Held at a Different Firm

This scenario illustrates the CAT reporting requirements when an institution places an order with a self-clearing executing firm Broker 1. The institution gives instructions to DVP the shares to two different custodial broker-dealers (CSTA and CSTB). The institution provides allocation instructions directly to CSTA and CSTB for allocation to the final customer accounts at the custodian broker-dealers.

Industry Member Broker 1 is required to report:

- The receipt of the institutional customer order (New Order event)
- Route of the order to an exchange (Order Route event)
- The DVP of shares to CSTA and CSTB (Post-Trade Allocation events)

CSTA and CSTB are required to report:

- The booking of shares into the institutional customer's account (Post-Trade Allocation events)

6.1.4. Order is Booked Directly in a Customer Account at an Introducing Broker

This scenario illustrates the CAT reporting requirements when a customer with an account at an introducing broker places an order, and the introducing broker automatically routes the order to its clearing firm for further handling. The clearing firm routes the order to an exchange for execution.

Industry Member Introducing Broker is required to report:

- The receipt of the customer order (New Order event)
- Route of the order to the clearing firm (Order Route event)

The Clearing Firm is required to report:

- Receipt of the order from the Introducing Broker (Order Accepted event)
- Route of the order to an exchange (Order Route event)
- The booking of shares into the customer's account (Post-Trade Allocation event)

6.1.5. DVP Allocations by a Clearing Firm of a Non-Clearing Executing Broker

This scenario illustrates the CAT reporting requirements when an non-BD Investment Adviser (e.g., hedge fund, asset manager) is trading for both its pooled fund and a managed account and originates a single aggregated order that is routed to Industry Member non-clearing executing Broker 1. Upon execution by Broker 1, the Clearing Firm of Broker 1 (Clearing Firm) DVPs the shares to two different custodians based on the Investment Adviser's instructions, the Prime Broker for the Investment Adviser's pooled fund (PBA), and the non-broker custodian bank for the managed account (CSTB).

Industry Member Broker 1 is required to report:

- The receipt of the order from the Investment Advisor (New Order event)
- The execution of the order against its proprietary account (Trade event)

Clearing Firm is required to report:

- The DVP of shares to PBA and CSTB (Post-Trade Allocation events)

PBA is required to report:

- The booking of shares into the Investment Adviser's pooled fund (Post-Trade Allocation event)

CSTB is not required to report a Post-Trade Allocation event, as CSTB is not a broker-dealer. The requirements for this scenario would be the same if the Investment Adviser were a non-BD Investment Company

6.2. Allocation Amendment Scenarios

6.2.1. Allocation is Amended After Initial Booking

This scenario illustrates the CAT reporting requirements when an Industry Member amends an allocation after it is initially booked to the customer's account. In this scenario, an Industry Member allocates 500 shares to a customer. On the same day after the initial booking of shares to the customer account, the Industry Member determines that the customer should have been allocated 800 shares. The reporting of this scenario depends on whether the Industry Member's books and records reflect that the allocation to the customer was amended, or that the original allocation to the customer was cancelled and a new allocation was created.

Option 1:

In Option 1, the Industry Member initially allocates 500 shares to the customer. After the initial booking of shares to the customer account, the Industry Member determines that the customer should have been allocated 800 shares and amends the quantity of the existing customer allocation.

Industry Member Broker 1 is required to report:

- The booking of 500 shares into the customer's account (Post-Trade Allocation event)
- An amendment of the allocation to 800 shares (Amended Allocation event)

Option 2:

In Option 2, the Industry Member initially allocates 500 shares to the customer. After the initial booking of shares to the customer account, the Industry Member determines that the customer should have been allocated 800 shares. The Industry Member cancels the original allocation of 500 shares and books a new allocation for 800 shares to the customer's account.

Industry Member Broker 1 is required to report:

- The booking of the 500 share allocation to the customer's account (Post-Trade Allocation event)
- The cancellation of the original allocation (COR for the original Post-Trade Allocation event with the *cancelFlag* as 'true')
- The booking of a new 800 share allocation to the customer's account (Post-Trade Allocation event)

The requirements outlined in this scenario also apply if there is a change in FDID after the initial allocation occurs. Refer to Scenario 5.1.3 for reporting requirements when a customer requests a change to FDID prior to the initial allocation.

		correspondentCRD: newOrderFDID: CUS001 allocationInstructionTime: TIDType: SSN	

6.2.2. Allocation is Amended After Initial Booking then Cancelled

This scenario illustrates the CAT reporting requirements when an Industry Member amends an allocation after it is initially booked to the customer's account, then later cancels the allocation. In this scenario, an Industry Member allocates 500 shares to a customer. After the initial booking of shares to the customer account, the Industry Member determines that the customer should have been allocated 800 shares. Later, the Industry Member makes the determination to cancel the allocation.

The reporting of this scenario depends on the Industry Member's allocation process and how the amendments are reflected in the firm's books and records. The cancellation of an allocation can be reported to CAT using the *cancelFlag* and *cancelTimestamp* in the Post-Trade Allocation event or the Amended Allocation event, as illustrated in Options 1 and 2 below. The *cancelTimestamp* must reflect the time that the allocation was cancelled. Refer to Section 4.14 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

The same guidance outlined in this scenario would apply if the allocation was not amended before it was cancelled.

Option 1:

The cancellation of the allocation is reported to CAT using the *cancelFlag* and *cancelTimestamp* in the Post-Trade Allocation event. In this example, since the Industry Member was unable to capture the *cancelFlag* and *cancelTimestamp* in its original submission, this information must be captured as a correction to the Post-Trade Allocation event.

Industry Member Broker 1 is required to report:

- The booking of 500 shares into the customer's account (Post-Trade Allocation event)
- An amendment of the allocation to 800 shares (Amended Allocation event)
- The cancellation of the allocation (COR for the original Post-Trade Allocation event with the *cancelFlag* as 'true')

In accordance with [FAQ U14](#), the Industry member is required to report changes to CAT reportable attributes of an allocation after the original booking of shares/contracts to CAT regardless if they occur pre-settlement or post-settlement. The *cancelTimestamp* must reflect the time that the allocation was cancelled after it was previously amended. If the cancellation occurs after T+3 at 8AM, which is the deadline for timely corrections, Broker 1's COR will not be marked late if the *cancelTimestamp* is populated on the record.

3	Broker 1 cancels the allocation	<p><i>Broker 1 reports a COR for its original Post-Trade Allocation event with the cancelFlag as 'true'</i></p> <p>actionType: COR</p> <p>type: MEPA</p> <p>allocationKeyDate: 20180419T000000</p> <p>allocationID: A12345</p> <p>symbol: XYZ</p> <p>eventTimestamp: 20180419T200000</p> <p>cancelFlag: true</p> <p>cancelTimestamp: 20180421T110000</p> <p>quantity: 500</p> <p>price: 10.00</p> <p>side: B</p> <p>firmDesignatedID: CUS001</p> <p>institutionFlag: false</p> <p>tradeDate: 20180417</p> <p>settlementDate: 20180419</p> <p>allocationType: CUS</p> <p>DVPCustodianID:</p> <p>correspondentCRD:</p> <p>newOrderFDID: CUS001</p> <p>allocationInstructionTime:</p> <p>TIDType: SSN</p>	<p>The <i>eventTimestamp</i> in Broker 1's COR event must reflect the same timestamp as the original allocation.</p> <p>The <i>cancelTimestamp</i> must reflect the time that the allocation was cancelled after it was previously amended. If the cancellation occurs after T+3 at 8AM, which is the deadline for timely corrections, Broker 1's COR will not be marked late if the <i>cancelTimestamp</i> is populated on the record.</p>

Option 2:

The Industry Member reports the cancellation of the allocation to CAT using the *cancelFlag* and *cancelTimestamp* in the Amended Allocation event.

Reporting Option 2A ('NEW' Amended Allocation event with the *cancelFlag* as 'true')

Industry Member Broker 1 is required to report:

- The booking of 500 shares into the customer's account (Post-Trade Allocation event)
- An amendment of the allocation to 800 shares (Amended Allocation event)
- The cancellation of the allocation (Amended Allocation event with the *cancelFlag* as 'true')

When reporting the cancellation of the allocation to CAT as described in Option 2A, the *eventTimestamp* must reflect the date/time that the allocation amendment was processed, which is the same time that the allocation was cancelled as reflected in the *cancelTimestamp* field.

Reporting Option 2B ('COR' of Amended Allocation event with the *cancelFlag* as 'true')

Industry Member Broker 1 is required to report:

- The booking of 500 shares into the customer's account (Post-Trade Allocation event)

- An amendment of the allocation to 800 shares (Amended Allocation event)
- The cancellation of the allocation ('COR' for the last Amended Allocation event with the *cancelFlag* as 'true')

In this example, since the Industry Member was unable to capture the *cancelFlag* and *cancelTimestamp* in its original submission, this information may be captured as a correction to the Amended Allocation event.

When reporting the cancellation of the allocation to CAT as described in Option 2B, the *eventTimestamp* must reflect the date/time of the original Amended Allocation event submission, and the *cancelTimestamp* must reflect the time that the allocation was cancelled after it was previously amended. If the cancellation occurs after T+3 at 8AM, which is the deadline for timely corrections, Broker 1's 'COR' event will not be marked late if the *cancelTimestamp* is populated on the record.

6.2.3. Allocation is Amended then Reverted to the Original Terms and Conditions

This scenario illustrates the CAT reporting requirements when an Industry Member amends an allocation after it is initially booked to the customer's account, then later reverts the changes on the terms of the original booking. In this scenario, an Industry Member allocates 500 shares to a customer. After the initial booking of shares to the customer account, the Industry Member determines that the customer should have been allocated 800 shares. Later, the Industry Member later makes the determination that the allocation should not have been updated to 800 shares, and reverts to the original 500 share booking.

Industry Member Broker 1 is required to report:

- The booking of 500 shares into the customer's account (Post-Trade Allocation event)
- An amendment of the allocation to 800 shares (Amended Allocation event)
- An amendment of the allocation to 500 shares (Amended Allocation event)

Although the Industry Member reverted the changes that were made to the original booking, this must be captured as an Amended Allocation event reflecting the final details of the booking.

7. Error Correction Scenarios

This section illustrates reporting requirements when correcting an error in CAT. These scenarios are applicable to equivalent equities and options order flows. Refer to Section 7 of the [CAT Reporting Technical Specifications for Industry Members](#) and [Section P of the CAT FAQs regarding Feedback and Error Corrections](#) for additional information.

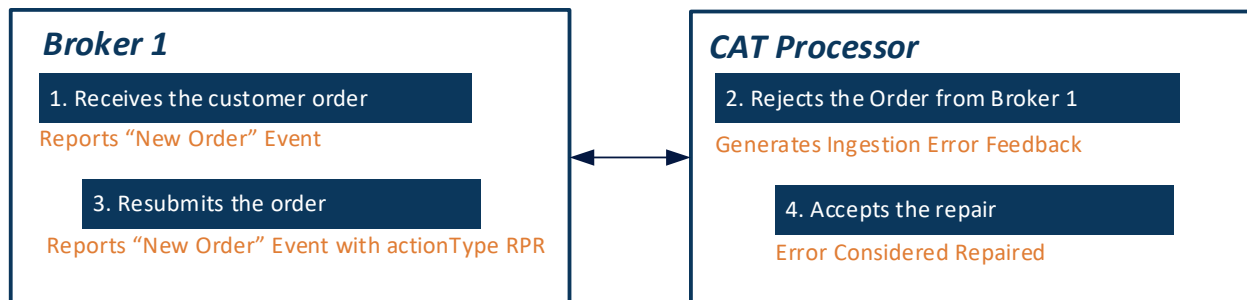

7.1. Correcting Ingestion Errors

7.1.1. Correcting an Error using Action Type of 'RPR'

This scenario illustrates the error feedback provided by the CAT Processor and the follow-up reporting requirements to CAT for an Industry Member that repairs an error using the Action Type of 'RPR'.

For this scenario, the following steps occur:

- Industry Member submits a New Order event that is subsequently rejected.
- The CAT Processor provides the error feedback to the Industry Member.
- The Industry Member corrects the error and resubmits to CAT.

Note that in the example below, only a subset of fields relevant to corrections have been included.

7.1.2. Correcting an Error using the Action Type of 'COR'

This scenario illustrates the error feedback provided by the CAT Processor and the follow-up reporting requirements to CAT for an Industry Member that repairs an error using the Action Type of 'COR'.

For this scenario, the following steps occur:

- Industry Member submits a New Order event that is subsequently rejected.
- The CAT Processor provides the error feedback to the Industry Member.
- The Industry Member corrects the error and resubmits to CAT.

Note that in the example below, only a subset of fields relevant to corrections have been included.

#	Step	Reported Event	Comments

4	CAT Processor accepts the repair.		The original error will be considered as repaired. The repaired event will be processed by CAT.

7.1.3. Firm Initiated Correction using Action Type of 'COR'

This scenario illustrates the firm initiated correction reporting requirements to CAT for an Industry Member that corrects an error using the Action Type of 'COR'.

For this scenario, the following steps occur:

- Industry Member submits a New Order event that is accepted.
- The Industry Member subsequently submits a correction to the *accountHolderType* field reported to CAT.

Note that in the example below, only a subset of fields relevant for corrections have been included.

#	Step	Reported Event	Comments
1	Broker 1 submits an order.	<i>Broker 1 reports a New Order event</i> actionType: NEW firmROEID: 20180501_M12360 type: MENO CATReporterIMID: BRK1 orderKeyDate: 20180501T153035.234456 orderID: O12345 symbol: XYZ eventTimestamp: 20180501T153035.234456	

#	Step	Reported Event	Comments
		accountHolderType: P	
2	Broker 1 order is accepted.		
3	The Industry Member submits a correction using the Action Type of 'COR'.	<i>Broker 1 resubmits the New Order event</i> actionType: COR errorROEID: firmROEID: 20180501_M12360 type: MENO CATReporterIMID: BRK1 orderKeyDate: 20180501T153035.234456 orderID: O12345 symbol: XYZ eventTimestamp: 20180501T153035.234456 accountHolderType: A	
4	CAT Processor accepts the correction.		The corrected event will be processed by CAT.

7.1.4. File Deletion

This scenario illustrates the reporting requirements to CAT for an Industry Member that submits a delete file instruction. After the firm has received the File Acknowledgement feedback, the file deletion instruction may only be used for files with data representing an event date that is prior to 8 am on T+4. All events contained within the original file for which the file deletion instruction was received must have an Action Type of NEW.

For this scenario, the following steps occur:

- Industry Member submits a New Order event that is subsequently rejected.
- The CAT Processor provides the error feedback to the Industry Member.
- The Industry Member submits a delete file instruction to CAT.

Note that in the example below, only a subset of fields relevant for corrections have been included.

#	Step	Reported Event	Comments
1	Broker 1 submits an order	<i>Broker 1 reports a New Order event</i> actionType: NEW firmROEID: 20180501_M12360 type: MENO CATReporterIMID: BRK1 orderKeyDate: 20180501T153035.234456 orderID: O12345 symbol: XYZ eventTimestamp: 20180501T153035.234456 accountHolderType: B fileName: SUBID_BRK1_20180501_OrderEvents_000123.json.bz2

4	CAT Processor marks all records in the file as deleted		All events included in the original file submission will be considered deleted. All associated errors will be considered as repaired.

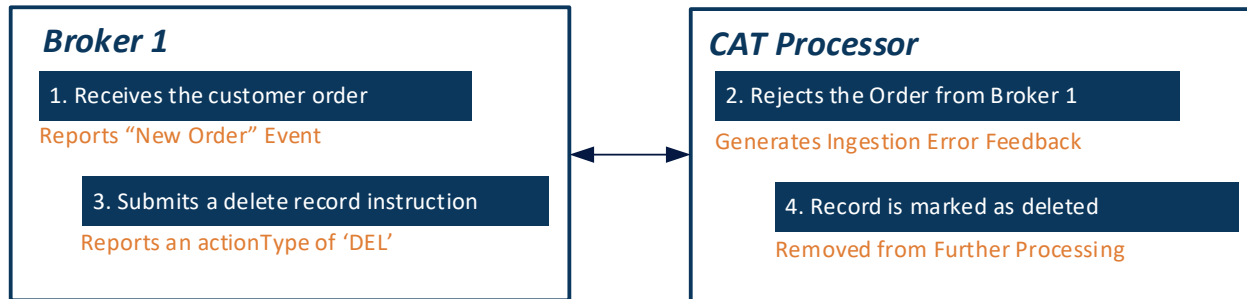

7.1.5. Deleting an Erroneous Record using Action Type of 'DEL'

This scenario illustrates the error feedback provided by the CAT Processor and the follow-up reporting requirements to CAT for an Industry Member that submits a record delete instruction.

For this scenario, the following steps occur:

- Industry Member submits a New Order event that is submitted and accepted.

- The CAT Processor provides the error feedback to the Industry Member.
- The Industry Member submits a delete record instruction to CAT.

Note that in the example below, only a subset of fields relevant for corrections have been included.

#	Step	Reported Event	Comments

4	CAT Processor marks the record as deleted		The original record will be considered as deleted. All associated errors will be considered as repaired.

7.1.6. Deleting a record with no Error Feedback using Action Type of 'DEL'

This scenario illustrates the follow-up reporting requirements to CAT for an Industry Member that submits a record delete instruction without receiving Error Feedback.

For this scenario, the following steps occur:

- Industry Member submits a New Order event that is accepted.
- The Industry Member submits a delete record instruction to CAT.

Note that in the example below, only a subset of fields relevant for corrections have been included.

#	Step	Reported Event	Comments
1	Broker 1 submits an order	<i>Broker 1 reports a New Order event</i> actionType: NEW firmROEID: 20180501_M12360 type: MENO CATReporterIMID: BRK1 orderKeyDate: 20180501T153035.234456 orderID: O12345 symbol: XYZ eventTimestamp: 20180501T153035.234456 accountHolderType: P

		firmROEID: 20180501_M12360	
4	CAT Processor marks the record as deleted.		The original record will be considered as deleted. All associated errors will be considered as repaired.

7.1.7. Correcting an Unreadable Event using Action Type of 'RPR'

This scenario illustrates the error feedback provided by the CAT Processor and the follow-up reporting requirements to CAT for an Industry Member that repairs an error using the Action Type of 'RPR' when the submitted record is unreadable by CAT.

For this scenario, the following steps occur:

- Industry Member submits a New Order that is subsequently rejected because it was malformed and could not be parsed.
- The CAT Processor provides the error feedback to the Industry Member including the Error Code.
- The Industry Member corrects the error and resubmits to CAT.

Note that in the example below, only a subset of fields relevant for corrections have been included.

#	Step	Reported Event	Comments
1	Broker 1 submits an order	<i>Broker 1 reports an unreadable record.</i>	
2	Broker 1 receives feedback from the CAT Processor	<i>Broker 1 receives feedback</i>	Rejected with Error Code 2134 - Invalid JSON or CSV format The record cannot be parsed, hence the only fields that will be returned will be <i>errorCode</i> , <i>actionType</i> and <i>errorROEID</i> .
3	The Industry Member repairs the record using the Action Type of 'RPR' and resubmits.	<i>Broker 1 resubmits the event</i> actionType: RPR errorROEID: 123456789 firmROEID: 20180501_M12360	

#	Step	Reported Event	Comments
		type: MENO CATReporterIMID: BRK1 orderKeyDate: 20180501T153035.234456 orderID: O12345 symbol: XYZ eventTimestamp: 20180501T153035.234456 accountHolderType: P	
4	CAT Processor accepts the repair.		The original error will be considered as repaired. The repaired event will be processed by CAT.

7.2. Correcting Linkage Discovery Errors

7.2.1. Correcting an Intrafirm Linkage Error using Action Type of 'NEW'

This scenario illustrates the error feedback provided by the CAT Processor and the follow-up reporting requirements to CAT for an Industry Member that repairs an intra-firm linkage error using the action type of 'NEW'. This scenario applies to error code 3501 when the originating event does not exist in CAT.

In such instances, the reporting of a 'RPR' or 'COR' is not applicable since the unlinked event must remain. The error is resolved by reporting the missing event.

For this scenario, Industry Member Broker 1 reported an Order Cancel event, without an associated origination event:

- Order Cancel event submitted by Broker 1 is unlinked due to Order Key not found.
- The CAT Processor provides the intra-firm linkage error feedback to the Industry Member.
- The Industry Member submits the missing event to the CAT Processor, which corrects the linkage error.

Note that in the example below, only a subset of fields relevant for corrections have been included.

3	The Industry Member repairs the unlink record using the Action Type of 'NEW'.	<i>Broker 1 submits the New Order event</i> actionType: NEW firmROEID: 20180417_Q12378 type: MENO CATReporterIMID:BRK1 orderKeyDate: 20180417T000000 orderID: Z23456 symbol: XYZ quantity: 1000	The late reported MENO event is NOT required to include the errorROEID or firmROEID of the associated linkage error.
5	CAT Processor accepts the unlink repair.		During processing, CAT will make the linkage and the original linkage error will be considered repaired.

7.2.2. Correcting an Interfirm Linkage Error using Action Type of 'RPR'

This scenario illustrates the error feedback provided by the CAT Processor and the follow-up reporting requirements to CAT for an Industry Member that repairs an interfirm linkage error using the Action Type of 'RPR'.

For this scenario, the following events occur:

- Order Route event submitted by Broker 1 is unlinked because a matching *routedOrderID* cannot be found
- The CAT Processor provides the unlinked error feedback to the Industry Member.
- The Industry Member corrects the error and resubmits to CAT.

Note that in the example below, only a subset of fields relevant for corrections have been included.

#	Step	Reported Event	Comments
1	Broker 1 routes order to Broker 2.	<p><i>Broker 1 reports an Order Route event</i></p> <p> actionType: NEW firmROEID: 20180417_Z12360 type: MEOR orderKeyDate: 20180417T000000 eventTimestamp: 20180417T153035.234556 symbol: XYZ senderIMID: 123:FRMA destination: 456:FRMB orderID: O23456 routedOrderID: AO222 </p>

5	CAT Processor accepts the unlink repair.		During processing, CAT will make the linkage and BOTH of the original linkage errors will be considered repaired.

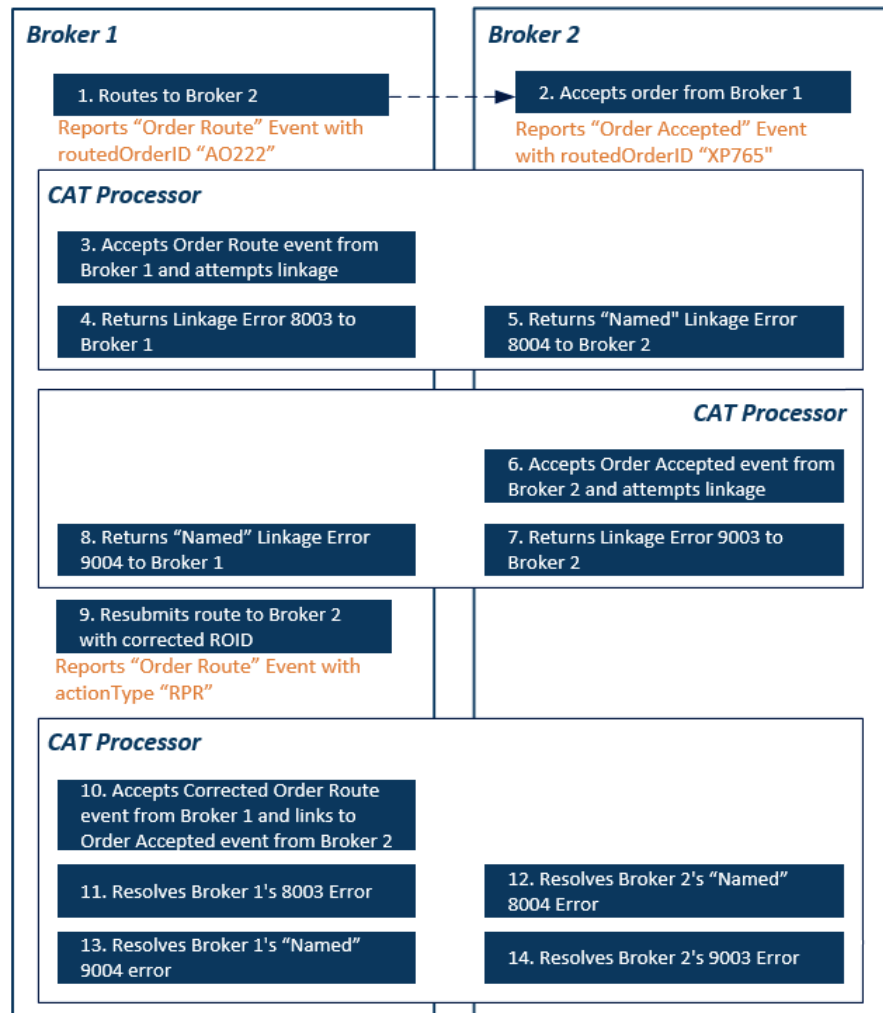

7.2.3. Correcting an Interfirm Linkage Error using Action Type of 'RPR'

This scenario illustrates the error feedback provided by the CAT Processor and the follow-up reporting requirements to CAT for an Industry Member that repairs an interfirm linkage error using the Action Type of 'RPR'.

For this scenario, the following events occur:

- Order Route event submitted by Broker 1 is unlinked to Order Accepted event submitted by Broker 2 because a matching *routedOrderID* cannot be found
- The CAT Processor returns unlinked error feedback to the reporting parties and unlinked "named" error feedback to the "named" parties
- Broker 1 corrects the error in the *routedOrderID* and resubmits to CAT

- The CAT Processor links the Order Route event resubmitted by Broker 1 to the Order Accepted event reported by Broker 2 and resolves the errors

Note that in the example below, only a subset of fields relevant for corrections have been included.

8	CAT Processor accepts the unlink repair and resolves linkage errors		During processing, CAT will make the linkage and the 8003, 8004, 9003 and 9004 errors will be considered repaired.

7.2.4. Correcting an Interfirm Linkage Error by Submitting the Missing Event

This scenario illustrates the error feedback provided by the CAT Processor and the follow-up reporting requirements to CAT for an Industry Member that repairs an interfirm linkage error by reporting the missing event.

For this scenario, the following events occur:

- Order Route event submitted by Broker 1 is unlinked, as no Order Accepted event was submitted by Broker 2
- The CAT Processor returns unlinked error feedback to Broker 1 and “named” feedback to Broker 2
- Broker 2 submits the related Order Accepted event to CAT
- The CAT Processor links the Order Route event submitted by Broker 1 to the Order Accepted event reported by Broker 2 and resolves the errors

Note that in the example below, only a subset of fields relevant for corrections have been included.

#	Step	Reported Event	Comments

5	CAT Processor links the record from Broker 2 and repair and resolves linkage errors		During processing, CAT will make the linkage and the 8003 and 8004 errors will be considered repaired.

7.2.5. Interfirm Linkage Warning for a Record Reported Early to CAT

This scenario illustrates the feedback provided by the CAT Processor and the follow-up reporting requirements to CAT for an Industry Member that reports a record to CAT prior to the due date.

For this scenario, the following events occur:

- Order Route event submitted by Broker 1 is reported prior to the due date and is unlinked, as the Order Accepted event has not yet been submitted by Broker 2
- The CAT Processor returns a warning to Broker 1 that is not repairable
- Broker 2 submits the related Order Accepted event to CAT on the due date
- The CAT Processor links the Order Route event submitted by Broker 1 to the Order Accepted event reported by Broker 2

Note that in the example below, only a subset of fields relevant for corrections have been included.

#	Step	Reported Event	Comments
1	Broker 1 reports route to Broker 2 before the due date	Broker 1 reports an <i>Order Route</i> event actionType: NEW firmROEID: 20180417_Z12360 type: MEOR orderKeyDate: 20180417T000000 orderID: O23456 symbol: XYZ eventTimestamp: 20180417T153035.234556

4	CAT Processor links the record from Broker 2 to the record from Broker 1		No further action is required by Broker 1, since the 897 Warning is not repairable

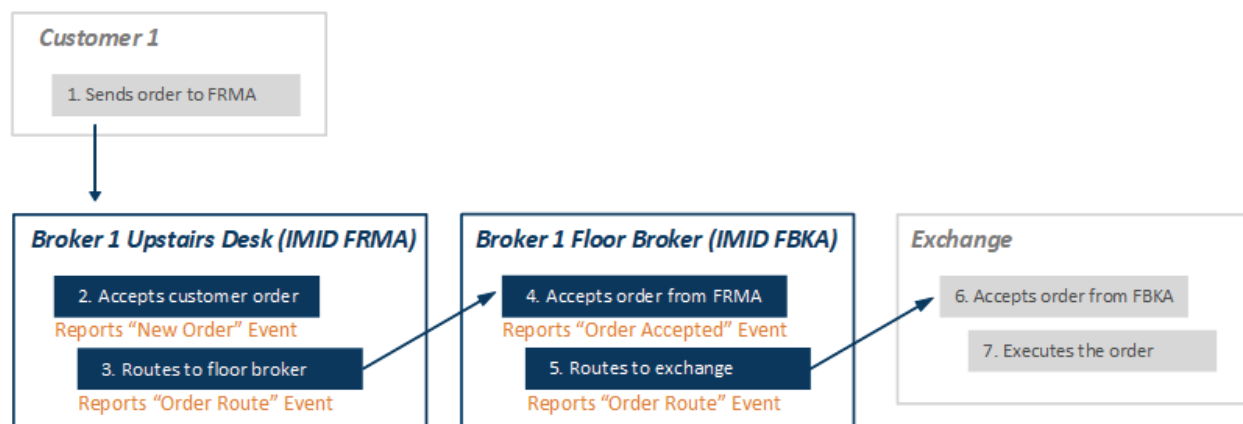

8. Floor Broker Scenarios

8.1. NYSE Floor Broker Scenarios

This section illustrates the CAT reporting requirements for NYSE Floor Brokers.

8.1.1. Order Routed to a Floor Broker Within the Same Broker-Dealer

This scenario illustrates the CAT reporting requirements when an Industry Member receives a customer order, and further routes the customer order to a floor broker within the same broker-dealer that uses a separate IMID. While both parties belong to the same Industry Member, Broker 1 maintains a separate IMID for its upstairs desk and its floor broker. Upon receipt of the order, the floor broker further routes the order to the exchange for execution.

Industry Member Broker 1's upstairs desk (FRMA) is required to report:

- The receipt of the order from the customer (New Order event)
- The route of the order to its floor broker (Order Route event)

Industry Member Broker 1's floor broker (FBKA) is required to report:

- The receipt of the order from Broker 1's upstairs desk (Order Accepted event)
- The route of the order to the exchange (Order Route event)

Since Broker 1 maintains separate IMIDs for its floor broker and its upstairs desk, Broker 1 is required to report an MEOR reflecting a route to the floor broker, not an MEIR. Refer to [CAT FAQ L1](#) for additional information on equity floor broker reporting.

8.1.3. Floor Broker Routes an Order to a Floor Broker at Another Broker-Dealer

This scenario illustrates the CAT reporting requirements when a floor broker routes an order to a floor broker at another Broker-Dealer. In this scenario, Industry Member Broker 1 receives a customer order, and further routes the customer order to a floor broker within the same broker-dealer that uses a separate IMID. Upon receipt of the order, the floor broker routes the order to Industry Member Broker 2's floor broker. Industry Member Broker 2's floor broker routes the order to the exchange for execution.

Industry Member Broker 1's upstairs desk (FRMA) is required to report:

- The receipt of the order from the customer (New Order event)
- The route of the order to its floor broker (Order Route event)

Industry Member Broker 1's floor broker (FBKA) is required to report:

- The receipt of the order from Broker 1's upstairs desk (Order Accepted event)
- The route of the order to Broker 2's floor broker (Order Route event)

Industry Member Broker 2's floor broker (FBKB) is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The route of the order to the exchange (Order Route event)

Refer to [CAT FAQ L1](#) for additional information on equity floor broker reporting.

8.1.4. Floor Broker Routes an Order to an Exchange Operated Algorithm

This scenario illustrates the CAT reporting requirements when a floor broker receives an order and routes the order to an exchange operated algorithm. In this scenario, Industry Member Broker 1 receives a customer order, and further routes the customer order to a floor broker within the same broker-dealer that uses a separate IMID.

Upon receipt of the order, the floor broker further routes the order to an exchange operated algorithm. The algorithm routes the order to the exchange for execution. The exchange operated algorithm is considered to be a separate department or desk of Broker 1's floor broker for the purposes of reporting to CAT.

Industry Member Broker 1's upstairs desk (FRMA) is required to report:

- The receipt of the order from the customer (New Order event)
- The route of the order to its floor broker (Order Route event)

Industry Member Broker 1's floor broker (FBKA) is required to report:

- The receipt of the order from Broker 1's upstairs desk (Order Accepted event)
- The internal route of the order to the exchange operated algorithm (Order Internal Route Accepted event)
- The route of the order to the exchange (Order Route event)

The floor broker's route to the exchange operated algorithm is required to be reported as an MEIR event with a *handlingInstructions* value of "FBA". Refer to [CAT FAQ L1](#) for additional information on equity floor broker reporting.

8.1.5. Floor Broker Routes an Order to an Algorithm Operated by Another Broker-Dealer

This scenario illustrates the CAT reporting requirements when a floor broker receives an order and routes the order to a third party algorithm operated by another broker-dealer. In this scenario, Industry Member Broker 1 receives a customer order, and further routes the customer order to a floor broker within the same broker-dealer that uses a separate IMID.

Upon receipt of the order, the floor broker routes the order to a third party algorithm operated by another broker-dealer. The third party algorithm, which is operated by a registered broker-dealer, routes part of the order to the NYSE for execution and the rest of the order to an away exchange.

Industry Member Broker 1's upstairs desk (FRMA) is required to report:

- The receipt of the order from the customer (New Order event)
- The route of the order to its floor broker (Order Route event)

Industry Member Broker 1's floor broker (FBKA) is required to report:

- The receipt of the order from Broker 1's upstairs desk (Order Accepted event)
- The route of the order to the third party algorithm (Order Route event)

The broker-dealer operating the algorithm is required to report:

- The receipt of the order (Order Accepted event)
- The partial route of the order to NYSE (Order Route event)
- The partial route of the order to an away market (Order Route event)

In this scenario, the reporting requirements for the third party algorithm are the same if algorithm is acting as a broker-dealer or acting solely as a technology provider. Refer to [CAT FAQ L1](#) for additional information on equity floor broker reporting.

8.2. Cboe Floor Broker Scenarios

This section illustrates the CAT reporting requirements for Cboe Floor Brokers.

8.2.1. Cboe Options Floor Broker Receives and Routes Order to Cboe Options Matching Engine for Further Handling and Execution

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 receives a simple electronic options order from a customer, and routes the order through the Cboe Options exchange systems to an Industry Member Floor Broker.

The Floor Broker then determines to route the order through the Cboe Options exchange systems to the exchange matching engine so that the order can electronically trade or book. Once there, the order is fully executed via the exchange matching engine. Note that in this scenario “Broker 1” could be an Industry Member located off or on the Cboe Options exchange trading floor, including a floor broker.

Industry Member Broker 1 is required to report:

- The receipt of the order from the customer (New Option Order event)
- The route of the order to the exchange (Option Order Route event)

The MOOR event must also include *handlingInstructions* values 'DIR' (Directed Orders) and 'FB' (Cboe Options Floor Broker) to denote the route to Floor Broker.

Industry Member Floor Broker is required to report:

- The receipt of the order from the exchange (Option Order Accepted event)
- The route of the order to the exchange to electronically trade or book (Option Order Route event must have a *timeInForce* value that is not 'IOR' (Immediate or Return))

Cboe Options exchange is required to report as outlined in the CAT Reporting Technical Specifications for Plan Participants.

8.2.2. Cboe Options Floor Broker Receives and Routes an Order to Exchange Matching Engine with Instructions to Return any Unexecuted Portion to the Floor Broker

This scenario illustrates the CAT reporting requirements when a customer order is received manually by an Industry Member Broker 1. The order is systematized by Broker 1 and electronically routed through the Cboe Options exchange systems to an Industry Member Floor Broker.

The Floor Broker then determines to route the order through the Cboe Options exchange systems to the exchange matching engine with instructions to return to the floor broker any remainder of the order that is not immediately executed. The order is then partially executed via the exchange matching engine, and the remainder of the order is returned to the floor broker for further handling and execution in open outcry.

Note that in this scenario “Broker 1” could be an Industry Member located off or on the Cboe Options exchange trading floor, including a floor broker.

Industry Member Broker 1 is required to report:

- The route of the order to the exchange (Option Order Route event)
The MOOR event must also include *handlingInstructions* values 'DIR' (Directed Orders) and 'FB' (Cboe Options Floor Broker) to denote the route to Floor Broker.

Industry Member Floor Broker is required to report:

- The receipt of the order from the exchange (Option Order Accepted event)
- The route of the order to the exchange to electronically trade immediately and return any remainder (Option Order Route event with a *timeInForce* value of 'IOR')

Cboe Options exchange is required to report as outlined in the CAT Reporting Technical Specifications for Plan Participants.

8.2.3. Industry Member Cancels a Route to a Cboe Options Floor Broker

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 receives a simple electronic options order from a customer, and routes the order through the Cboe Options exchange systems to an Industry Member Floor Broker. Broker 1 then determines to cancel the route that was sent to the Floor Broker, and directs the route cancel instruction through the exchange machine engine to Floor Broker. Floor Broker cancels the order on its books and records, and subsequently cancels the order on the matching engine.

In this scenario, the order remains open on Broker 1's books and records for further handling.

Note that in this scenario "Broker 1" could be an Industry Member located off or on the Cboe Options exchange trading floor, including a floor broker.

Industry Member Broker 1 is required to report:

- The receipt of the order from the customer (New Option Order event)
- The route of the order to the exchange (Option Order Route event)

The MOOR event must also include *handlingInstructions* values 'DIR' (Directed Orders) and 'FB' (Cboe Options Floor Broker) to denote the route to Floor Broker.

- The cancellation of the Route to the Floor Broker (Option Route Cancelled event)

Industry Member Floor Broker is required to report:

- The receipt of the order from the exchange (Option Order Accepted event)
- The cancellation of the order (Option Order Cancelled event)

Cboe Options exchange is required to report as outlined in the CAT Reporting Technical Specifications for Plan Participants.

8.2.4. Cboe Options Floor Broker Manually Trades an Options Order in Open Outcry

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 receives a simple electronic options order from a customer, and directs the order through the Cboe Options exchange systems to an Industry Member Floor Broker. Floor Broker represents the order to the crowd in open outcry, and Market Maker 1 trades against the order (i.e., the order is manually executed by the floor broker with Market Maker 1 in open outcry). The execution is then communicated to the exchange for trade reporting.

Note that in this scenario “Broker 1” could be an Industry Member located off or on the Cboe Options exchange trading floor, including a floor broker.

Industry Member Broker 1 is required to report:

- The receipt of the option order from the customer (New Option Order event)
- The route of the order to the exchange (Option Order Route event)

The MOOR event must also include *handlingInstructions* values 'DIR' (Directed Orders) and 'FB' (Cboe Options Floor Broker) to denote the route to Floor Broker.

Industry Member Floor Broker is required to report:

- The receipt of the order from the exchange (Option Order Accepted event)

As part of defining the reporting requirements for manual events in Phase 2d, the Plan Participants are evaluating how Floor Broker and Market Maker 1 will be required to report open outcry verbal/manual options trade and trade reporting events linked to the Cboe Options exchange's Simple Option Trade event.

Cboe Options exchange is required to report as outlined in the CAT Reporting Technical Specifications for Plan Participants.

7	Floor Broker represents the order in the crowd and trades it in the crowd with Market Maker 1. Floor Broker and Market Maker 1 both subsequently report their respective sides of the execution to Cboe Options exchange	NA	In Phase 2b, Floor Broker and Market Maker 1 are not required to report open outcry verbal/manual executions. Note that the representation of the order (e.g., the 'Represent' button on Floor Broker's PAR Workstation) is not a CAT reportable event.
8	Cboe Options exchange receives trade reports from Floor Broker and Market Maker 1 for trade reporting	<i>Exchange reports a Participant Simple Option Trade event</i>	

8.2.5. Cboe Options Floor Broker Manually Routes the Equity Leg of a Complex Option Order to another Industry Member

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 receives a complex order with an equity buy leg from a customer, and directs the order through the Cboe Options exchange systems to an Industry Member Floor Broker.

The Floor Broker represents the complex order with the equity leg to the crowd, and trades the complex order with Market Maker 1 at a net price, with the execution of the options legs at a given price being contingent on the execution of the equity leg at a given price. Upon determining the price of the equity leg, both Floor Broker and Market Maker 1 each separately route their respective sides of the equity leg to Broker 2, who crosses the equity orders.

This scenario illustrates the requirements for reporting the equity leg of a complex order, and does not include reporting requirements for the option legs. Note that in this scenario “Broker 1” could be an Industry Member located off or on the Cboe Options exchange trading floor, including a floor broker.

Industry Member Broker 1 is required to report:

- The receipt of the complex order from the customer (New Multi-Leg Order event)
- The route of the complex order to the exchange (Multi-Leg Order Route event with *handlingInstructions* ‘DIR’ (Directed Orders) and ‘FB’ (Cboe Options Floor Broker) to denote the route to Floor Broker.

Industry Member Floor Broker is required to report:

- The receipt of the complex order from the exchange (Multi-Leg Order Accepted event)
- The route of the equity leg buy order to Broker 2 (Order Route event with *handlingInstructions* ‘OPT’)

Industry Member Market Maker 1 is required to report:

- A new proprietary complex order (New Multi-Leg Order event)
- The route of the equity leg sell order to Broker 2 (Order Route event with *handlingInstructions* ‘OPT’)

Industry Member Broker 2 is required to report:

- The receipt of the buy order from Floor Broker (Order Accepted event with *handlingInstructions* ‘OPT’)
- The receipt of the sell order from Market Maker 1 (Order Accepted event with *handlingInstructions* ‘OPT’)
- The execution of the orders from Floor Broker and Market Maker 1 (Trade event)

Cboe Options exchange is required to report as outlined in the CAT Reporting Technical Specifications for Plan Participants.

As part of defining the reporting requirements for manual events in Phase 2d, the Plan Participants are evaluating how Floor Broker and Market Maker 1 will be required to report open outcry verbal/manual options trade and trade reporting events linked to the Cboe Options exchange’s Simple Option Trade event.

		orderKeyDate: 20180417T000000 orderID: ORD123 side: B sellDetails: orderKeyDate: 20180417T000000 orderID: ORD456 side: SL	

In the scenario above, upon determining the price of the equity leg, both Floor Broker and Market Maker 1 each separately route their respective sides of the equity leg to Broker 2, who crosses the equity orders. Another common scenario that occurs is one where Market Maker 1 would ask Floor Broker to route Market Maker 1's side of the equity leg to Broker 2 on Market Maker 1's behalf. In that scenario, Floor Broker would route both Floor Broker's buy-side equity leg and Market Maker 1's sell-side equity leg to Broker 2 for execution. In that scenario, if everything else about the fact pattern remains the same, the following events would be reported to CAT:

Industry Member Broker 1 is required to report:

- The receipt of the complex order from the customer (New Multi-Leg Order event)
- The route of the complex order to the exchange (Multi-Leg Order Route event with *handlingInstructions* 'DIR' and 'FB')

Industry Member Floor Broker is required to report:

- The receipt of the complex order from the exchange (Multi-Leg Order Accepted event)
- The receipt of the complex order from Market Maker 1 (Multi-Leg Order Accepted event)
- The route of the equity leg buy order to Broker 2 (Order Route event with *handlingInstructions* 'OPT')
- The route of the equity leg sell order to Broker 2 (Order Route event with *handlingInstructions* 'OPT')

Industry Member Market Maker 1 is required to report:

- A new proprietary multi-leg order (New Multi-Leg Order event)
- The route of the multi-leg order to Floor Broker (Multi-Leg Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the equity leg buy order from Floor Broker (Order Accepted event with *handlingInstructions* 'OPT')

- The receipt of the equity leg sell order from Floor Broker (Order Accepted event with *handlingInstructions* 'OPT')
- The execution of the orders from Floor Broker (Trade event)

Cboe Options exchange is required to report as outlined in the CAT Reporting Technical Specifications for Plan Participants.
